

RENEWABLES YOUR SUSTAINABLE EQUIPMENT PARTNER

WHY CHOOSE KENNARDS HIRE AS YOUR RENEWABLES PROJECT PARTNER?

PARTNERSHIP

We work closely with you to understand and contribute to improving your equipment hire experience through expert advice, quality equipment and safety compliance, resulting in better commercial and sustainable outcomes for your project.

RESPONSIVENESS

As a large and independent, nimble family business, we're flexible, able to make quick decisions and respond to changing needs of your renewables projects.

COVERAGE

With over 190 branches and sites throughout Australia and New Zealand, we're sure to have people and assets close to your projects no matter where they are located.

EFFICIENCY

EasyTrak, our proprietary equipment management platform, provides visibility of your hire equipment usage enabling us to identify and recommend utilisation improvements resulting in reduced hire costs and safer operations.

EASE

We do what it takes to make equipment hire easy; whether that's hours of operation, simplified paperwork or close on-site relationships with your project teams.

EQUIPMENT

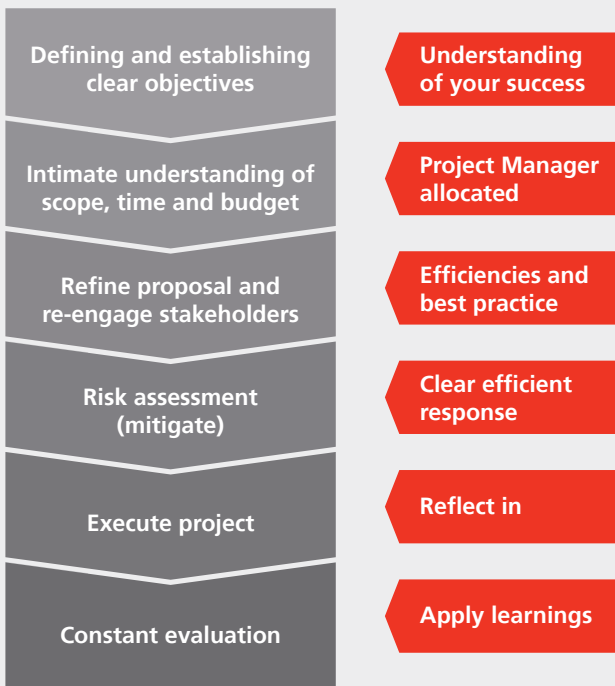

We offer quality brands and a broad range to ensure you only need a single source of equipment hire. Typical equipment for renewables projects include site accommodation, telehandlers, generators, boomlifts and lighting towers.

SINGLE POINT OF CONTACT

Your allocated renewables project partner, whether that be a local Branch Manager, dedicated Account Manager or even an on-site Project Manager, will take full responsibility of our assets on-site to ensure you don't need to be concerned with:

- Sourcing of equipment.
- Co-ordination of equipment deliveries and logistics.
- Equipment servicing, maintenance and breakdown response.
- Co-ordination of running maintenance such as refueling and water refills, fluid and effluent pump outs, etc.
- Utilisation reporting and future recommendations.
- Accounts and invoicing.

PROVEN PROJECT DELIVERY

WELLINGTON SOLAR FARM, NSW

Lightsource BP set out to construct a 200MW solar farm on 136 hectares of agricultural land in the Central West of NSW. As the Principle Hire Equipment Supplier, Kennards Hire supplied and installed a full site and office compound and facilities for the site to operate.

Regular site visits by a dedicated Project Manager, ensured the project progressed smoothly in regard to the wide range of equipment required at the various stages.

Our EasyTrak telematics system was utilised, primarily for geo-location of equipment on the sprawling site, but also provided 'visibility' of the equipment and the project, when our Project Manager was based remotely.

MURRA WARRA WIND FARM, VIC

Working with primary construction partner, Zenviron, on behalf of GE Renewables, the Murra Warra Wind Farm is a project installing 99 wind turbines across 4250 hectares of rural, western Victoria farmland. Kennards Hire provided a site compound and associated facilities and services for Zenviron to base their Project Team and sub-contractors. Remote facilities, such as 'crib huts', were mobilised by Kennards Hire, based on the staged project progress, along with site equipment such as earthmoving, telehandlers, generators and all-terrain forklifts. We also arrange for all equipment to be serviced and maintained on-site, including fit-for-purpose, re-engineered shipping containers with a mounted dome roof, associated services and all-weather working facilities. A dedicated Project Manager provided multiple site visits each week to ensure our equipment was keeping the project moving and continued to provide tailored solutions to maintain a high level of customer service and act as an extension of the Zenviron project team.

COMPLIANCE

SAFETY

Through our Plant Portal, anyone on-site can access critical information that optimises the site and equipment, including:

- Instant Access via QR Code
- Service History
- Risk Assessments
- Instructional Videos
- Operators Manuals

In addition to understanding and adhering to your specific site safety requirements and protocols, Kennards Hire can also undertake a site assessment to ensure:

- Our operations eliminate risks to people, equipment and environment where possible.
- Our servicing and maintenance staff are equipped with all appropriate accreditations and safety gear when visiting your project sites.

ENVIRONMENT & SUSTAINABILITY

Our operational activities contribute to decarbonising the supply chain through:

- Project site testing and monitoring equipment.
- Noise and site pollution mitigation advice and equipment.
- Decarbonising the supply chain through:
 - » Utilising hybrid technologies where practical and possible.
 - » Young equipment fleet for optimum emissions efficiencies.
 - » Timely water, fuel and waste management with reporting from EasyTrak.
 - » Efficient fleet scheduling enabling our delivery vehicles to spend less time on the road helping to minimise carbon emission output.
