

SMART

OPERATIONS MANAGEMENT ECOSYSTEM

ROAD | RAIL | CITIES

INTEGRA™ is built using UGL's 25+ years system integration experience combined with the expertise of a proven International Digital Transformation Partner.

INTEGRA™ provides comprehensive control of tunnel, motorway, rail, smart cities, and utility management systems.

INTEGRA™ provides unmatched security, stability, speed, scalability, and resilience.

MULTI-PROTOCOL

INTEGRA™ Smart Operations Ecosystem

INTEGRA™ is UGL's advanced suite of integrated Operations Management Control Systems (OMCS) software applications across multiple market verticals.

INTEGRA ITS

ENGINEERING A SMARTER FUTURE

Integrated managed motorway digital platform for highways, road tunnel traffic and plant infrastructure.

INTEGRA Rail

ENGINEERING A SMARTER FUTURE

Integrated digital platform delivering an intelligent solution for central operations control, M&E plant monitoring, train management and signalling control (powered by SigView).

INTEGRA BMS

ENGINEERING A SMARTER FUTURE

Sophisticated automation system that controls and monitors building HVAC, MVAC, Security, and other M&E systems.

INTEGRA Utilities

ENGINEERING A SMARTER FUTURE

Digital platform for utilities & smart city applications that provides data sharing across community infrastructures, surveillance management, building management, and connected devices.

- ▶ Minimum platform availability is 99.995%
- ▶ Minimum network availability is 99.999%
- ▶ Response times less than 1 second

Modular Design with Fully Integrated Control, Configuration & Monitoring

INTEGRA™ incorporates management and control modules to suit all motorway, ITS, tunnel, rail, building, cities or utility applications. Modules are fully integrated into an overarching management and control user interface.

INTEGRA™ is built on a Service Oriented Architecture (SOA) framework to enable connectivity with other business information systems.

INTEGRA™ Smart Operations Ecosystem

INTEGRA™ provides a state-of-the-art configuration, monitoring and decision support ecosystem to support mission critical smart city infrastructure and transport operations.

INTEGRA™ provides control room operators with fast system response times, uptime performance, stability, security and long-term locally-based technical support.

KEY CAPABILITIES

Typical Systems (Major Projects)

- > 50,000 field IO points
- > 500,000 SCADA IO points
- 1 second field response times

System Features

- Minimum ICT and PLC hardware architecture availability 99.995%
- Minimum network architecture availability 99.999%
- System designed using strict RAMS/ FMECA methodologies
- Fully scalable for multi-tenancy or multiple systems
- System design complies to AS61508 and EN50128
- Built to Safety Assurance SIL 2 standards

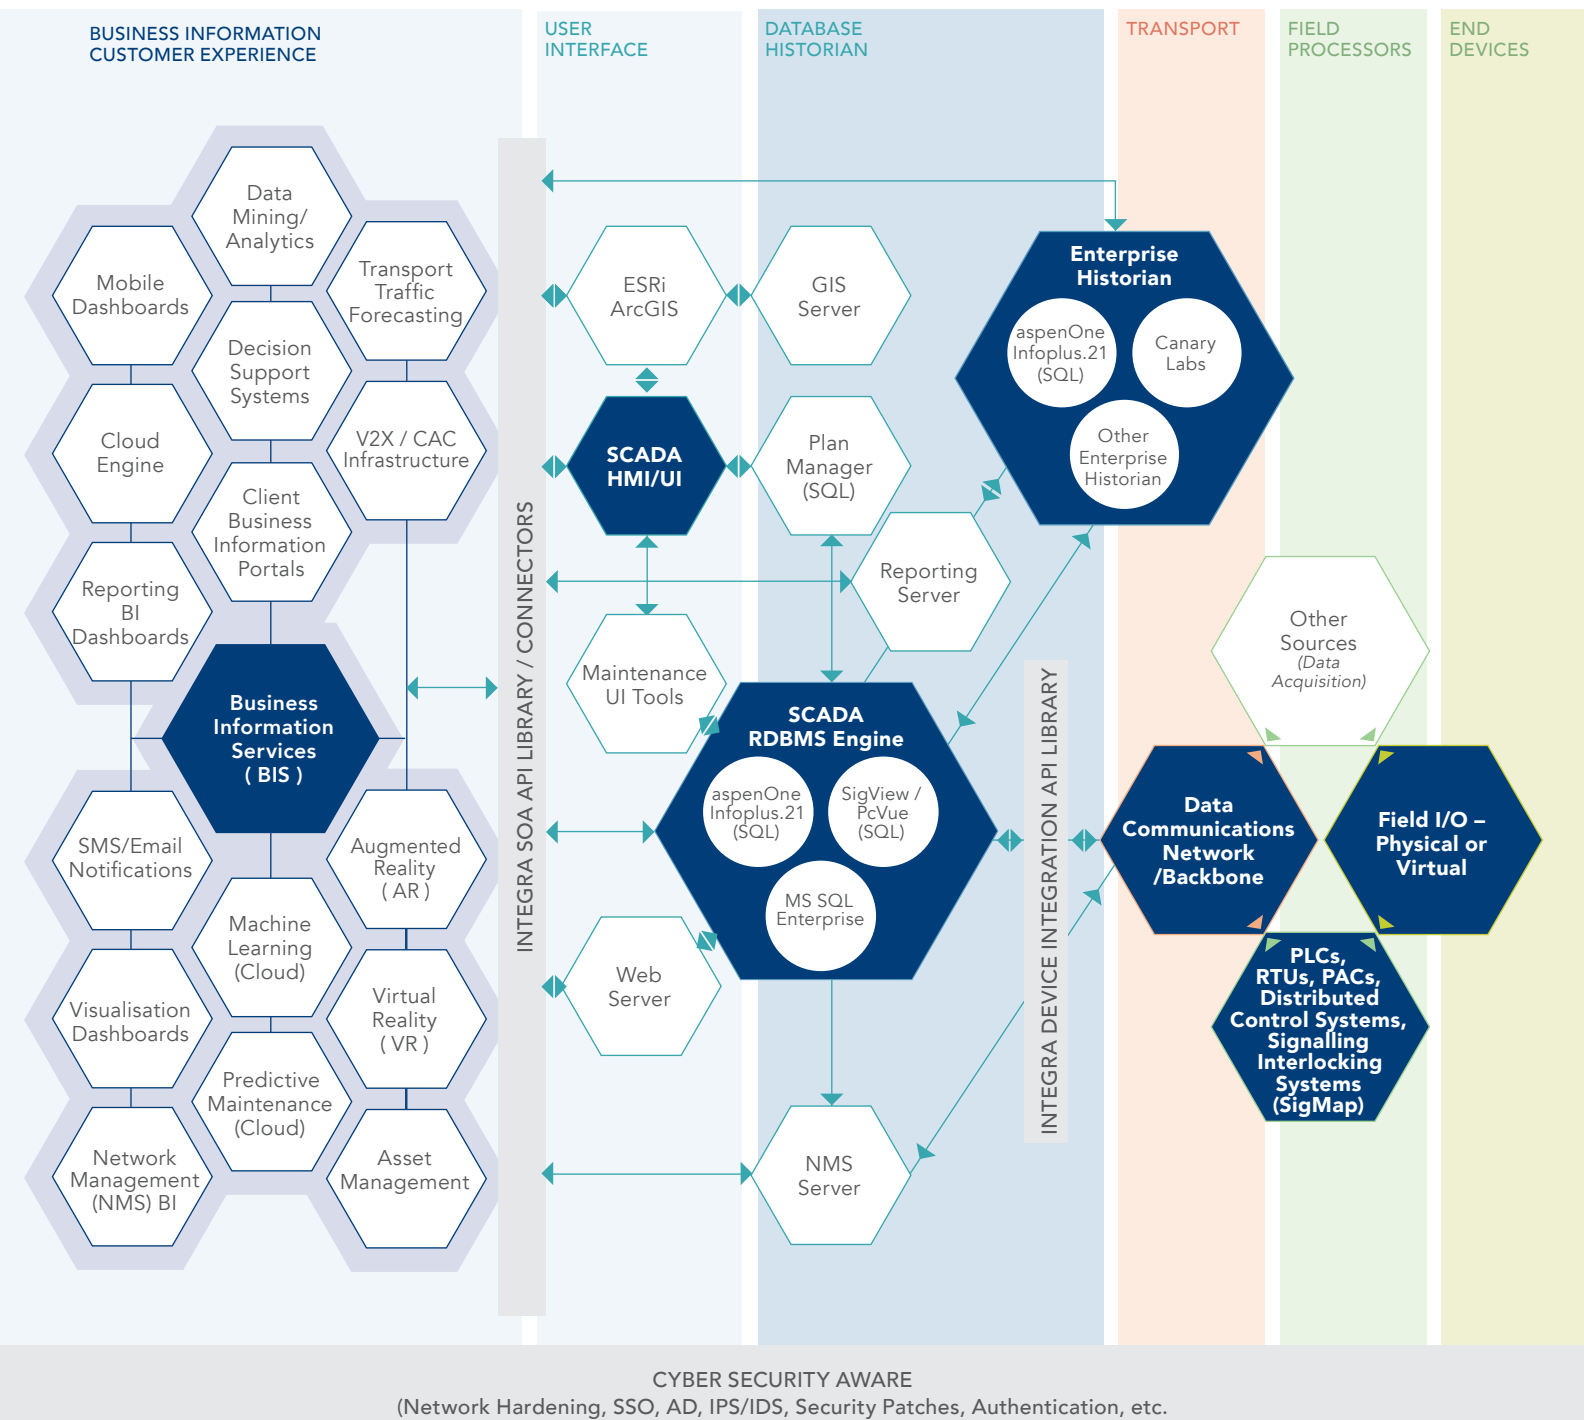

Hardware Platforms

- Fault tolerant and highly available IT/ICT service platforms
- Resilient network and PLC architecture
- Scalable and expandable to handle multiple system modules

Clem 7 Tunnel, Brisbane

INTEGRA™ Ecosystem Stack

INTEGRA's secure ecosystem architecture effortlessly manages over 500,000 SCADA IO points, providing fast, granular monitoring and control.

Key Features

▶ UNIFIED VIEW UX	Manages and monitors data from multiple sub-systems like TMCS (traffic, electronic signage etc.), PMCS (lighting, ventilation, etc.) from a single screen i.e. single pane of glass view.
▶ REAL TIME RESPONSE / GRANULAR MONITORING	Architecture achieves < 1s (or sub-second) response times to field changes where the end device / protocol supports the framework.
▶ OPEN BIS ECOSYSTEM CONNECTIVITY	BIS interfaces use standard APIs to develop plug ins to the management infrastructure.
▶ CUTTING EDGE HOSTING PLATFORMS	Provides the best-in-the-market hosting platforms, catered to handle the required availability and downtime targets of mission critical systems. <i>(Cloud based solutions are an advanced feature.)</i>
▶ FUTURE-FOCUSSED DIGITAL / TECHNOLOGY PARTNERSHIP	Platform is designed in conjunction with a proven International Digital Partner specialising in future-focussed IT digital transformations and product development, with over 700+ IT engineers.
▶ IOT AND SMART CITIES ENABLED PLATFORM	System design enables an IoT dashboard view incorporating AI.
▶ MOBILE PLATFORM	System design enables support for mobile solutions.
▶ END TO END ECOSYSTEM STACK	Enabled with partnerships with proven technology vendors to provide a fully integrated system with evolving technologies for continued growth and success.
▶ SERVICE ORIENTED OPEN ARCHITECTURE	Built on a SOA framework that provides seamless connectivity to various BIS systems (hosted on premise or in the cloud) like Asset Management, Transport Predictions, AI/ML Predictive Maintenance, IOT Platform etc.

About aspenOne Infoplus.21

UGL has selected aspenOne Infoplus.21 as INTEGRA's enterprise historian and RDBMS because of its raw performance metrics, sophisticated big data analytics toolkit, fast sampling rate and robust security profile.

Produced by Aspen Technologies, it is internationally regarded as amongst the top three enterprise historians for mission critical applications.

About Sigview (PcVue)

UGL has selected SigView (powered by PcVue) as INTEGRA's SCADA RDBMS for Train Control Applications because of its proven use in train control applications in the APAC region, support for a range of data acquisition formats, and its performance metrics.

Smart Traffic Management, Plant Management & Managed Motorway ITS Applications

Intuitive Traffic Management Control System (TMCS) and Plant Management Control System (PMCS) provide Smart control, monitoring and configuration of all mission critical tunnel / motorway ITS equipment.

INTEGRA BMS
ENGINEERING A SMARTER FUTURE

INTEGRA ITS
ENGINEERING A SMARTER FUTURE

KEY FEATURES

Integrated GIS mapping

Advanced incident / motorway management engine

Electronic VMS, VSLS, LUMS sign management

Intelligent traffic counting & AID detection

Rule-based dynamic speed limiting and interlocking

Advanced traffic plans management engine

WestLink M7 Tollway, Sydney

Queue management

Compliant to C2C / S2S framework

Incident logging lifecycle management (IL2C)

Business intelligence system

Ventilation, drainage, HVAC, MVAC, lighting management

BMS, security, CCTV, communications, HV, LV electrical management

Smart Central Control System (CCS), Train Management System (TMS) and Plant Management System (PMCS) for Rail Applications

Smart Central Control System ensures seamless rail operations, including real-time control mechanisms and data for various diverse systems by providing a digital layer of intelligence enabling improved performance, increased capacity and managed disruption.

Smart Cities Management System (SCMS) for Connected Cities

Smart Cities Platform is a digital platform that provides a data sharing layer to connect community infrastructures. With INTEGRA™, cities can flourish with economic efficiencies, improved public infrastructure and cost reductions.

INTEGRA Utilities

Data communications

Environmental Management

Security & access control

Parking infrastructure

Intelligent Lighting Control

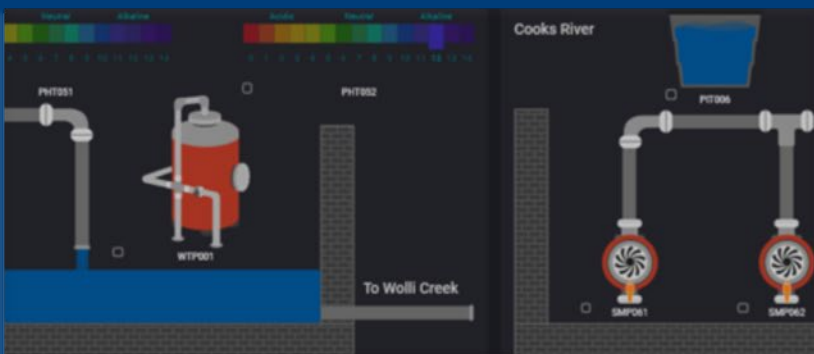

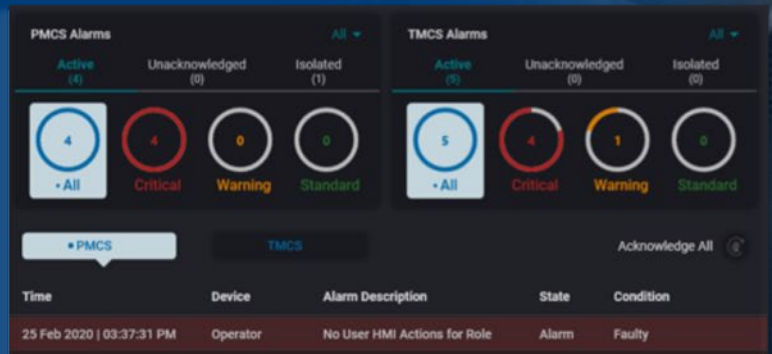

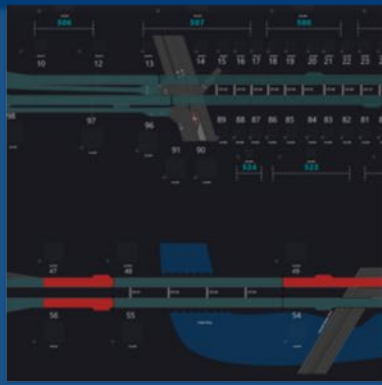

Utilities management

Cross domain information

FOCUS on Operational Intelligence, User Experience, Open APIs, BIS Connectivity, and Future-Focussed Architecture

INTEGRA's modern, intuitive graphical UX interface and robust design simplifies control room management and provides fast, granular monitoring, configuration, control, alarm management and analytics.

Recent/Current INTEGRA™ projects

M5E TUNNEL AND MANAGED MOTORWAY OMCS

As part of the RMS M5 East tunnel upgrade for Stage 2 WestConnex, UGL has upgraded the OMCS and installed M2M interface with RMS TMC, updating UGL's initial tunnel, motorway and ITS control system installed by UGL during tunnel construction

UGL role: Tunnel and motorway INTEGRA™ OMCS

CROSS RIVER RAIL BRISBANE

Commencing in 2019 the \$5B project includes a 10.2 km rail line from Dutton Park to Bowen Hills in Brisbane, including a 5.9 km tunnel under the Brisbane River, four underground stations and two station upgrades.

UGL role: Tunnel and station M&E D&C with INTEGRA™ RAIL and BMS and 24 years' maintenance

SYDNEY METRO NORTHWEST

Sydney Metro North West is Sydney's largest rail project ever. It includes 15.5 km of twin rail tunnels, 4 km of viaduct and eight new stations.

UGL role: Tunnel and station M&E construction, O&M, and installation of INTEGRA's Power Control System (PCS) and Tunnel Ventilation Control System (TVCS).

UGL Smart Transportation Solutions

Market leader in end-to-end technology solutions

Incident Overview

This state-of-the art, user-friendly and innovative UGL system is designed to streamline control and operations management – so that you can work with confidence.

Whatever your needs are for a project, INTEGRA™ has got you covered.
