Solving tomorrows challenges today

Modern battery production demands the strictest humidity control.

Our mission: We develop intelligent, scalable and modular Mini Environment process enclosures, tailored to your individual production requirements, with extremely low humidity and exceptional energy efficiency.

Our next generation Mini Environment Solutions provide dew points up to -60°C and below directly at the point of use – ensuring maximum product quality in sensitive processes.

Customer challenges – our solutions:

Customer need	Our solution
Ultra-low dew points	Dew point down to -60°C at point of use
Reduce air volume, energy costs and OPEX	Targeted air delivery, optimized consumption
Keep people & process environments separate	Modular cocoons and flexible dry zones
Lower operational expenditure	Energy efficient and cost optimized design
Ready for future tech (solid state, dry coating etc.)	Built for next-gen battery manufacturing

Ready to take battery production to the next level?
Discover how our modular solutions set new standards in precision, efficiency, and flexibility.
