

HEALTHCARE SOLUTIONS

BUSINESS CHALLENGE

Information is the lifeblood of your health system and consists of clinical, business, and laboratory records – often stored in multiple locations and formats. You need to safeguard this information, so you can focus on your patients.

You also need to keep on top of new privacy and security regulations, including the Privacy Act 1988 (Cth), as you don't want to risk fines or damage to your brand. Keeping your patient data secure, confidential, and easy to access is critical to your ability to deliver patient care.

WHAT IF YOU COULD...

- Free up valuable space and resources by storing your healthcare information in a secure offsite facility?
- Safeguard your patient records and backup tapes from damage, loss, or inadvertent disclosure?
- Save time by having your health information securely destroyed for you?
- Stay compliant with rules and regulations governing information destruction and keep up with sustainability initiatives?
- Support your Information Governance initiatives with a consistent and integrated information management program?

MANAGE WITH CONFIDENCE

With Iron Mountain Healthcare Solutions you can create a program customised to your specific needs that includes:

RECORDS STORAGE

Leverage our storage facilities to safeguard your information using advanced environmental, security, and access controls. Your records will be made available on our web portal, allowing you to quickly locate and retrieve the information you need at any time.

CULLING AND CODING SERVICES

Our professional team of experts can assist you with culling small to large scale filing rooms based upon your comprehensive criteria. They can also assist you with quality clinical coding services with a timeliness of data for clinical costing.

SECURE SHREDDING

Take advantage of our Secure Shredding services. Safeguard your sensitive information through our protective chain of custody process.
