

GRI content index

Our 2022 Annual Reports follow the GRI Sustainability Reporting Standards issued by the Global Reporting Initiative (GRI). This supplement provides details of our compliance with these GRI standards.

For assurance purposes, GRI compliance has been assessed as part of the external audit procedures for the Annual Reports (AR). See the ‘Assurance Report of the Independent Auditor’ in the 2022 Annual Report based on US GAAP and the ‘Assurance Report of the Independent Auditor’ in the 2022 Annual Report based on IFRS.

2-19 Remuneration policies	ESG - Governance - Managing ESG Sustainability			
	Remuneration Report			
2-20 Process to determine remuneration	Remuneration Report - Board of Management remuneration			

GRI disclosure	Section reference	Requirement(s) omitted	Reason	Explanation
General disclosures				
2-21 Annual total compensation ratio	Remuneration Report - Board of Management remuneration	2-21 a 2-21 b	Not applicable	ASML is using the average annual total remuneration per FTE, instead of the median annual total remuneration per FTE as required by the GRI. We have applied this different indicator in order to comply with the disclosure requirements of the Dutch Corporate Governance Code. The Dutch Corporate Governance Code is embedded in Dutch law as a comply or explain requirement, while GRI is not embedded.
2-22 Statement on sustainable development strategy	Message from the CEO			
2-23 Policy commitments	ESG - Social - Our Supply Chain			
	ESG - Governance - Responsible business - Business ethics and Code of Conduct

GRI 301: Materials 2016	301-1 Materials used by weight or volume		301-1 a	Information unavailable/incomplete	Due to the revised materiality of the topic Circular Economy a new impact was identified to be material to ASML as of 2022, namely the impact on materials used in manufacturing. As this is new there is no data collection process yet in place to be able to fulfill this disclosure requirement. Mass (weight) data is not available in the registration of the majority of the parts and where it is registered it is scattered over systems. In addition, it is not registered in the system if a part/module is 'renewable' or not. ASML needs to set up a process to be able to register the data in one system and is dependent on suppliers to collect the required information as to whether the part is renewable or not. We are currently investigating how we can organize ourselves to be able to collect the information and we anticipate that this will take a couple of years to realize.

GRI Standard	Disclosure	Section reference	Requirement(s) omitted	Reason	Explanation
MATERIAL TOPICS					
Circular economy					
GRI 301: Materials 2016	301-2 Recycled input materials used		301-2 a	Information unavailable/incomplete	Due to the revised materiality of the topic Circular Economy a new impact was identified to be material to ASML as of 2022, namely the impact on materials used in manufacturing. As this is new there is no data collection process yet in place to be able to fulfill this disclosure requirement. ASML does currently not know whether recycled input materials are used to manufacture its products. This is to be registered in the system. Therefore, this data will have to be collected from the suppliers. We are currently investigating how we can organize ourselves to be able to collect the information and we anticipate that this will take a couple of years to realize.
	301-3 Reclaimed products and their packaging materials		301-3 a 301-3 b	Not applicable	We believe that our Strategic KPI better reflects the impact in relation to our material topic on Circular Economy and therefore consider this requirement not applicable. To comply with it as written would not be meaningful or provide clarity considering the nature of ASML products (that they are sold and remain many years in the field with actions being taken to extend their lifetime). So instead of following GRI 301-3 as prescribed we will report our own indicator '% of systems sold in the past 30 years still active in the field' to capture the substance of this GRI in relation to the impact we have on Circular Economy.
Own indicator	% of systems sold in the past 30 years still active in the field	Our business model - The value we create for our stakeholders ESG - Environmental - Circular Economy - Our overall performance in 2022

Occupational health and safety					
GRI 403: Occupational Health and Safety 2018	403-9 Work-related injuries	ESG - Social - Attractive workplace for all - Ensuring employee safety	403-9 b (ii,iii,v)	Information unavailable/ incomplete	For contractors (workers who are not employees but whose work and/or workplace is controlled by the organization), no incident rate can be calculated due to a lack of baseline HR data for the hours worked. We report in line with the vast majority / main requirements of GRI 403-9 and we don't believe that providing the rate for this population would provide any more clarity on our numbers reported. The nature of the work performed by the contractor varies as does the length of the contract which means that estimating the hours is impractical and the actual hours worked are difficult to obtain from the contracted companies. In addition to not reporting the rate for contractors, the definition used for high-consequence does not meet the requirements of GRI due to data unavailability. GRI specifies that the definition should include recovery time instead of lost time (while ASML uses days away from work, so lost time). However, this way of reporting is in line with the OSHA international Health and Safety standard.
