### **Transition from 'free issue' to 'reimbursement' for Dsub Monitors**

15 Oct 2024

Over recent years, Endeavour Energy has been installing Dsub monitors into padmount substations in selected greenfield and brownfield locations. These monitors have proven effective in aiding Endeavour Energy to manage power quality requirements driven by high penetration of solar panels.

Since mid-2023, Dsub monitors have been 'free issued' to Accredited Service Providers, through approved padmount substation suppliers.

**Endeavour Energy is now planning to transition the funding of these monitors from 'free issue' to 'reimbursement'.** This means that the 'Dsub monitor' will be identified as an 'Endeavour Energy Funded and Reimbursed' item on certified designs. These changes will come into effect for all Design Information issued from 1<sup>st</sup> January 2025.

A reimbursed rate of \$2,535.00 will be applicable for each Dsub monitor identified in designs where the Dsub Monitor is a part of the Endeavour Energy funded scope.

Existing projects, where the Dsub Monitor has NOT been identified as being part of the reimbursement scope, will continue to be 'free issued'.

If you have any questions regarding these changes, please reach out to the Customer Networks Solution team on [cwadmin@endeavourenergy.com.au](mailto:cwadmin@endeavourenergy.com.au)

Kind regards,

**Customer Network Solutions**
