

# Weekly market update

## Chart of the week (Sep. 5, 2025)

The monthly employment report for August surprised on the downside as job growth totaled only 22,000, and the headline unemployment rate rose to 4.3%. In addition, while last month's job number was revised slightly higher, the jobs number for June was revised lower again and now shows negative job growth for the month. There are some areas where we can take solace: stable earnings indicate that wage pressure remains subdued and the labor force participation rate nudged higher. However, the overall trend in the job market is now clearly slower.

In some ways, it has taken the monthly [Department of Labor report](#) a while to catch up to other data points showing slower economic growth. Job openings, as reported in the [Job Openings and Labor Turnover Survey \(JOLTS\)](#), have been declining, and this month showed just under one open job for every unemployed person in the U.S. Recall, as we were recovering from the pandemic-related economic shutdown, that open jobs at one time showed two open jobs for every unemployed person. One may also recall the chaos of the job market at that time, as another data point in the JOLTS report showed people were quitting their jobs at very high rates as they pursued other opportunities and higher wages. The "quit rate" within JOLTS is now much lower. Even in the weekly jobless claims data, we have seen an environment where companies are not laying off many people, but hiring has slowed.

Our chart this week shows the private sector employment within the monthly DOL report. While job growth was robust last year and coming into this year, we can see that growth in private sector employment has begun to slow. It is still positive but growing at a slower rate. We can also see that, even as we have recovered from the steep decline of the pandemic, private sector job growth has not regained its pre-pandemic level. This is not to say public sector employment is not important, it is. However, in the longer term, it private sector growth which will lead to more sustainable U.S. job growth.

Following the release of the employment report, the chances of a 0.25% rate cut at the Fed's meeting in two weeks increased to 100%. There is even a small chance of a 0.5% cut (we are not of the mind that a 0.5% cut will happen). Beyond that, the market is now pricing in as many as three rate cuts between now and year-end.

Based on these projected cuts, Treasury yields fell, and initially, stock prices rose to new records across the large-cap domestic indexes. Lower interest rates can help justify equity valuations and might even help get the housing market going again, but we need to be careful what we wish for. If rates are falling because the employment market is deteriorating, then the growth outlook will moderate as well. Consumer spending accounts for two-thirds of the U.S. economy, and consumers without jobs cannot spend nearly as much. In that case, the outlook for company profits might begin to slow as well.

We do not think a recession is imminent, but understanding why rates are falling is an important part of the actions an investor might take. In short, we do not want a Fed that is having to lower rates aggressively.

# Weekly market update

## Commentary (Sep. 5, 2025)

### Domestic Equities

- U.S. equity markets opened the week cautiously after the Labor Day holiday, as investor sentiment was dampened by renewed tariff concerns and anticipation surrounding Friday's jobs report. The S&P 500 initially struggled but steadily climbed to a new all-time high by Thursday. However, Friday's disappointing jobs report erased most of the week's gains, leaving the index nearly flat for the week.
- T. Rowe Price shares rose 6% after announcing a \$1 billion private-markets partnership with Goldman Sachs. The deal marks a strategic shift beyond mutual funds, boosting its presence in alternative investments. It also reflects broader industry trends and aligns with Trump-era efforts to expand retail access to alternative assets.
- Broadcom shares rose after a strong earnings report, beating profit and revenue estimates. Revenue jumped 22% to \$16 billion, driven by strong demand across its semiconductor and software divisions. The company's optimistic outlook also reinforced investor confidence.

### International Equities

- Foreign investors faced renewed uncertainty due to bond market volatility, fresh economic data and trade uncertainty following the U.S. Court of Appeals' ruling that the U.S. administration's global tariffs are illegal.
- Developed markets across Europe struggled to gain traction due to sluggish economic data and volatility across global sovereign bond markets. In European economic news, consumer prices rose 2.1% year-over-year in August, while core inflation remained steady at 2.3%. The eurozone economy grew 0.1% in the second quarter, a slowdown from the prior quarter's 0.6% expansion.
- Emerging markets advanced this week as select markets across Asia and Latin America moved higher. India's economy accelerated in the second quarter, expanding 7.8% from a year earlier and significantly exceeding economists' estimates. However, the outlook is more uncertain as the 50% tariff on most Indian goods took effect last week.

### Bonds

- U.S. Treasury yields shifted lower across the curve as softer employment stoked expectations for a more aggressive rate cut from the Federal Reserve. As of the end of the week, Fed Fund futures are pricing in +2.80 cuts through the end of 2025.
- Inflation expectations moved lower, as indicated by a drop in the U.S. Treasury Inflation Breakeven across the curve.
- High-yield bonds experienced their fifth consecutive week of gains, with the yield on the Bloomberg US Corporate High-Yield Index closing just shy of a 40-month low.
- Mortgage rates continue to trend lower with the spread between 30-year fixed-rate mortgage rates (national average) and the yield on the 30-year U.S. Treasury narrowing to 1.65% on Tuesday, its lowest level since 2022.
- Yields on longer-term German, French and Japanese bonds made new multi-decade highs on Thursday but gave back much of their gains going into the end of the week following the rallying in U.S. Treasuries.

### Economics

- On Thursday, the International Trade in Goods and Services report showed a trade deficit of \$73.8 billion, slightly wider than the forecasted \$70.2 billion and notably larger than last month's \$59.1 billion. The widening deficit continues to reflect the broader impact of tariffs.
- Jobless claims came in at 237,000 for the week, slightly above consensus estimates of 232,000 and the prior week's reading of 229,000. While the number of unemployed continues to grow, broad-based layoffs remain stable.
- Friday's employment report highlighted ongoing weakness in the labor market. The economy added just 22,000 jobs for the month of August, well below the forecast of 79,000. The unemployment rate ticked up to 4.3%.
- On Thursday, the Consumer Price Index (CPI) will be released. This will be another important report ahead of the Fed's September meeting later this month.
