Status: Submitted

Due Date: 11/29/2026

Last Updated: 11/10/2026

Hospital Web Address for Equity Report: https://www.sutterhealth.org/sh-equity-report

Hospital System Description: Sutter Health is a not-for-profit healthcare system dedicated to providing comprehensive care throughout California. Guided by a commitment to advancing innovative patient care, healthy outcomes and community partnerships, Sutter is pursuing a bold plan to reach more people and make excellent healthcare more connected, accessible and personalized.

Today, its dedicated team of more than 64,000 employees and clinicians and 15,000+ affiliated physicians care for more than 3.6 million patients and are united by a shared focus on expanding care to serve more patients. Sutter delivers exceptional and affordable care through its hospitals, medical groups, ambulatory surgery centers, urgent care clinics, telehealth, home health and hospice services.

Recognized nationally for its workplace culture, Sutter Health has been named to Modern Healthcare’s 2026 Best Places to Work in Healthcare list and Forbes’ America’s Best Employers for Company Culture 2026. Learn more about how Sutter Health is transforming care at sutterhealth.org and vitals.sutterhealth.org.

Overview

Health and Safety Code Sections 127370-127376 require the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to

collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Health and Safety Code Sections 127370-127376, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Structural Measures

Joint Commission Accreditation

Hospital systems are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:
https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital system health equity activities.

Yes

Provide documentation of hospital system policy prohibiting discrimination.

Yes

Table 1. Summary of preferred languages reported by patients. This data is aggregated across all hospital types within the system, if applicable (General Acute Care, Acute Psychiatric and Children's hospitals).

Languages	Number of patients who report preferred language	Total number of patients who were asked to report their preferred language	Percentage of patients by preferred language group (%)
English Language	1176202	1362438	86.3
Spanish Language	95120	1362438	7
Asian Pacific Islander Languages	55245	1362438	4.1
Middle Eastern Languages	9954	1362438	0.7
American Sign Language	506	1362438	0
Other Languages	25411	1362438	1.9

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

Hospital systems are required to report on rates of screenings and intervention rates among patients 18 years or older for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. This data is aggregated across all hospital types within the system, if applicable (General Acute Care, Acute Psychiatric and Children's hospitals). For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser: https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

71869

Total number of patients admitted to a hospital inpatient stay who were 18 years or older on the date of admission

98599

Percentage of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission and screened for all five HRSNs

72.9

Table 2. Screen positive rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of patients who screened positive	Screen positive rate (%)	Number of patients who screened positive and received intervention	Intervention Rate (%)
Food Insecurity	9813	13.7	3374	4.7
Housing Instability	5343	7.4	1690	2.4
Transportation Problems	8800	12.2	3097	4.3
Utility Difficulties	15981	22.2	5728	8
Interpersonal Safety	1267	1.8	403	0.6

Core Quality Measures

Core Quality Measures for Hospital Systems

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. This data is aggregated across all General Acute Care, Acute Psychiatric hospitals within the system, if applicable. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser: https://hcahpsonline.org/en/survey-instruments/

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, hospital systems provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

20211

Total number of respondents to HCAHPS Question 19

21341

Rate of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

94.7

Total number of patients surveyed on HCAHPS Question 19

21837

Response rate, or the percentage of people who responded to HCAHPS Question 19

97.7

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Rate of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	71	78	91	80	97.5
Asian	2147	2235	96.1	2283	97.9
Black or African American	1028	1112	92.4	1151	96.6
Hispanic or Latino	2869	3005	95.5	3078	97.6
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)	276	295	93.6	297	99.3
Native Hawaiian or Pacific Islander	104	111	93.7	113	98.2
White	12774	13503	94.6	13807	97.8

Additional gender category or other	14920	15764	94.6	16188	97.4
Not disclosed	Masked	Masked	Masked	Masked	Masked

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. Hospital systems are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital?"

17330

Total number of respondents to HCAHPS Question 17

19300

Rate of respondents who responded "yes" to HCAHPS Question 17

89.8

Total number of people surveyed on HCAHPS Question 17

21837

Response rate, or the percentage of people who responded to HCAHPS Question 17

88.4

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Rate of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	63	72	87.5	80	90
Asian	1842	2023	91.1	2283	88.6
Black or African American	892	1010	88.3	1151	87.7

Agency for Healthcare Research and Quality (AHRQ) Indicators

Hospital systems are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. Hospital systems report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. This data is aggregated across all General Acute Care, Acute Psychiatric hospitals within the system, if applicable. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

199

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

7111

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

28

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients of any age with serious treatable complications. Hospital systems report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. This data is aggregated across all General Acute Care hospitals within the system. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

Number of in-hospital deaths among patients aged 18-89 years old or obstetric patients with serious treatable complications

227

Total number of surgical discharges among patients aged 18-89 years old or obstetric patients

1846

Rate of in-hospital deaths per 1,000 surgical discharges, among patients aged 18-89 years old or obstetric patients with serious treatable complications

123

Table 6. Death Rate among Surgical Inpatients with Serious Treatable Complications by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC). This data is aggregated across all General Acute Care hospitals within the system.

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. Hospital systems report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser: https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications

Number of NTSV patients with Cesarean deliveries

2090

Total number of nulliparous patients delivered of a live term singleton newborn in vertex presentation

8988

Rate of nulliparous women with a term, singleton baby in a vertex position delivered by cesarean section

23.3

Table 7. Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of NTSV patients with cesarean deliveries	Total number of NTSV patients	Rate of NTSV patients with Cesarean deliveries (%)
American Indian or Alaska Native	Masked	37	Masked

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 100 deliveries by patients with previous Cesarean deliveries. Hospital systems report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf

Number of vaginal deliveries among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

575

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

3105

Rate of vaginal deliveries per 100 deliveries by patients with previous Cesarean deliveries

18.5

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. Hospital systems report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

15209

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

21783

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

69.8

Table 9. Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

Hospital systems are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser: https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient admissions across the system's general acute care, children's, and acute psychiatric hospitals which occurs within 30 days of the discharge date of an eligible index admission

8753

Total number of inpatient admissions across the system's general acute care, acute psychiatric, and children's hospitals, subject to the age rules defined for each hospital type

130704

Rate of hospital system-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge

6.7

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. This data is aggregated across all hospital types within the system, if applicable (General Acute Care, Acute Psychiatric and Children's hospitals).

Race and/or Ethnicity	Number of inpatient readmissions	Total number of admitted patients	Readmission rate (%)
American Indian or Alaska Native	34	439	7.7
Asian	831	11983	6.9

CMS Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program Screening for Metabolic Disorders

Hospital systems are required to report the rate of structured screenings for metabolic disorders among patients with a prescription for one or more routinely scheduled antipsychotic medications. The structured screenings must contain (1) body mass index (BMI), (2) blood pressure, (3) blood glucose or HbA1c, and (4) a lipid panel, and be completed at least once in the 12 months prior to the patient's date of discharge. The rate of patient screenings for metabolic disorders are stratified

by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. This data is aggregated across all Acute Psychiatric hospitals within the system. For more information on the structured screenings for metabolic disorders, please see page 92 of the report by visiting the following link by copying and pasting the URL into your web browser: https://www.qualityreportingcenter.com/globalassets/2021/05/iqr/ipfqr_programmanualv7.0_final508.pdf

Number of patients who received a metabolic screening in the 12 months prior to discharge, either prior to or during the index IPF stay

267

Number of discharges from an IPF during the measurement period with a prescription for one or more routinely scheduled antipsychotic medications

276

Rate of patients discharged from an IPF with a prescription for one or more routinely scheduled antipsychotic medications for which a structured metabolic screening was completed in the 12 months prior to discharge, either prior to or during the index IPF stay

96.7

Table 15. Rate of patients who received structured metabolic screenings with a prescription for a routinely scheduled antipsychotic medication by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

The Joint Commission SUB-3: Alcohol and Other Drug Use Disorder Treatment Provided or Offered at Discharge

Hospital systems are required to report the rate of patients who are identified with alcohol or drug use disorder who received or refused at discharge a prescription for FDA-approved medications for alcohol or drug use disorder, or who receive or refuse a referral for addictions treatment. The rate of treatment provided or offered at discharge are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. This data is aggregated across all Acute Psychiatric hospitals within the system. For more information on the rate calculation and inclusion/exclusion criteria, please visit the following link by copying and pasting the URL into your web browser: https://manual.jointcommission.org/releases/TJC2024B/MIF0221.html

Health Equity Plan

All hospital systems report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 18. Top 10 disparities and their rate ratio values.

Rank	Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
1	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Co-Occurring Disorder)	Age (excluding maternal measures)	50 to 64	14.6	18 to 34	3.3	4.5
2	Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Race and/or Ethnicity	Asian	36.6	American Indian or Alaska Native	0	3.7
3	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Age (excluding maternal measures)	50 to 64	8.7	18 to 34	2.3	3.7
4	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	9	18 to 34	2.4	3.7
5	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Age (excluding maternal measures)	65 and older	8.4	18 to 34	2.3	3.6
6	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	8.5	18 to 34	2.4	3.6
7	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Co-Occurring Disorder)	Age (excluding maternal measures)	65 and older	11.5	18 to 34	3.3	3.5
8	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Mental Health Disorder)	Age (excluding maternal measures)	50 to 64	9.9	18 to 34	3.2	3.1
9	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Mental Health Disorder)	Age (excluding maternal measures)	65 and older	9.9	18 to 34	3.2	3.1
10	Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Race and/or Ethnicity	Black or African American	28.9	American Indian or Alaska Native	0	3

Plan to address disparities identified in the data

Sutter Health's health equity plan is greater than 5,000 characters. It has been submitted to HCAi and published to Sutter's website as a supplemental PDF file.

Performance in the priority area

Hospital systems are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Sutter Health assesses Person Centeredness via the methods specified in each of its hospital's HCAi Health Equity data submissions.

Patient safety

Sutter Health assesses Patient Safety via the methods specified in each of its hospital's HCAi Health Equity data submissions.

Addressing patient social drivers of health

Sutter Health assesses Social Drivers of Health via the methods specified in each of its hospital's HCAi Health Equity data submissions.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Sutter Health assesses Priority Treatment via the methods specified in each of its hospital's HCAi Health Equity data submissions.

Care coordination

Sutter Health assesses Care Coordination via the methods specified in each of its hospital's HCAi Health Equity data submissions.

Access to care

Sutter Health assesses Care Access via the methods specified in each of its hospital's HCAi Health Equity data submissions.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide?

Yes
