**IN015/2023**

**Enviro ArcGIS is now live**

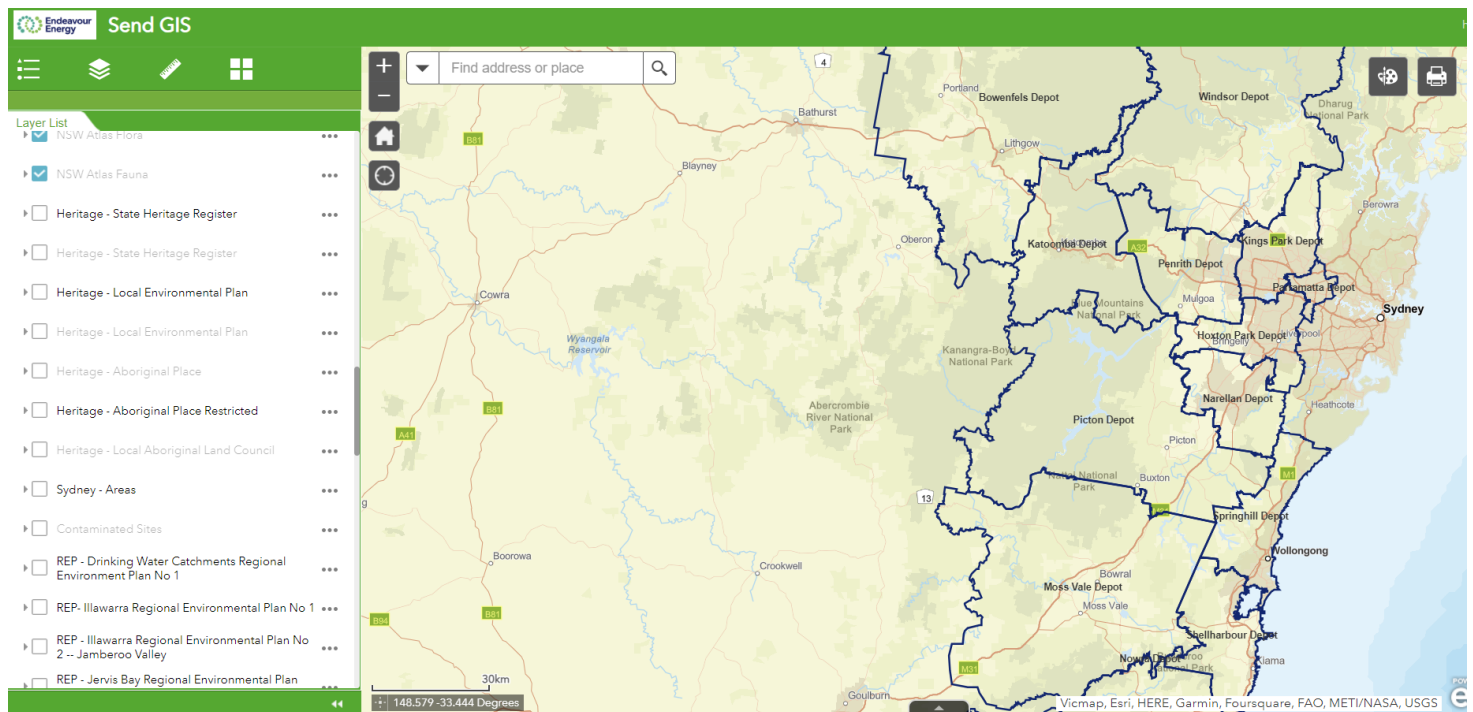

9 August 2023

As you know, GIS (Geographic information system) is a commonly used tool for Environmental Impact Assessment (EIA), environmental management, modelling, and planning associated with development and operation of Endeavour Energy's distribution network.

Following our previous environmental training, we received feedback from ASPs that they would like access to the same technology resource (GIS) as our technical teams have access to, to make it easier to compile summary environmental reports (SER).

We're pleased to announce that we have now migrated our EnviroGIS layers to the ArcGIS platform.

You will be able to access this information through your usual ArcGIS login, with additional layers related to the environment now selectable.

If you have any technical difficulties, please contact our HelpDesk on (02) 9853 6888.

Should you need anything further, please don't hesitate to contact us at [aspaudit@endeavourenergy.com.au](mailto:aspaudit@endeavourenergy.com.au).

Kind regards,

**Customer Network Solutions**
