

# Extending asset life for reuse

## Maximise returns. Minimise impact.

### Your IT assets have more to give

Maximising value doesn't stop at end-of-use. Iron Mountain's IT asset reuse services securely sanitise, refurbish, re-image, and redeploy devices to extend life, drive financial returns, and support environmental goals. Extensive ISO certifications ensure every step is traceable, secure, and aligned with business, compliance, and sustainability needs.

### Redeployment service

- Securely refurbish, re-image, and redeploy IT assets with remaining functional life.
- Provide upgrades or component-level repairs available prior to redeployment.
- Refurbished devices deliver reliable performance for users while cutting costs and avoiding unnecessary purchases.

### Certified eDisposal

- Devices that can no longer be reused are processed securely and sustainably.
- Reusable components are carefully extracted for recovery and reuse.
- Remaining materials are recycled under ISO 14001 standards.
- Full documentation, serialisation, and independent audits ensure traceability and compliance.

### Certified data sanitisation

- All data-bearing devices undergo secure, certified sanitisation before redeployment or disposal.
- Certificate of Data Destruction (COD) provided for audit and compliance purposes.
- Chain-of-custody protocols enforced throughout for maximum security and accountability.

### Corporate responsibility through lifecycle extension

- Reduce total cost of ownership (TCO) while supporting environmental and social goals.
- Circular approach—redeployment, repair, and recycling—maximises asset value and minimises waste.
- Workflows can be tailored to align with operational priorities and sustainability objectives.
