

# Tape management headaches: need help?

Even in today's complex cloud and hybrid IT world, you likely still have backup tapes you are managing. But it can be hard to know what is on those tapes. Iron Mountain can help you get a handle on tape so that you can decide the best way to manage it going forward. Our flexible **Data Restoration and Migration Services** take the guesswork out of tape management.

## Tape identification

Identify what tapes you have, including barcode and label information and the software used to create the backup.

## Session level catalog

Identify information such as server names, backup sessions, and creation dates.

## File level catalog

Identify what tapes you have, including barcode and label information and the software used to create the backup.

## Data restoration

Restore some or all of your data to native format based on e-discovery or business requirements.

## Data transformation

Change media format or type for ease of access and use or continued preservation; i.e., analog to digital or generation upgrades.

## Data migration

Move data to the right storage tier based on use or to the right location for consolidation.

Whether you have an e-discovery request or want to move rich media content to the cloud, Iron Mountain's Data Restoration and Migration Services can help you remain compliant, save money, and reduce your tape management burden.
