

RETROFIT OPTIONS

Kern machines can be equipped with a wide range of accessories. Bring your system up to date - with our targeted retrofit solutions, you can increase process reliability, accuracy and temperature stability. At the same time, you reduce malfunctions, increase sustainability and ensure the long-term efficiency of your production.

We would be happy to create a concept for you that is perfectly tailored to your requirements - please contact us.

At a glance

- Optimized chip management (rinsing packages, belt filter, scraper belt conveyor)
- Extension of the tool changer
- Retrofit or extend internal/external workpiece changer
- Energy-saving solutions for greater sustainability - including measures to reduce compressed air consumption in HD machines
- NC software updates for current functions and safety
- Conversion from wet to dry machining
- Integrated fire extinguishing systems for greater safety
- Remote maintenance for fast support
- Internal video monitoring for process control
- Alternative accuracy solutions for machine and spindle (to increase positioning and repeat accuracy)
