

ZURICH ACCOUNT-BASED PENSION (ZABP) MEMBER OUTCOMES ASSESSMENT

INTRODUCTION

In this report, Equity Trustees Superannuation Limited publishes the results of our annual assessment of how well the Zurich Account-Based Pension (ZABP) product (the **product**) issued from Zurich Master Superannuation Fund (the **fund**) provides member outcomes and promotes members' financial interests. The assessment is based on information as at 30 June 2024.

METHODOLOGY AND STRUCTURE

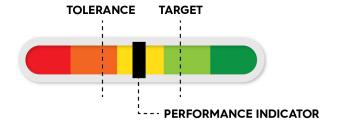

In conducting this assessment, we compared the product to other choice superannuation products included in statistical data published by the Australian Prudential Regulation Authority (comparable products) using the criteria in Part 6 of the Superannuation Industry (Supervision) Act 1993 and Prudential Standard SPS 515 Strategic Planning and Member Outcomes.

This report includes:

- our overall assessment of whether the product provides optimal member outcomes and promotes their financial interests;
- a dashboard that depicts our assessment of the product's market-relative performance for each outcome we aim to provide members;
- a table summarising the key metrics that we relied on when making this assessment; and
- our commentary on this performance that includes action items to improve suboptimal performance.

For each member outcome, the dashboard presents the relevant segment of market performance. The width of each segment is based on the range of market performance for each outcome and is specific to each outcome. The positioning of the black performance indicator bar against the colour coding is our assessment of how well the outcome has been delivered. The colour coding gives a visual representation of performance that moves from neutral (yellow) through orange to least tolerance (red), and in the opposite direction from yellow to the target (or green) area of the dashboard. The assessment of each member outcome is based on several equally-weighted metrics. Accordingly, if one metric is outside our tolerance level it doesn't automatically mean the entire member outcome is outside our tolerance level.

Example dashboard for illustrative purposes only

The target is generally the average position of the comparable products while the tolerance level is the trigger for us to consider any necessary actions to improve member outcomes.

Please visit our <u>website</u> to view a short video that provides more information about the operation of the dashboard.

OVERALL ASSESSMENT

Having carefully considered the comparisons of the product with comparable products set out in this report, including the dashboards, metrics, commentary, and other relevant information available to us at the time of writing, we have concluded that as a result of the following factors the product is promoting members' financial interests:

- 1. the fees and costs that affect the return to members are appropriate having regard to their financial interests;
- 2. the net returns for the product (i.e. returns after deducting all fees, costs and taxes) are not consistent with market rates;
- 3. the level of investment risk for the product is not acceptable in relation to the net returns generated;
- 4. the investment strategy for the product is appropriate;
- 5. the options, benefits and facilities offered in the product are appropriate for members; and
- 6. the scale of the product and the fund does not disadvantage members.

DASHBOARD

STRATEGIC CONTEXT

Working together with the fund's promoter, Zurich Australia Limited, our purpose is to provide members with:

- simple, viable and effective superannuation products that are competitive and leverage the Zurich Group's capabilities and reputation;
- excellent customer service, strong governance and compliance management along with sustainable investment returns.

To support this purpose, our goals for the fund are to deliver competitive products to members, meet members reasonable expectations, maintain strong governance and maintain fund viability (while investigating long term strategic solution).

The product is a choice pension product.

INVESTMENT RETURN

Outcomes	Investm market	sistent with			
Our product's performance relative to comparable products		Tolerance		Target	
Metrics	Ref	Metric Label	Value	Tolerance	Target
	1.1	1-year actual net return	8.23%	8.45%	9.05%
	1.2	3-year actual net return	2.43%	3.29%	4.01%
	1.3	5-year actual net return	3.96%	4.60%	5.13%
	1.4	10-year actual net return	5.38%	5.53%	6.17%

^{1.0} Investment returns and associated targets and tolerance levels are weighted averages for the product. The weighted averages are based on the performance, asset allocation and funds under management of the investment options available in the product. The table in Appendix 1 provides more information.

1.1 – 1.4 The product's fee structure leads to different net returns for different account balances. The table in Appendix 2 provides more information.

Commentary

The performance indicator measures the average investment return of all investment options in the product over 1, 3, 5 and 10-year periods and is based on an equal weighting of all the metrics in the above table.

Appendix 1 displays the returns for each investment option available in the product and its weighted average returns over these periods.

This commentary focuses on the 5-year weighted average return to 30 June 2024. The 5-year period is a balance between short-term and long-term performance. When reading this commentary, it's important to bear in mind that past performance is not a reliable indicator of future performance.

Over the 5-years to 30 June 2024 the product's weighted average investment return was outside our tolerance level.

The major detractors from investment performance over the 5-year period was manager selection and performance relative to peers. However, it is important to note that all the diversified options listed in Appendix 1 have passed the performance test in APRA's Comprehensive Product Performance Package.

While we cannot remove underperformance in the past, we will seek improved member outcomes through enhancements to the investment strategy.

The investment strategy for the Fund is reviewed annually which, includes the risk return profile of the investment options, and we are comfortable it is appropriate for members.

^{1.2 - 1.4} Net returns are based on historic returns and the current fee structure.

INVESTMENT RISK

Outcomes		ent risk for a \$50,000 account balance in $^{\circ}$ d Risk Measure (SRM) $^{2.0}$.	the produ	ıct is consister	nt with the
Our product's performance relative to comparable products		Tolerance		Target	
Metrics	Ref	Metric Label	Value	Tolerance	Target
	2.1	Negative annual net returns over last 10 years	2.15	2.00	1.00

Commentary

The performance indicator measures the weighted average number of negative annual returns for the 10 years to this date.

product. The weighted averages are based on the performance, SRM and funds under management of the investment options available in the product. Portions of years have been rounded up or down to a whole

When reading this commentary, it's important to bear in mind that:

year.

- we have focussed on asset classes that have a material effect on the number of negative annual returns over the last 10 years;
- the Standard Risk Measure assesses the number of negative annual returns and is not an indicator of the magnitude of the negative returns in those years;
- over the period Cash returns have been at historical lows, potentially less than the cost of administration fees; and
 - past performance is not a reliable indicator of future performance.

Over the 10 years to 30 June 2024 the weighted average number of negative returns for the product was outside our tolerance level.

The contributing factors of the negative annual returns over the period were a combination of manager selection and the product's fees and costs in the following asset classes:

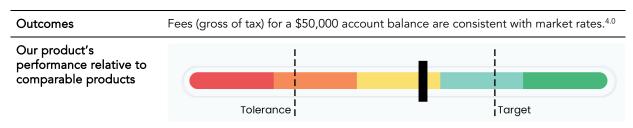

- Australian Shares; and
- Cash.

While we cannot remove underperformance in the past, we have sought to protect member outcomes by reducing investment risk through changes to the investment strategy, the results of which we are seeing through the product's short term investment returns.

We therefore believe these changes will enable the level of investment risk of the product to fall within our tolerance level in future. No further action is required as a result of this assessment.

FEES AND COSTS

Metrics	Ref	Metric Label	Value	Tolerance	Target
	4.1	Total fees	1.15%	1.43%	0.98%

4.0 The product's fee structure leads to different net returns for different account balances. The table in the Appendix 2 provides more information.

4.1 These fees include a weighted average investment fee that is based on the investment fees and funds under management of the investment options available in the product.

Commentary

This table lists the product's total fees and costs (administration and investment fees and costs). Other fees may be payable which are set out in the product's disclosure documents.

The performance indicator measures total fees and costs together against comparable products.

Total fees were within our tolerance level.

As a result, we are comfortable that fees and costs are consistent with market rates and therefore are appropriate having regard to members financial interests.

MEMBER SERVICES

Outcomes	Administration services satisfy member expectations.							
Our product's performance relative to comparable products	Tolerance Target							
Metrics	Ref	Metric Label	Value	Tolerance	Target			
	8.1	Administration-related EDR complaints	11.13	3.50	1.50			
	8.2	Service Level Achievement	86.47%	80.00%	95.00%			
	8.3	Administration fees	0.76%	0.62%	0.38%			
	8.4	Information security controls	Effective	Partially Effective	Effective			
	8.1 This is Authority 8.2 Servic transactio 8.4 This is	neans "External Dispute Resolution". the annual number of administration-related of per 10,000 member accounts. e level achievement measures the portion of nos that were processed within our service levels our view of the effectiveness of the Administratependent review completed during the year.	ew member, contri l.	bution and benef	it payment			

Commentary

The performance indicator measures the delivery of administration services against our service levels, and against the cost of similar services for comparable products.

The performance indicator, which is within our tolerance level, is based on an equal weighting of the above metrics. Service level achievement and the administrator's information and cyber security controls were within our tolerance level.

The number of complaints about administration services that have been made to the Australian Financial Complaints Authority is outside our tolerance level. However, we review all complaints to make sure that valid complaints are upheld and the member receives appropriate remediation / compensation.

Administration fees were outside of tolerance level. As total fees are within our tolerance level, no action is required as a result of this assessment.

As a result, we are comfortable that administration services satisfy member expectations and therefore consider the options, benefits and facilities offered in the product are appropriate for members.

SCALE

Outcomes	The fun	The fund is likely to deliver optimal outcomes in the future.						
The scale of the fund relative to comparable products		Tolerance			Target			
Metrics	Ref	Metric Label	Value	Tolerance	Target			
	9.1	RSE adjusted total accounts growth rate	-10.37%	-6.25%	-2.50%			
	9.2	RSE Net Cash Flow Ratio	-10.21%	-2.75%	-0.50%			
	9.3	RSE Net Rollover Ratio	-7.48%	-3.00%	-1.75%			

Commentary

The performance indicator measures the fund's growth and ability to deliver scale benefits to members against other funds.

The performance indicator, was below our tolerance level, is based on an equal weighting of the above metrics.

assets averaged over the three year period, excluding SFTs.

The fund is closed to new members and continues to be in run off, with membership decreasing by approximately 11% in the year ended 30 June 2024. Membership is expected to decrease at a similar rate over the next year.

With total member benefits of approximately \$821M and approximately 8,100 members, we believe that this runoff is manageable while the fund's fee guarantee arrangement is in place until 30 June 2025.

Therefore, we are comfortable that the scale of the product and the fund does not disadvantage members.

LIQUIDITY

Outcomes Benefit and rollover requests can be met in a timely manner from investments [Our product's performance relative to comparable products Tolerance

Metrics	Ref	Metric Label	Value	Tolerance	Target
	10.1	Investment liquidity in a GFC scenario	87.31%	40.00%	80.00%

10.1 Liquidity is a weighted average that is based on the liquidity in a Global Financial Crisis scenario and funds under management of the investment options available in the product. The table in Appendix 1 provides more information.

Commentary

The performance indicator measures the fund's ability to meet benefit and rollover requests in a timely manner.

We regularly monitor whether the investments would be able to meet cash requirements in extreme situations. Based on our analysis, we consider that benefits are supported by liquid investments.

As a result, we are comfortable that the level of liquidity risk for the product is acceptable.
