Environmental Policy

1   Introduction

Our commitment to doing business responsibly is at the heart of everything we do at Irwin Mitchell - it is how we do business and drives us to continually improve and innovate, working in collaboration with our colleagues, clients, suppliers, and communities.

Protecting our Planet is one of the Responsible Business focus areas and incorporates our Roadmap to Net-Zero, key milestones verified by the Science Based Targets initiative (SBTi), our commitment to Sustainable Development Goal 13: Climate Action and the Ten Principles of the United Nations Global Compact.

We commit to playing our part in protecting the environment and aim to continually enhance our environmental and energy performance. We will allocate sufficient resources to support our environmental and energy management.

This policy, along with information about our environmental commitments and objectives, are made available to our colleagues, clients and wider stakeholders via the Irwin Mitchell website and colleague intranet. Our Policy

2   Our Policy

The following objectives have been set to manage the environmental impacts of our organisation.

2.1   Reporting and certifications

We are committed to accountability and where appropriate, transparency in our environmental performance. To ensure continual improvement and alignment with best practices we will:

- Comply with the ISO 14001: 2015 – Environmental Management and ISO 50001: 2018 Energy Management certifications in addition to all relevant environmental legislation
- Use our management systems to measure and report on the energy and environmental performance of our organisation
- Regularly review (annually as a minimum) the metrics and measures used to evaluate our environmental performance
- Publish information on progress towards our key objectives at least annually via our Responsible Business report and audited accounts.

2.2   Sustainable Offices

- Integrate environmental sustainability principles into our property strategy – for example consideration for green building certifications and maintaining IM offices in an environmentally sensitive way
- Maintain 100% renewable electricity across our leasehold offices wherever possible
- Implement energy-saving measures where possible such as LED lighting and automatic shut-off systems for equipment. We will regularly monitor and review energy consumption to identify opportunities for improvement
- Our energy management system supports the purchase of energy efficient products and services and encourages performance improvement
- Control and seek to minimise printing volumes across the Group, including by the continued adoption of digital solutions
- Prevent [avoidable] pollution and protect the environment by minimising water consumption, promoting waste minimisation and using effective waste segregation and recycling procedures.

2.3   Business travel

We recognise business travel as a significant contributor to our corporate carbon footprint and aim to minimise the environmental impact of travel by adopting the following principles:

- Measure and monitor business travel (including Partner vehicle fleet) emissions and report them as part of our overall environmental performance
- Communicate the Sustainable Travel Policy and its principles to all colleagues across the business

- Offer various travel-related benefits to colleagues such as the Cycle to Work and EV salary sacrifice schemes.

2.4 Supply chain

We acknowledge that our environmental impact extends beyond our direct operations and into our supply chain. We will work collaboratively with suppliers, contractors, and partners to:

- Assess the environmental performance of key suppliers by evaluating them against the Sustainable Procurement Policy and Supplier Code of Conduct
- Engage with suppliers on environmental sustainability objectives as appropriate.
- Capture supplier-specific data on environmental impact where possible and to evaluate progress along our Roadmap to Net-Zero
- Prioritise more sustainable products and services where feasible
- Support design activities that consider energy performance improvement.

2.5 Stakeholder engagement

We believe that meaningful engagement with stakeholders is essential to achieving our environmental and driving continual improvement. We will:

- Seek opportunities to work with our clients on their environmental aims where appropriate
- Raise awareness of environmental and energy management responsibilities by communicating with all colleagues across IM Group
- Involve colleagues in environmental initiatives, providing training and awareness sessions where possible and encouraging sustainable behaviours
- Communicate our environmental goals, performance, and progress through regular reporting and updates, ensuring stakeholders are informed and involved
- Demonstrate our commitment to high environmental standards in our communities
- Collaborate with external organisations on sustainable development. For example, Irwin Mitchell is a signatory to the United Nations Global Compact and we align our activities with the 17 Sustainable Development Goals (**"SDGs"**).

3 Our expectations

The Group expects all colleagues to comply with applicable environmental requirements, prevent pollution and minimise the environmental impacts within their control and applicable to their role at Irwin Mitchell.

Signed

Craig Marshall
Group Chief Executive
December 2025
