Customs Visit and Workshop to PIC

PIC received a familiarisation visit by Johor Customs Director and his delegation on 21 Feb 2023 as the newly appointed PKN (Pengarah Kastam Negeri) Johor. This visit was organised in collaboration between Customs Statutory Control & Procurement Services (CSCPS), Finance PRPC and Strategic Communication & Stakeholder Management (SCSM) teams.

As the opening of the visit, the delegation was brought to Solid Product Warehouse (SPW) as one of the biggest warehouses in PIC. SPW is the first fully automated rack-supported `high bay' warehouse purpose-built for the petrochemical industry in Southeast Asia. Featuring innovative Automated Storage and Retrieval System (ASRS) technology, it incorporates 84,672 pallet addresses that can accommodate a 21-day storage inventory. There was a briefing on the journey and the history during the construction and an interactive session for them to look at the ground and control rooms.

They were then moved to Solid Products Jetty (SPJ) and given a short briefing on the overview of the SPJ operational system lead by En Zahri Zainal Abidin, General Manager of SPW & SPJ. The delegation also went to the Customs Office which was located at SPJ main gate to meet the officers from Customs Pengerang who were monitoring the movement of cargos.

En Mishabudin Parmin emphasised the importance of collaboration between PETRONAS and Customs in order to provide a smooth and seamless Customs operational process. He also thanked PIC for the relationship built between the two parties and hopes it will continue to persist in the future.

Earlier on 13 Feb 2023, a Customs Workshop was held to strengthen the cooperation between Customs and all stakeholders to ensure smooth operations while not neglecting compliance and good governance. The cooperation between PIC and Customs has been established since the beginning of the RAPID project which included a tax exemption facility also known as RAPID Exemption List (REL).

This workshop was initiated by CSCPS, PRPC Finance to provide sharing session for the Customs to clarify the processes and procedures as set out in the Customs guidelines. In addition, it is one of the new platforms for the participants to get clarifications and crystal-clear understanding from Customs directly in order to provide seamless customs operations activities in the PIC.

Tazkirah

بِسْمِ اللَّهِ الرَّحْمَٰنِ الرَّحِيمِ

"Dan janganlah Engkau mengikut apa Yang Engkau tidak mempunyai pengetahuan mengenainya; Sesungguhnya pendengaran dan penglihatan serta hati, semua anggota-anggota itu tetap akan ditanya (di akhirat) tentang apa Yang dilakukannya.

(Al-Isra : 36)

Delivering our Purpose

Nearly 140 PRPC and its Group of Companies staff attended a special viewing of the President's Townhall on 16 February 2023. The event was live-streamed from the Plenary Hall Kuala Lumpur Convention Centre and was projected to the screen of our Multipurpose Hall here in PIC. In his keynote address, PETRONAS President & Group Chief Executive Officer Datuk Tengku Taufik shared his plans and aspirations for steering the Group's direction for the year ahead.

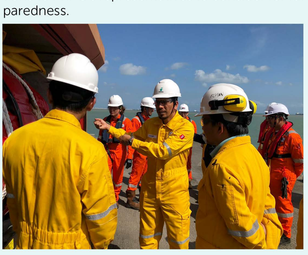
Annual Preparedness Review for PIC & OSRL

As part of Oil Spill Response (OSR) preparedness and readiness, GHSE Oil Spill Management (GHSE-OSM) has organised the Annual Preparedness Review (APR) on 21st February 2023. This engagement was collaborated with Oil Spill Response Limited (OSRL), which is a service provider for oil spill response.

The review was carried out to introduce OSRO, Oil Spill Response Organization as an oil spill response provider, share response and preparedness service, notification and mobilization procedure, review response preparedness of PRPC and to provide recommendation, share on the challenges of oil spill response via incident case study by OSRO and explore and identify potential areas of support from OSRO.

This engagement was attended by various organisations including representatives from HSE PRPC, GHSE-OSM, DBE, PRefChem and SPTS as well as external visitors from OSRL and PT2SB. This engagement comprised of sharing sessions from GHSE-OSM, PRPC, SPTS and OSRL to exchange views relating to Oil Spill Management especially conducted in PIC.

There was also a site visit to the placement of Oil Spill Response Equipment (OSRE)'s placement and jetty area for the participants to have clearer overview the preparedness of PIC when dealing with oil spill incident. The engagement was deemed successful as OSRL and GHSE-OSM exchanged feedbacks based on the observations during the site visit as well as recommended some suggestions to PRPC's representatives to consider for further improvement on the OSRE readiness and preparedness.



Mindset & Behaviour Change Workshop gets the Thumbs up

Having great observable behaviours are important for this company to build a better corporate culture for us to achieve our vision to become a leading world class integrated refinery and petrochemicals producer creating sustainable value and enriching lives. By demonstrating great observable PRefChem Beliefs behaviours, employees in this company would be able to help each other to win together, nurture trust, communicate effectively in achieving the results that we want while promoting safety first.

PRefChem's Chief Executive Officer, Joost Emmen, said having a dedicated culture team would help us to gauge the current culture climate within the organisation and embark on Mindset & Behaviour Change (MBC) programmess for further improvement. He expressed his gratitude to the company's MBC committee, which is sponsored by the CEO and Head of HR, consisting of MBC team lead, M Radzif M Abd Kader, together with Hazryati Hamdan, Irene Abong and Ong Kian Seng from the CEO's Office, in driving and facilitating PRefChem's culture change. Thirty seven highly driven and passionate staffs from various levels were also been identified from each division to be the company's MBC Agents.

"We started with an MBC bootcamp in December 2022 for the MBC agents. Today, we have organised an MBC workshop specifically for leaders since involvement and commitment from leaders is critical to drive great PRefChem Beliefs behaviours throughout the whole organisation," he added.

PRefChem's Head of HSSE, M Ridzuan Jalaluddin, said he enjoyed the MBC workshop and found that there are similarities between the PRefChem Beliefs and Safety Generative Culture in the aspect of giving feedback. "In Safety Generative Culture for example, we always ask ourselves, should we be afraid to speak up on safety issues? Just imagine what would happen if we are afraid in voicing out when we see at-risk behaviours," he added.

Head of Petrochemical, M Zainol M Zin, hoped more similar workshops would be organised in the future. "I feel more time should be allotted for workshops such as this because we can have more lively and interesting activities. The workshop not only helped us to improve our understanding about mindset and behaviour change, but also acts as a refresher course for leaders to get alignment on culture transformation," he added.

Our Start-Up Journey

What's next?
High Density Polyethylene Ethylene (HDPE) feed in.

PP SPZ (Current)
Spherizone Polypropylene (PP SPZ) catalyst injection took place on 17 February 2023 and is running at 65% load.

HPU Common Cold Box (Previous)
Syngas was charged into the cold box on 5 February 2023, and it has been stabilised.
