## **Introducing GDA2020 for designs**

26 July 2023

We know that there are pain points for ASPs submitting designs through GDA94 geospatial datum and in the past, this was the only way we could accept designs. We're excited to announce that we're working on changing this and we are almost ready to go live with a solution.

Our new solution will enable ASPs to submit designs and Works As Executed (WAE) in GDA2020 geospatial datum. In summary the proposed changes are:

- GIS data extracted from our systems, will automatically be available in GDA2020
- Designs extracted in GDA2020 must be submitted back to Endeavour Energy in GDA2020, including Works As Executed (WAE) drawings
- Any current designs being worked on in GDA94 can still be submitted back to Endeavour Energy in GDA94, including WAE drawings
- If submitting in GDA2020, please highlight on the design above the title block with the words "GDA2020"
- If submitting in GDA94, please highlight on the design above the title block with the words "GDA94"

We are currently testing the new solution, including with selected ASPs. We expect to implement these changes in the next 2 weeks and we will communicate back with you once we go live.

As always, should you need anything further, please don't hesitate to contact us at [aspaudit@endeavourenergy.com.au](mailto:aspaudit@endeavourenergy.com.au).

Kind regards,

**Customer Network Solutions**
