

INFRASTRUCTURE SOLID FOUNDATIONS

WHY CHOOSE KENNARDS HIRE AS YOUR INFRASTRUCTURE PROJECT PARTNER?

EQUIPMENT

We offer quality brands and a broad range to ensure you only need a single source of equipment hire. Typical equipment for infrastructure projects include project site compounds, site testing and monitoring, lifting and materials handling, concrete equipment, lighting towers, pumps, access, traffic management and a broad range of general tools and equipment.

TRUSTED PARTNER

We work closely with you to understand and contribute to improving your equipment hire experience including project goals, timing and compliance requirements, resulting in better commercial outcomes.

RELIABILITY & RESPONSIVENESS

As a large and independent, nimble family business, we're flexible, able to make quick decisions and respond to the changing needs of your projects and business overall.

COVERAGE

With over 190 branches and sites throughout Australia and New Zealand, we're sure to have people and assets close to your projects no matter where they are located.

EASE

We do what it takes to make equipment hire easy; whether that's hours of operation, simplified paperwork or close on-site relationships with your teams.

EFFICIENCY

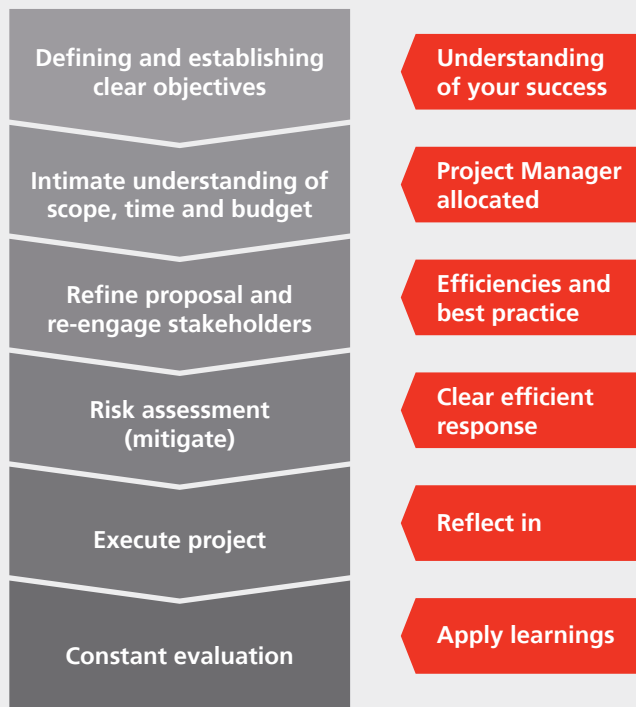

EasyTrak, our proprietary equipment tracking and management platform, provides visibility of your hire equipment usage enabling us to identify and recommend utilisation improvements resulting in reduced hire costs.

SINGLE POINT OF CONTACT

Your allocated infrastructure project partner, whether that be a local Branch Manager, dedicated Account Manager or even an on-site Project Manager, will take full responsibility of our assets on-site to ensure we keep you moving with:

- Sourcing of equipment.
- Co-ordination of equipment deliveries and logistics.
- Equipment servicing, maintenance and breakdown response.
- Co-ordination of running maintenance such as refueling and water refills, fluid and effluent pump outs, etc.
- Utilisation reporting and future recommendations.
- Accounts and invoicing.

PROVEN PROJECT DELIVERY

A CONCRETE SOLUTION FOR LIGHT RAIL

The John Holland CPB (JHCPB) joint venture were tasked with the design and construction of the first stage of the light rail network in Canberra. Environmental factors, quality of finish and project timeframes all had to be taken into consideration for the profiling of the concrete surface of the main track slab and services trench, to accommodate a membrane, before tracks could be installed. On our recommendation, multiple techniques, such as grinding and wet and dry sandblasting, were trialled and results demonstrated by our Concrete Care team to the project engineering team. Kennards Hire provided all the necessary equipment to support the chosen profiling process, including air compressors, blasting material, and extra parts such as seals, nozzles and hoses to minimise downtime as a result of wear and tear throughout the process.

PARTNERING IN A HIGHWAY BY-PASS

The construction supplier for a \$630 million NSW Government funded highway by-pass project on the NSW South Coast, was looking for more than just an equipment supplier. They were seeking a true partner, to help provide the necessary control and efficiencies, ensuring adherence to the project timeline and budget. Kennards Hire was engaged, via a dedicated Project Manager, to oversee the day-to-day co-ordination of the hired equipment. Our Project Manager worked closely with the customer around the data provided from the EasyTrak monitored equipment, to provide ongoing cost savings and efficiencies, and to uphold site compliance. The system included monitoring of equipment for geo-location, fuel and fluid levels and operator behaviour.

SAFETY

Through our Plant Portal, anyone on-site can access critical information that optimises the site and equipment, including:

- Instant Access via QR Code
- Service History
- Risk Assessments
- Instructional Videos
- Operators Manuals

In addition to understanding and adhering to your specific site safety requirements and protocols, Kennards Hire can also undertake a site assessment to ensure:

- Our operations eliminate risks to people, equipment and environment where possible.
- Our servicing and maintenance staff are equipped with all appropriate accreditations and safety PPE gear when visiting your project sites.
- We provide you with the right equipment to suit site requirements and operating conditions.

ENVIRONMENT & SUSTAINABILITY

We understand the need to conduct business in an environmentally responsible and sustainable way to reduce carbon emissions and minimise environmental impact.

- Project site testing and monitoring equipment.
- Noise and construction site pollution mitigation advice and equipment.
- Decarbonising the supply chain through:
 - » Utilising hybrid technologies where practical and possible.
 - » Young equipment fleet for optimum emissions efficiencies.
 - » Timely water, fuel and waste management with reporting from EasyTrak.
 - » Efficient fleet scheduling enabling our delivery vehicles to spend less time on the road helping to minimise carbon emission output.
