LogMeIn Resolve

Datasheet

The IT Management Platform MSPs Need
RMM, MDM and Advanced Remote Support

Disjointed RMM, MDM, and Remote Support solutions are not only hard to manage, but can eat into your margins. With LogMeIn Resolve's MSP offering, MSPs can enjoy a single platform that includes the RMM, MDM, and remote support options you need to be truly efficient. Resolve is designed to provide the capabilities you really need at a reasonable cost so you aren't overpaying like you may with other disparate tools.

Remote Monitoring and Management (RMM)

Resolve brings robust proactive capabilities through alerting, patch management, remote execution, and more. Through advanced automation and AI, MSP teams can resolve issues faster, upskill team members, and delight customers.

Mobile Device Management (MDM)

Resolve MDM equips MSPs with a modern, unified solution to secure, manage, and protect mobile devices used in customer environments. MDM extends your offerings to protect more of your customers' assets and secures you as a trusted advisor.

Advanced Remote Support - Camera Share

In addition to Resolve's already robust remote support capabilities, MSPs can implement Camera Share to effectively troubleshoot hardware at customer sites to reduce the cost and time it takes to travel onsite - a win-win!
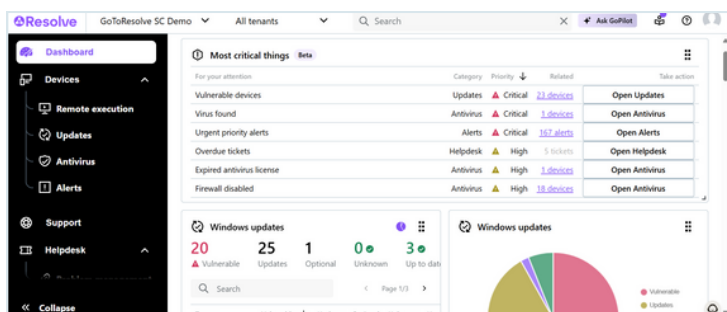

Amplify your MSP with LogMeIn Resolve

- ☑ Enjoy a modern, easy-to-use solution your team will love
- ☑ Gain a true partner in LogMeIn to grow your business
- ☑ Stay secure with an RMM built on a one-of-a-kind zero-trust architecture
