

Embedding a video

Step 1

Open the white label aged care animation video.

Click on the 'airplane/share' button.

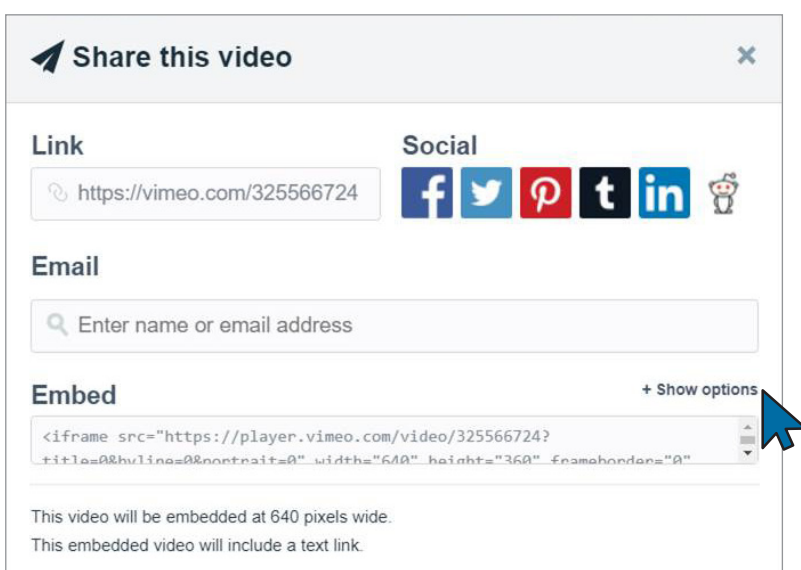

A dialog box will appear with share and embedding options.

Step 2

Select the 'Show options' button near the Embed box.

The panel will enlarge after clicking on this.

Since we want to embed the video, we are only interested in the **Embed** options which are towards the bottom of the box.

Email

Embed – Hide options

```
<iframe src="https://player.vimeo.com/video/325566724?title=0&byline=0&portrait=0" width="640" height="360" frameborder="0">
```

01:50     

Size: Responsive Fixed Size
640 × 360 pixels

Color:

Intro: Portrait Title Byline

Special stuff:

- Autoplay this video.
- Loop this video.
- Show text link underneath this video.
- Show video description below video.

This video will be embedded at 640 pixels wide.
This embedded video will include a text link.

Step 3

Customise the size, text colour and other special functionality for the video through the settings on this box.

Embed – Hide options

```
<iframe src="https://player.vimeo.com/video/325566724?title=0&byline=0&portrait=0" width="640" height="360" frameborder="0">
```

01:50

Size: Responsive Fixed Size
640 × 360 pixels

Color: 00adef

Intro: Portrait Title Byline

Special stuff:

- Autoplay this video.
- Loop this video.
- Show text link underneath this video.
- Show video description below video.

This video will be embedded at 640 pixels wide.
This embedded video will include a text link.

You will want to set **Size** according to the width of your website page. When you change a value in either the width or height, the related value changes in relation with the dimensions (aspect ratio) of your video.

You can change the **Colour** as well. This influences the colour of the text on top of the video. This way, you can adapt the colour to match your branding or website.

The **Special stuff** has a variety of options to add further description about the video and other options like an Autoplay function, by which the video starts playing automatically upon page load.

Step 4

When you are finished with the custom options, select the embed code at the top of the panel.

The code is selected automatically when you click in the box.

However, if that doesn't work, set the cursor anywhere in that code box and then press CTRL+A (Windows) or Command +A (MacOS). That selects everything. After that, press CTRL+C (Windows) or Command + C (MacOS) to copy the code.

Step 5

Now go to your website and select the page or post where you want to embed the video.

In the html mode (Text tab in WordPress) of the page, place the cursor at the spot where you want to show the video. Press CTRL+V (paste for Windows) or Command+C (paste for MacOS) to paste the code into the page.

Your video should now be embedded in your page.
