

# Unlock resilient manufacturing with synchronized AI execution

- Modern manufacturing runs on complex, fast-moving supply chains, but most execution systems can’t keep up. Despite investments in digital tools,
- fragmentation still rules the floor: planning, labor, inventory and transportation operate in silos.
- 

- Disconnected systems don’t just slow you down; they create blind spots that drain productivity, inflate costs and leave you vulnerable when the unexpected hits.
- 
- The next era of manufacturing belongs to the connected. AI-powered execution brings fragmented operations into sync—predicting disruptions, coordinating workflows and unlocking real-time control from dock to door.
- 

## When operations stall, AI keeps you moving

Manual decisions and disconnected systems slow everything down, from fulfillment and labor, to inventory and transport. AI eliminates blind spots and keeps operations flowing, even as challenges emerge.

**\$50 billion** is the estimated annual loss industrial manufacturers face due to unplanned downtime.

Deloitte

## Connect every function with one intelligent platform

AI-powered execution connects every part of the supply chain—orders, inventory, labor, warehouse and transport—into one synchronized flow. It keeps data moving in real-time and empowers teams to act faster, with greater confidence.

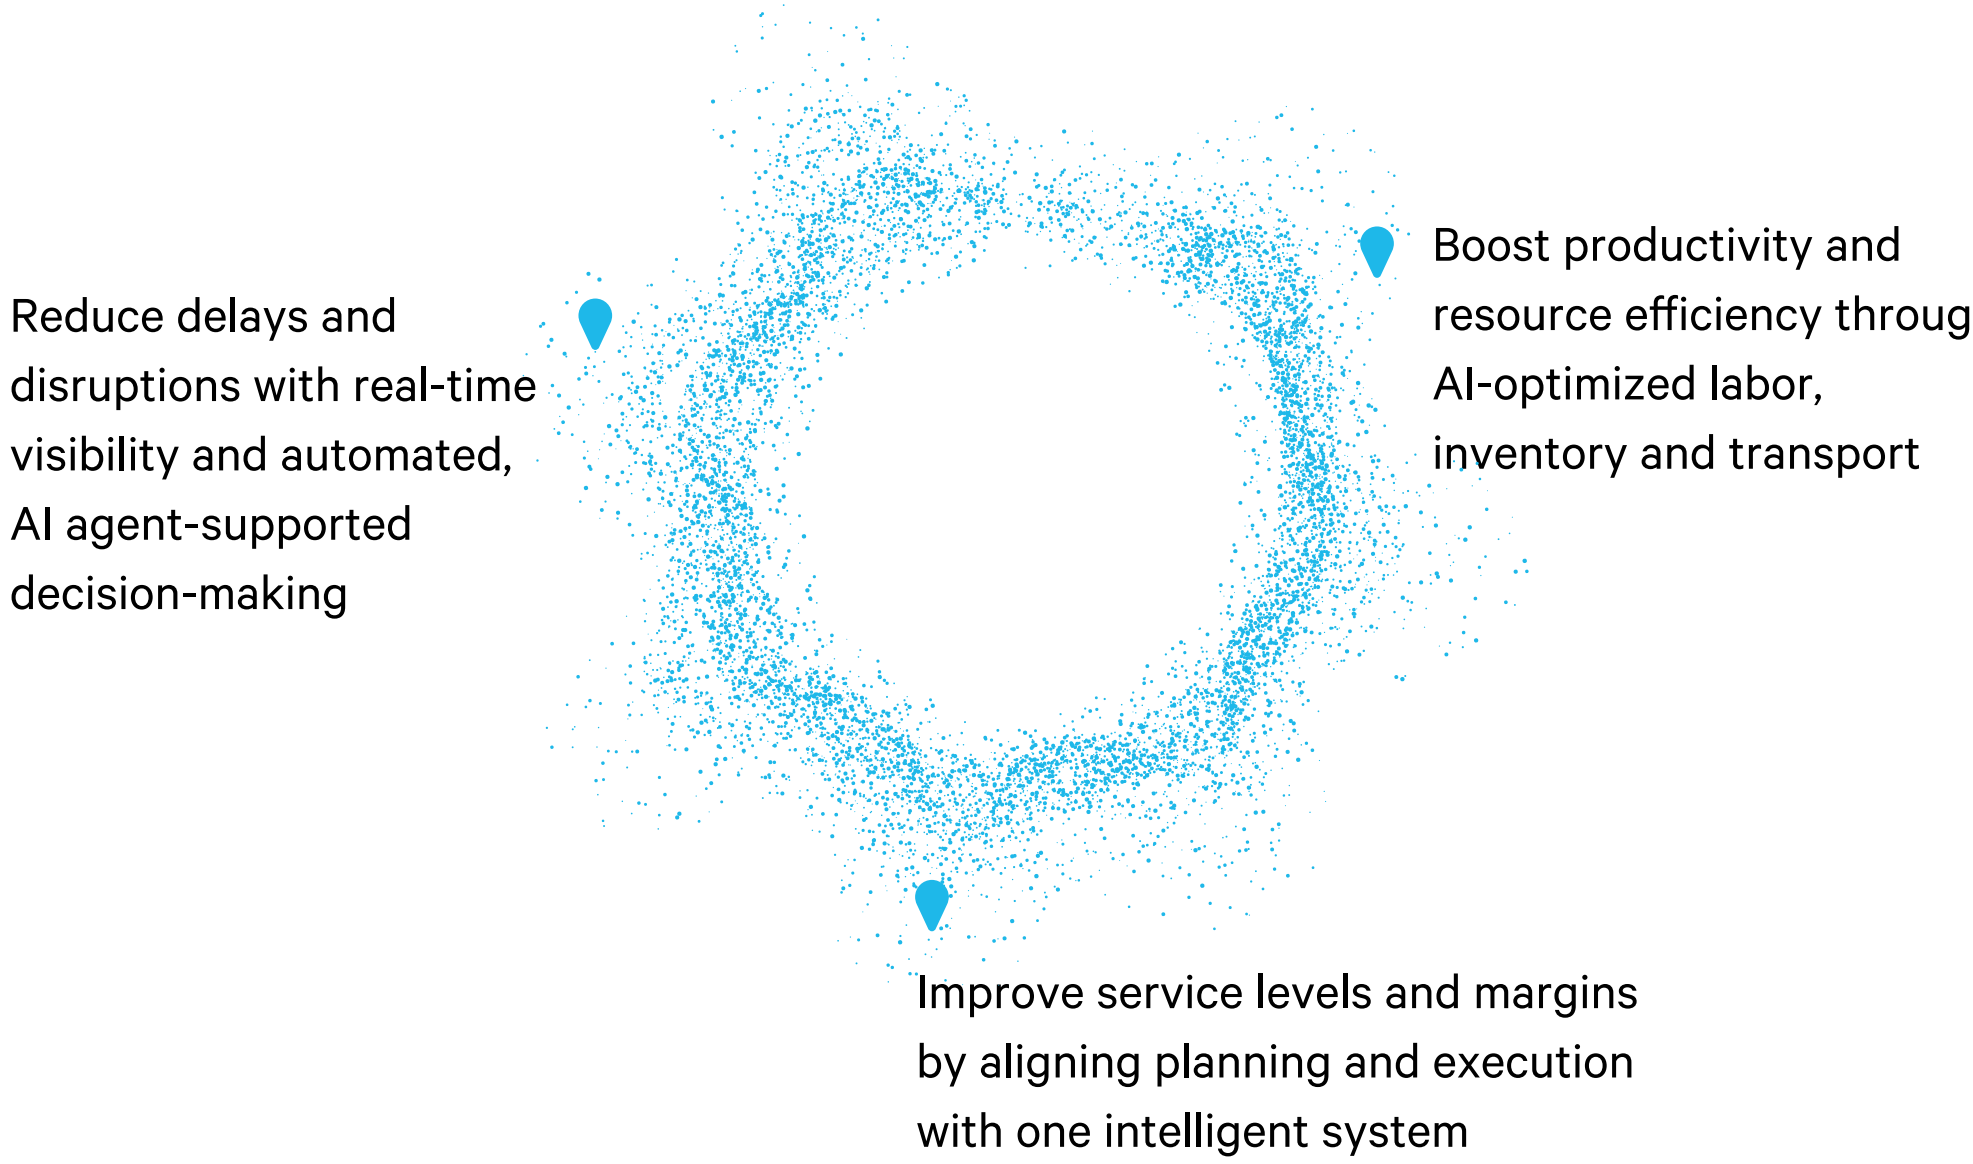

**6x faster revenue growth** is what manufacturers with high system interoperability achieve compared to those with siloed operations.

Accenture

## Accelerate performance with AI-driven execution

Blue Yonder’s AI-powered execution platform and agents helps manufacturers go beyond firefighting, thereby enabling connected operations that are faster, smarter and built to scale.

Here’s how manufacturers are seeing results with Blue Yonder:

**7–17%** ↓  
transportation costs

**8–23%** ↓  
warehouse labor costs

**3–7%** ↓  
safety stock

**2–6%** ↑  
revenue growth

## Dig deeper

Manufacturers can no longer afford to operate with reactive workflows. As complexity rises and disruptions become the norm, industry leaders are turning to Blue Yonder for AI-powered execution to connect every node of their supply chain.

The future of manufacturing demands smarter execution; transforming how you manage inventory and labor, transport and fulfillment to build the agility, accuracy and resilience needed to lead in the next era of intelligent manufacturing. Ready to rethink execution? Start now.
