

Transportation management with Blue Yonder Network

Unlock efficiency and resilience with an interconnected transportation operation

Transportation leaders face mounting pressure to mitigate disruptions, maintain service levels and ensure on-time deliveries. Data silos, manual processes, and fragmented carrier and supplier networks create inefficiencies, hinder visibility, and delay decision-making. The shared challenges by retailers, manufacturers and logistics service providers are compounded by the complexities of onboarding carriers and suppliers with varying standards and systems, leaving transportation leaders at-risk with low resilience.

The Blue Yonder solution

With Blue Yonder Transportation Management System (TMS) on the Blue Yonder Network, transportation leaders can be empowered with precision, speed and agility. By dissolving traditional barriers and unifying carriers, and suppliers, the solution provides a centralized single source of truth.

Through this network-based approach to transportation management, leaders can:

- Operate with absolute certainty—empowering smarter decisions through a complete and unified version of the truth.
- Foresee every move—real-time visibility that promotes proactive responses to potential disruptions.
- Navigate beyond the four walls—effortlessly coordinate and optimize multi-party operations to achieve seamless execution and efficient workflows

By uniting transportation with its carriers and suppliers, Blue Yonder TMS transforms complexity into opportunity. Organizations gain the resilience to adapt to disruption, build stronger connections and ultimately drive the supply chain forward.

- The Network advantage

Network-enabled transportation management solutions

Scalable carrier management and collaboration

No matter what connection a carrier prefers—EDI, API, portal, or mobile—streamline carrier onboarding and deliver uniform, reliable information across loads and at every step in your carrier workflow.

Real-time visibility to minimize impact from disruption

Minimize risk on every load with real-time visibility, ensuring KPIs like on-time, in-full (OTIF) are met. Take it a step further with deeper visibility by connecting to ELD, GPS and ocean container tracking.

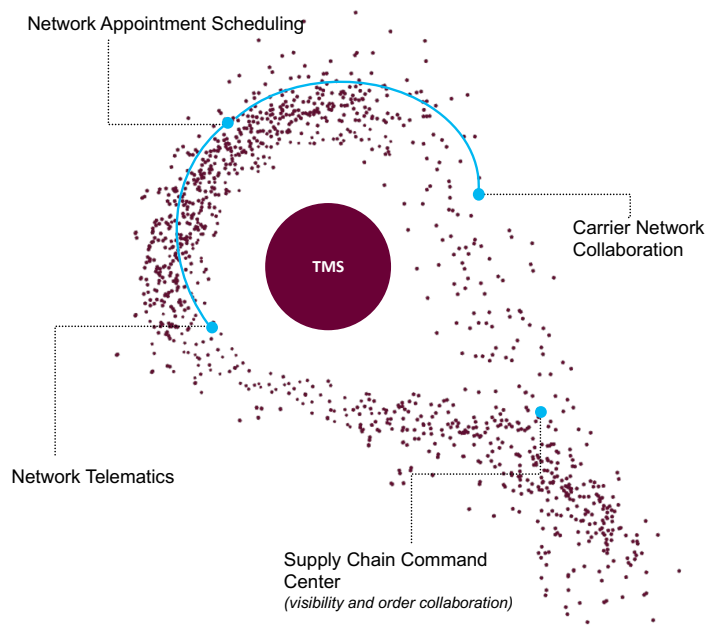

Inbound shipment optimization and collaboration

Optimize your inbound shipments to realize savings and operational efficiencies. Whether it's collect or prepaid freight, minimize order lead times, improve coordination, and ensure on-time deliveries.

Simplified appointment scheduling

Streamline self-service multiparty and facility coordination of appointments based on a single, unified view of availability.

How we do it

Key Benefits

- Centralized data hub for all transportation and supply chain activities
- Multiparty collaboration tools to align carriers and suppliers
- Proactive alerts for shipment and order updates
- Enhanced flexibility to adjust to dynamic supply chain changes

Key Features

- **Visibility:** Gain a comprehensive view of inventory, orders and shipments in real time
- **Resilience:** Adapt swiftly to disruptions and reduce downtime
- **Collaboration:** Strengthen relationships across carriers and suppliers with centralized communication
- **Simplicity:** Enjoy seamless onboarding and streamlined workflows for complex logistics processes
