

CASE STUDY

Arlo G. Lott Trucking Inc., based in Jerome, Idaho, was looking for a maintenance platform that simplified their daily operations. They needed a solution that allowed them to easily access detailed data, like tracking tire performance by brand and analyzing part longevity. Love's Fleet V.I.E.W. delivered the tools they needed to make smarter, data-driven maintenance decisions.

“ In the first 6 months, we were able to identify our highest costs and act on those. Many came as a surprise, so now being able to anticipate expenses has shown significant cost savings. The Love's Fleet V.I.E.W. team have been so great to work with. Any suggestion we have, or a need that arises, they are able to implement the update quickly. ”
