

CASE STUDY

Reliable Carriers, based in Canton, Michigan, was looking for greater visibility into their vehicle maintenance operations and a more effective way to manage their shops. They needed a solution that could provide real-time insight into which vehicles in their yards required attention. Just as important, they wanted a platform that could seamlessly connect their entire workflow, from technicians using tablets in the shop to the accounting team handling back-office operations.

“ We have been blown away by how much this platform has changed our fleet and how we operate. 100% recommend this platform to any fleet, especially those that have their own shop or multiple shops. ”

Brian Abrams,
Director of Technology
Reliable Carriers
