

astrum swift

Upgrade Available

Unlock The Future Of Modern Materials Analysis

The Astrum Swift offers faster analyses for high throughput applications. Swift technology is available as an upgrade for existing Astrum and Astrum ES systems.

Increase total sample throughput by up to 51%, depending on detection limit and precision requirements.

Three areas of the instrument are upgraded:

-  New lower capacitance Faraday pre-amplifier and acquisition board
 - Reduced integration times starting at just 1 ms.
-  Redesigned magnet circuit
 - Faster magnet circuit to reduce mass switching times.
-  Astrum CoDaq software
 - The latest software and firmware enable improved efficiency with enhanced control features:
 - Source autotune
 - Multi-language user interface, in English, Simplified Chinese and Japanese
 - Simple and intuitive user interface
 - Automated detector calibration
 - Temperature controlled cryo-cooling
