

Case study

Helping an energy company securely repurpose space

An American downstream energy organisation was looking to clean up and repurpose office space

at a refinery to increase productivity, streamline operations, and reduce costs. The company originally intended to execute the project itself, but realising that it did not have the in-house resources or expertise to complete the project while protecting sensitive information, it turned to Iron Mountain Clean Start for help.

Clean Start walkthrough and assessment performed and identified:

- 4m+ documents of various asset types -large format drawings, technical manuals, hr records, invoices, etc.
- Obsolete it assets containing sensitive information
- Office equipment and racking that needed to be removed before the office could be closed
