

TECHNICAL BULLETIN

TB 0172

LV Circuit Design Presentation Standards

Background

Recently there have been a number of complaints that some low voltage network designs that have been received and certified have not clearly shown the low voltage Circuit intentions of the designer. This has resulted in confusion and delays during the construction stage of the project which could have easily been avoided.

Actions

This technical bulletin is issued to provide guidance to Designers and clarify Endeavour Energy's expectations.

These images have been created to highlight some design situations that have led to confusion during the project construction stage and provide some presentation options for the circuit diagrams that will eliminate this confusion.

Please note that the following images have been provided as a guide only.
