

College of ENGINEERING

Leo Kempel, DEAN

The College of Engineering prepares its students to solve technical, as well as social, economic, and global problems while instilling the essence of engineering – the iterative process of designing, predicting performance, building, and testing. Our engineering programs provide future engineers with firm knowledge and understanding of the fundamental engineering sciences, of engineering methods for the application of this knowledge and the project management and communications skills to bring designs to fruition. Programs require a strong base in mathematics, computing, and the sciences as the tools of the engineer. An engineering education provides a teams-based, systems approach to societal problems and therefore prepares students for a wide range of career options, including those outside engineering.

UNDERGRADUATE PROGRAMS

Programs With a Major in the Engineering Professional Fields

The Bachelor of Science degree may be earned in programs designed to prepare students for work in biosystems engineering, chemical engineering, civil engineering, computer engineering, electrical engineering, environmental engineering, materials science and engineering, and mechanical engineering.

Programs With a Major in the Engineering Sciences

The Bachelor of Science degree may also be earned in engineering sciences with a major in computer science or applied engineering sciences. A required cognate combines the Computer Science major with studies such as business management, the social and behavioral or physical sciences, or a foreign language. The Applied Engineering Sciences major is an interdisciplinary program that combines a broad foundation in core engineering disciplines with a required concentration area in business law, computer science, packaging, supply chain management, technical sales, or media and information.

Engineering Study Abroad

The field of engineering increasingly requires a global perspective. Opportunities exist for students to study in a variety of countries. Students often take major and university requirements during their studies abroad, so the international experience need not delay a student's progress toward graduation. Students interested in studying abroad should contact the Engineering Study Abroad office as early as possible.

Minors

Students who are enrolled in bachelor's degree programs in the college may elect the *Minor in Environmental and Sustainability Studies*. For additional information, refer to the statement on *Minor in Environmental and Sustainability Studies* in the *College of Natural Science* section of this catalog.

Students who are enrolled in bachelor's degree programs in The Eli Broad College of Business, the College of Communication Arts and Sciences, and the College of Engineering may elect a *Minor in Information Technology*. For additional information, refer to the statement on *Minor in Information Technology* in *The Eli Broad College of Business* section of this catalog or contact The Eli Broad College of Business.

Students who are enrolled in the Bachelor of Science degree in Computer Science in the College of Engineering may elect a *Minor in Game Design and Development*. For additional information, refer to the statement on *Minor in Game Design and Development* in the *Department of Media and Information* section of this catalog.

Experiential Education - The Center for Spartan Engineering

The College of Engineering offers a variety of opportunities for students to gain real-world experience in the field of engineering. These programs prepare students for work in industry or to enter graduate programs in engineering, medicine, law, or business. They include cooperative education, engineering internships and undergraduate research.

Cooperative Engineering Education is a program of alternating full-time employment in industry and full-time study on campus. Employment provides practical on-the-job experience by exposing students to types of work done by engineers. Locations of jobs are nationwide and students must be willing to relocate temporarily.

Students are selected to participate in the program on the basis of demonstrated academic ability and a firm commitment to pursuing careers in the technical sector. Certification in the Cooperative Engineering Education program requires a minimum of three semesters of full-time employment in a pre-professional position that has been approved by the College of Engineering.

Engineering Internships are one-time-only, career-based experiences usually completed during the summer semester and may or may not be available for academic credit. Internships provide practical on-the-job experience in the field of engineering.

Undergraduate research opportunities are available at Michigan State University and throughout the United States. Students who are considering graduate school are encouraged to participate in an undergraduate research program for exposure to research opportunities and protocol at the graduate level.

Students interested in any of these programs should contact The Center for Spartan Engineering in Room 1340 Engineering Building.

Honors Study

The College of Engineering encourages honors students to develop distinctive undergraduate programs in either the engineering sciences or in the fields offered by the several professional programs. A member of the faculty is selected to serve as advisor to Honors College students in each major field, and will help the student plan a rigorous and balanced program which will also reflect the student's special interests and competencies.

Accreditation

The following degree programs have been accredited by ABET, Inc.: Biosystems Engineering, Chemical Engineering, Civil Engineering, Computer Engineering, Computer Science, Electrical Engineering, Environmental Engineering, Materials Science and Engineering, and Mechanical Engineering.

Registration as a Professional Engineer

In Michigan, the State Board of Registration for Professional Engineers provides an opportunity for students during their senior year to take the first half of a sixteen-hour, two-part examination as the first step toward registration, provided the degree is to be awarded within six months and the degree program is one that has been accredited by ABET or determined as equivalent by the State Board. After a minimum of four years of experience, the applicant may take the second half of the examination.

Freshmen

Students admitted to the university are enrolled in the Neighborhood Student Success Collaborative, but may declare a pre-engineering major preference in the College of Engineering. Such students are guided by a professional advisor from the college. All students are encouraged to review their progress with an advisor each semester. Students become eligible for admission to the college upon completion of the requirements listed below in the *Admission to the College* section of this catalog.

Students interested in engineering but not yet sure of a major may be an Engineering No-Preference major until attaining 56 credits, but students are encouraged to make their major selection as early as possible.

Students who elect a pre-engineering major preference should be strongly prepared in mathematics and sciences. Additional work in these areas is highly desirable and may make advanced placement in courses possible. Students entering with less than the minimum mathematics prerequisites may take some of the necessary courses after entering the University. However, such students will need additional time to complete the work for the degree.

The Engineering CoRe Experience

The CoRe Experience integrates first year engineering academics and co-curricular/residential activities to support the academic, professional, and personal growth of engineering students during their first year at Michigan State University. CoRe seeks to demonstrate to students the importance of engineering and the positive impact that engineers make on society and the world around them. Along with community and corporate partners, we bring real-world expertise and challenges into the classroom and residential environment, reinforcing the relevance of engineering to solving global challenges.

CoRe's academic program is based on the principle that engagement in meaningful engineering experiences early in students' undergraduate careers supports their success and persistence to graduation. Through our courses, EGR 100: Introduction to Engineering Design and EGR 102: Introduction to Engineering Modeling, we strive to engage students across the disciplines in team-based projects that pique their interest and give them a window into what professional engineering really is. CoRe co-curricular activities connect students to each other, to the College of Engineering, and to corporate partners, helping students persist and succeed as engineering students and campus citizens.

Supportive Services

The college provides a full range of supportive services including professional academic advising, tutoring, services for underrepresented and female students, career guidance and employment assistance, faculty connections, and peer mentors.

Admission to the College

Admission to the College of Engineering and a specific major provides access to enroll in certain courses required for the major. Enrollments in the College of Engineering are limited.

Admission is based on the cumulative grade–point average of all courses taken and a grade–point average calculated on mathematics, physical and biological sciences, and engineering courses.

For additional information, students should contact the Office of the Associate Dean for Undergraduate Studies, College of Engineering.

Minimum criteria for admission to the college are:

1. Completion of at least 12 credits of Michigan State University courses, including at least 6 credits in mathematics, physical

and biological sciences, and engineering for freshmen and sophomores, and at least 10 credits in mathematics, physical and biological sciences, and engineering for juniors and seniors.

- 2. Completion of Mathematics 132 and 133.
- A minimum grade-point average of 2.0 in all mathematics 3. courses.
- 4. Completion of Chemistry 141 or 151 or approved substitution or waiver. Computer Science majors are not required to fulfill this requirement.
- 5. Completion of Physics 183.
- Completion of Engineering 102 or Computer Science and 6. Engineering 231 or Computer Science and Engineering 220 or approved substitution or waiver.
- 7. Completion of Engineering 100.

Freshmen and sophomores who have declared specific engineering majors (excluding Engineering No-Preference) are automatically reviewed at the end of every semester, and are either admitted or informed of their progress. Others may apply for admission during each semester, and applications will be reviewed after the end of each semester. Students must be admitted to a degree-granting college at the time they have completed 56 credits.

Admission to a Second Bachelor's Degree Program

Students seeking admission to a second bachelor's degree program must meet the same requirements as for admission to the college.

Graduation Requirements for All Majors

The University requirements for bachelor's degrees as de-1. scribed in the Undergraduate Education section of the catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Computer Science and the Bachelor of Science degree in Applied Engineering Sciences; and 128 credits, including general elective credits, are required for the Bachelor of Science degree in the other Engineering majors.

Students who are enrolled in majors leading to the Bachelor of Science degree in the College of Engineering may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses:

- One of the following courses: Biological Science 161; a. Plant Biology 105: Entomology 205: Microbiology and Molecular Genetics 201, 301; Physiology 250; Zoology 141.
- b. Two of the following courses: Chemistry 141, Chemistry 151, Physics 183 or 183B, Physics 184.
- One of the following laboratory courses: Plant Biology C. 106; Chemistry 161; Physics 191.

Credits earned in the alternative track may also be counted toward college and major requirements for the Bachelor of Science degree.

- 2. The requirements of the College of Engineering for the Bachelor of Science degree that are listed below:
 - Mathematics 132, 133, 234, and 235. Computer Scia. ence, and Applied Engineering Sciences majors are not required to complete Mathematics 235.
 - Chemistry 141 or 151. Computer Science majors are b. not required to complete Chemistry 141 or 151.
 - Physics 183 or 183B and 184. c.

- Engineering 102. Computer Science, Computer Engid. neering, and Electrical Engineering majors are not required to complete Engineering 102.
- e. Engineering 100.

Students who are enrolled in bachelor's degree programs in the College of Engineering may elect a Specialization in Environmental Studies. For additional information, refer to the Specialization in Environmental Studies statement in the College of Natural Science section of this catalog.

Students who are enrolled in the Bachelor of Science Degree in Computer Science in the College of Engineering may elect a Specialization in Game Design and Development. For additional information, refer to the Specialization in Game Design and Development statement in the Department of Telecommunication, Information Studies and Media section of this catalog.

Students who are enrolled in bachelor's degree programs in the College of Engineering may elect a Specialization in Information Technology. For additional information, refer to the Specialization in Information Technology statement in The Eli Broad College of Business section of this catalog.

APPLIED ENGINEERING SCIENCES

The Applied Engineering Sciences major provides undergraduate opportunities leading to the Bachelor of Science degree. The core goal of applied engineering sciences is to prepare technically competent, broad-based engineering graduates who have acquired a systems perspective for problem-solving and business expertise. The program provides a broad foundation in science and mathematics, engineering, and business management and is designed to develop graduates who can apply the rigor of their technical education to diverse problems and settings. The program is structured to establish skills in areas such as effective management, contemporary technical issues, deployment of new technologies, resolving ethical dilemmas, effective communication across technical disciplines both in oral and written communication, and lifelong learning.

Requirements for the Bachelor of Science Degree in Applied Engineering Sciences

The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Applied Engineering Sciences. The University's Tier II writing requirement for the Applied Engineering Sciences major is met by completing Applied Engineering Sciences 410. That course is referenced in item 3. a. below

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

- The requirements of the College of Engineering for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.
- 3. The following requirements for the major:

MINOR IN ENERGY

The Minor in Energy, administered by the College of Engineering, provides students with a foundation in energy science that focuses on topics of fundamental physical principles guiding energy generation, utilization, conservation, engineering applications and the impact of energy within a societal and geological context. Students gain a perspective in energy science that is applicable to many disciplines and highly interdisciplinary. It offers opportunities for students to prepare to work in industry, research, or government, as well as preparation for graduate studies in energy science.

The minor is available as an elective to students who are enrolled in bachelor's degree programs in the College of Engineering. With the approval of the department and college that administer the student's degree program, the courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor's degree. At least 9 credits counted towards the requirements for this minor must be unique. Unique credits must not be used to fulfill another university, college, or major requirement in the student's program.

Students who plan to complete the requirements of the minor should consult the undergraduate adviser in the College of Engineering. Students accepted into the minor must be admitted to the College of Engineering and have completed items 1. and 2. of the requirements stated below. Enrollment for some courses may not be available and may be limited. Application forms are available at www.egr.msu.edu/academics/multi-disciplinary.

Requirements for the Minor in Energy

Complete a minimum of 21 credits from the following.

	1		5	CREDITS
1.	One of	the fol	llowing course (3 credits):	
	BE	230	Engineering Analysis of Biological Systems	3
	CHE	201	Material and Energy Balances	3
	MSE	250	Materials Science and Engineering	3
2.			llowing courses (3 or 4 credits):	
	BE	351	Thermodynamics for Biological Engineering	3
	CHE	321	Thermodynamics for Chemical Engineering	4
	ME	201	Thermodynamics	3
	MSE	310	Phase Equilibria in Materials	3
3.			llowing courses (3 credits):	0
	BE ECE	456 202	Electric Power and Control	3 3
	ECE	202 345	Circuits and Systems II	3
4.			Electronic Instrumentation and Systems	3
4.	ME	417	Design of Alternative Energy Systems	3
	MSE	410	Materials Foundations for Energy Applications	3
5.			llowing courses (3 credits):	5
0.	AESC		Sustainable Systems Analysis	3
	CSUS		Introduction to Sustainability	3
	EEP	255	Ecological Economics	3
6.			llowing courses (6 to 8 credits):	
	AFRE		Economics of Environmental Resources	3
	BE	469	Sustainable Bioenergy Systems	3

	quirem	ent 6. I	Not all courses will be available to all majors and students	

quirement 6. Not all courses will be available to all majors and students must meet all course prerequisites and restrictions.

TEACHER CERTIFICATION OPTION

A computer science disciplinary minor in the College of Engineering is available for teacher certification.

Students who elect the computer science disciplinary minor must contact the Department of Computer Science and Engineering.

For additional information, refer to the statement on *TEACHER CERTIFICATION* in the *Department of Teacher Education* section of this catalog.

GRADUATE STUDY

The College of Engineering offers programs leading to the Master of Science and Doctor of Philosophy degrees in the following fields:

> biomedical engineering chemical engineering civil engineering computational mathematics, science and engineering computer science electrical engineering engineering mechanics environmental engineering materials science and engineering mechanical engineering

Programs leading to the Master of Science and Doctor of Philosophy degrees in biosystems engineering are offered through the College of Agriculture and Natural Resources.

All programs are designed to provide a fundamental approach to basic engineering principles with emphasis on scientific methods, and to lead to careers in engineering research and development or teaching. Advanced work in the major field of specialization is combined with supporting courses in one or more other fields to develop individuals capable of creative work in engineering science and areas of application.

Students who are enrolled in Master of Science degree programs in the Department of Biosystems and Agricultural Engineering may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the *College of Veterinary Medicine* section of this catalog.

Master of Science

In addition to meeting the requirements of the University as described in the *Graduate Education* section of this catalog, students must meet the requirements specified below.

Admission

Regular Status. Admission to a master's degree program with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean, upon consideration of the likelihood that the applicant will be able to pursue a master's program successfully without taking collateral courses. As evidence of eligibility for admission, the student may offer any of the following:

- a. The possession of a bachelor's degree in an accredited program in engineering with a grade–point average not lower than 3.00 for the final two years of the undergraduate program, or with standing in the upper quarter of the graduating class in the student's major.
- b. The possession of a bachelor's degree in engineering or a related field where the applicant has shown very high academic achievement, as certified by the department.
- c. Evidence of ability and resolution to complete a master's program, as attested by the department upon review of the applicant's academic record, test scores, experience, reference statements, professional qualifications, proposed studies, and other relevant information.

Provisional Status. Admission to a master's degree program with provisional status may be granted by the department, subject to the approval of the dean:

- a. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or
- b. To an applicant whose record is incomplete.

If collateral courses are required, the minimum acceptable grades and the semesters by which those courses must be completed will be specified on the admission form. The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as certified by the department and approved by the dean.

Program Filing

The student's program of study must be approved before the student completes 6 credits of graduate work in order for the student to continue to enroll in the master's degree program.

For any independent study or selected topics course that is included in the student's approved program of study, the subject material and the instructor must be specified.

Modification of Program

With reference to the student's approved program of study, none of the following types of changes will be approved:

- Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).
- 2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.
- Adding or deleting a course which the student dropped after the middle of the semester and for which "W" or "N" or "0.0" was designated.
- 4. Adding or deleting a course during the final semester of enrollment in the master's degree program.

Requirements for the Master of Science Degree

The student must:

- . Complete a minimum of 30 credits in 400–, 800–, and 900–level courses under either Plan A (with thesis) or Plan B (without thesis). Courses below the 400 level may not be counted toward the requirements for the degree.
 - a. Requirements for Plan A: The student must:
 - (1) Complete a minimum of 20 credits in courses at the 800–900 level.
 - (2) Complete at least 4, but not more than 8, credits in Master's Thesis Research (course number 899 in the department of the student's major).
 - (3) Provide to the major professor and to the department a hard-bound copy of the thesis made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangements for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.
 - b. Requirements for Plan B: The student must:
 - (1) Complete a minimum of 18 credits in courses at the 800–900 level.
- 2. Pass the final certifying examination administered by the student's department. It is the student's responsibility to obtain detailed information about this examination from the department.

Academic Standards

- 1. **Grades**. The student must earn a grade of 2.0 or higher in each course in the approved program of study. The student must repeat any course for which the grade earned was below 2.0.
- 2. **Cumulative Grade–Point Average**. The student must maintain a cumulative grade–point average of at least 3.00 in the courses in the approved program of study.
- Probational Status. A student is placed on probational status if the student's cumulative grade-point average for the courses in the approved program of study is below 3.00. A student in probational status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.
- 4. Retention In and Dismissal From the Program.
 - a. **Cumulative Grade–Point Average**. Should a student's cumulative grade–point average fall below 3.00 after having completed 16 or more credits in courses in the approved program of study, the student may be enrolled in probational status in the master's degree program for one additional semester. If at the end of the additional semester the student's cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the master's degree program. If at the end of the additional semester the student's cumulative grade–point average is still below 3.00, the student will be dismissed from the program.
 - b. Academic Progress and Professional Potential. Each student's academic progress and professional potential are evaluated by March 15 of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the master's degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

Transfer Credits

As a member of the Michigan Coalition for Engineering Education (MCEE), Michigan State University will accept up to one less than half of the course credits required for the Master of Science degree program in the College of Engineering in transfer from other MCEE member institutions provided that (1) the student earned a grade of at least 3.0, or the equivalent, in the related courses; (2) the credits were not earned in research or thesis courses; and (3) the total number of credits accepted in transfer from MCEE member institutions and from other institutions does not exceed one less than half of the credits required.

Doctor of Philosophy

In addition to meeting the requirements of the university as described in the *Graduate Education* section of this catalog, students must meet the requirements specified below.

Admission

Regular Status. Admission to a doctoral degree program with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean, upon consideration of the likelihood that the applicant will be able to pursue a doctoral program successfully without taking collateral

courses. As evidence of eligibility for admission, the student may offer any of the following:

- a. The possession of a master's degree in engineering or a related field.
- b. The completion of the equivalent of a master's degree program in the major field.
- c. Evidence of ability and resolution to complete a doctoral program, as attested by the department upon review of the applicant's academic record, test scores, experience, reference statements, professional qualifications, proposed studies, and other relevant information.

Admission to the doctoral program without a master's degree, or the equivalent thereof, will require special consideration by the department and the dean.

Provisional Status. Admission to a doctoral degree program with provisional status may be granted by the department, subject to the approval of the dean:

- a. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or
- b. To an applicant whose record is incomplete.

If collateral courses are required, the minimum acceptable grades and the semesters by which those courses must be completed will be specified on the admission form. The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as determined by the department and approved by the dean.

Guidance Committee

The student's guidance committee is appointed by the department chairperson in consultation with the student and the appropriate faculty members, and with the approval of the dean. At least two members of the guidance committee shall be from the major department and at least one member shall be from a department outside of the major department. The chairperson of the guidance committee will be appointed by the department chairperson after consultation with the student and the person recommended to chair the committee.

Guidance Committee Report

The student's program of study shall be submitted for approval to the department and to the Dean by no later than the end of the student's second semester of enrollment in the doctoral program. For any independent study or selected topics course that is included in the student's program of study, the subject material and the instructor must be specified.

The student's program of study must be approved in order for the student to continue to enroll in the doctoral degree program beyond the second semester.

Modification of Program

With reference to the student's approved guidance committee report, none of the following types of changes will be approved:

- Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).
- 2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.
- Adding or deleting a course which the student dropped after the middle of the semester and for which "W" or "N" or "0.0" was designated.
- 4. Adding or deleting a course during the final semester of enrollment in the doctoral degree program.

Requirements for the Doctor of Philosophy Degree

The student must:

- 1. Pass the qualifying examination administered by the student's department. It is the student's responsibility to obtain detailed information about this examination from the department.
- Pass the doctoral comprehensive examination at least six months prior to the final oral examination in defense of the dissertation. The examination may be retaken no more than twice. It is the student's responsibility to obtain detailed information about this examination from the department.
- Provide to the major professor and to the department a hard-bound copy of the dissertation made from the original unbound manuscript submitted to the Office of the Graduate School. Arrangements for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.

Academic Standards

- 1. **Grades**. The student must earn a grade of 2.0 or higher in each course in the approved guidance committee report, including collateral courses and courses accepted in transfer. The student must repeat any course for which the grade earned was below 2.0.
- Cumulative Grade–Point Average. The student must maintain a cumulative grade–point average of at least 3.00 in courses in the approved guidance committee report, with the exception of collateral courses and courses accepted in transfer.
- Deferred Grades. A student may accumulate no more than 3 deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study.
- 4. **Probational Status**. A student is placed on probational status if either or both of the following conditions apply:
 - a. The student's cumulative grade-point average for the courses in the approved guidance committee report is below 3.00.
 - b. The student has accumulated more than three deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study.

A student in probational status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.

5. Retention In and Dismissal From the Program.

- a. **Cumulative Grade-point Average**. Should a student's cumulative grade-point average fall below 3.00 after having completed half of the courses in the approved guidance committee report, the student may be enrolled in probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student's cumulative grade-point average is 3.00 or higher, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student's cumulative grade-point average is still below 3.00, the student will be dismissed from the program.
- b. **Deferred Grades**. Should a student accumulate more than 3 deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study, the student may be enrolled on probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student has no more than 3 deferred grades, the student may continue to enroll in the

doctoral degree program. If at the end of the additional semester the student still has more than 3 deferred grades, the student will be dismissed from the program.

c. Academic Progress and Professional Potential. Each student's academic progress and professional potential are evaluated by March 15 of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the doctoral degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

GRADUATE SPECIALIZATION IN ENVIRONMENTAL TOXICOLOGY

The College of Engineering, the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine administer the Graduate Specialization in Environmental Toxicology. The College of Agriculture and Natural Resources is the primary administrative unit. For additional information, refer to the *Graduate Specialization in Environmental Toxicology* statement in the *College of Agriculture and Natural Resources* section of this catalog.

DEPARTMENT of BIOMEDICAL ENGINEERING

The Department of Biomedical Engineering's mission is to apply engineering principles and design concepts to advance healthcare practices, including medical diagnosis, treatment, and monitoring. A particular focus of the research in biomedical engineering is the cross-cutting topic of translational research, defined as engineering research that makes findings from basic science useful for practical applications that improve human health. The department is a focal point for technological innovations in healthcare technology applied to medical needs as identified by physicians, nurses, and health scientists in hospital, clinic, and home settings.

GRADUATE STUDY

BIOMEDICAL ENGINEERING

The Master of Science Degree in Biomedical Engineering prepares graduates to review technical literature related to a biomedical engineering research problem and communicate those results through oral presentations and written publications.

Master of Science

In addition to meeting the requirements of the university, and of the College of Engineering, students must meet the requirements specified below.

Admission

For admission to the master's degree in biomedical engineering on regular status, the student must:

- have a bachelor's degree in biomedical engineering or re-1. lated field:
- have a grade-point average that would indicate success in 2. graduate study.

Applicants who are admitted without a bachelor's degree in biomedical engineering may be required to complete collateral course work to make up deficiencies. Collateral course work will not count towards the fulfillment of degree requirements.

International applicants are required to submit their scores on the Graduate Record Examination (GRE).

Requirements for the Master of Science Degree in **Biomedical Engineering**

The master's degree program in biomedical engineering is available under either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree. The student's program of study is selected in consultation with a faculty advisor and the graduate program director. No more than 6 credits of 400-level courses may be counted towards the degree requirements.

CREDITS Student's must complete the following core course: BME 803 Research Methods .

Additional Requirements for Plan A

Completion of the following course: 1.

- BME 892 Biomedical Engineering Seminar . Complete of at least 4, but not more than 8, credits of BME 899 Master's 2. Thesis Research
- Pass a final oral examination in defense of the thesis. 3

Additional Requirements for Plan B

Pass a final examination or evaluation.

Doctor of Philosophy

The Doctor of Philosophy degree in Biomedical Engineering prepares graduates to review technical literature related to a biomedical engineering research problem and communicate those results through oral presentations and written publications.

In addition to meeting the requirements of the university, and of the College of Engineering, students must meet the requirements specified below.

Admission

For admission to the doctoral degree in biomedical engineering on regular status, the student must:

- have a bachelor's degree in biomedical engineering or re-1. lated field;
- 2. have a grade-point average that would indicate success in graduate study.

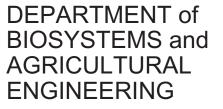

Applicants who are admitted without a bachelor's degree in biomedical engineering may be required to complete collateral course work to make up deficiencies. Collateral course work will not count towards the fulfillment of degree requirements.

International applicants are required to submit their scores on the Graduate Record Examination (GRE).

Requirements for the Doctor of Philosophy Degree in **Biomedical Engineering**

The doctoral degree program in biomedical engineering program of study is selected in consultation with a faculty advisor and the graduate program director. A minimum of 22 credits of course work beyond the bachelor's degree is required in addition to doctoral dissertation research. No more than 6 credits of 400-level courses may be counted towards the degree requirements.

				ONCEDITO	
			complete the following:		
1.	1. All of the following core courses:				
			Research Methods	3	
	BME	841	Translational Innovations Laboratory	3	
			Biomedical Engineering Seminar	1	
2.	Comp	lete 24	credits of BME 999 Doctoral Dissertation Research.		
3.			ompletion of a dissertation and final oral examination in e dissertation.		

Darrell W. Donahue, Chairperson

The Department of Biosystems and Agricultural Engineering is administered jointly by the College of Engineering and the College of Agriculture and Natural Resources.

UNDERGRADUATE PROGRAM

The department offers a Bachelor of Science degree program with a major in biosystems engineering through the College of Engineering. That program is described below.

The department also offers a Minor in technology systems management through the College of Agriculture and Natural Resources. For information about that program, refer to the statement on the Department of Biosystems and Agricultural Engineering in the College of Agriculture and Natural Resources section of this catalog.

Students who are enrolled in the Bachelor of Science degree program with a major in biosystems engineering may elect a Minor in Plant, Animal and Microbial Biotechnology. For additional information, refer to the Minor in Plant, Animal and Microbial Biotechnology statement in the College of Agriculture and Natural Resources section of this catalog.

BIOSYSTEMS ENGINEERING

Bachelor of Science

3

1

CREDITS

Biosystems engineers design solutions to technical problems that involve a critical biological component. They apply quantitative skills to create products, processes, and systems that improve human existence. Working at the interface of engineering and biology, biosystems engineers are engaged in the most important challenges of our time.

There are a wide variety of job functions and application areas for our graduates, including ecosystems protection, food safety, bioenergy, biosecurity, and human health. Biosystems engineers may, for example, design sterilization and pasteurization processes to eliminate microbial pathogens and maximize the nutritional value of our food. Other graduates may design constructed wetlands, which utilize biological systems to capture pollutants and protect our precious fresh water resources. Biosystems engineers are sought after by a wide variety of employers including food manufacturers, environmental consulting firms, health industries, and government agencies who need creative individuals to integrate principles of engineering and biology successfully.

The Bachelor of Science Degree program in Biosystems Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Requirements for the Bachelor of Science Degree in Biosystems Engineering

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Biosystems Engineering.

The University's Tier II writing requirement for the Biosystems Engineering major is met by completing Biosystems Engineering 487. That course is referenced in item 3. a below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

The requirements of the College of Engineering for the Bachelor of Science degree. 2 The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. 3 The following requirements for the major:

LINKED BACHELOR'S-MASTER'S DEGREE IN **BIOSYSTEMS ENGINEERING**

Bachelor of Science Degree in Biosystems Engineering Master of Science Degree in Biosystems Engineering

The department welcomes applications from Michigan State University Biosystems Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Biosystems Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Biosystems Engineering at the time of admission. Admission to

the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or another postsecondary accredited institution of comparable academic quality. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The department offers Master of Science and Doctor of Philosophy programs in biosystems engineering through the College of Agriculture and Natural Resources. For information about those programs, refer to the statement on the *Department of Biosystems and Agricultural Engineering* in the *College of Agriculture and Natural Resources* section of this catalog.

Students who are enrolled in Master of Science degree programs in the Department of Biosystems and Agricultural Engineering may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the *College of Veterinary Medicine* section of this catalog.

DEPARTMENT of CHEMICAL ENGINEERING and MATERIALS SCIENCE

Donald Morelli, Acting Chairperson

The undergraduate and graduate programs of the Department of Chemical Engineering and Materials Science have been training top-quality graduates for over 75 years. Graduates from the Department of Chemical Engineering and Materials Science are highly sought after for work on important technological and societal problems. The faculty is dedicated to strong classroom instruction and world-class research focused in the areas of energy and sustainability, advanced materials and nanotechnology, and biotechnology and medicine.

UNDERGRADUATE PROGRAMS

The Department of Chemical Engineering and Materials Science offers two Bachelor of Science degree programs, one in chemical engineering and one in materials science and engineering. Students learn to convert low-value raw materials into high-value products. Students learn how to analyze and understand different processes and how, at the macroscopic and molecular levels these processes result in different properties in the final product. Emphasis is placed on developing students who understand the technical aspects of production, the environmental, economic, and societal impact of engineering, and who possess a desire for lifelong learning and growth. Optional concentrations are available for students to focus their programs of study on areas of particular interest.

Graduates are trained to succeed in multidisciplinary teams that interface between disciplines. They work across a broad spectrum of fields including industrial chemicals, automotive, plastics, petroleum processing, pharmaceuticals, textiles, food, electronics, sensors, consumer goods, biomedical technology, and specialty materials of construction. Within these fields, our graduates are involved in research and development of products and processes, in the design and operation of manufacturing facilities, and in management and product quality control.

CHEMICAL ENGINEERING

Chemical engineers convert raw materials to finished products via pathways involving chemical and physical changes. The principles of mass, energy, and momentum conservation, chemical reactions, thermodynamics, and economics are applied to develop new products and to design and operate manufacturing facilities to produce products that benefit society. Chemical engineering principles are, in turn, based on the sciences of chemistry, biology, mathematics, and physics, which form the underlying foundation of the discipline.

Students in this degree program will study the application of chemical engineering principles to biochemical and biomedical systems, nanoscale devices, polymer processing, and novel energy systems. Principles of sustainability, environmentally-friendly "green" processing, entrepreneurship, and other emerging topics are also addressed in courses and concentrations.

The Bachelor of Science Degree program in Chemical Engineering is accredited by the Engineering Accreditation Commission of ABET, *www.abet.org*.

Requirements for the Bachelor of Science Degree in Chemical Engineering

 The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Chemical Engineering.

The University's Tier II writing requirement for the Chemical Engineering major is met by completing Chemical Engineering 316 and 433. Those courses are referenced in item 3. a. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading **Graduation Requirements for All Majors** in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

 The requirements of the College of Engineering for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.
 The following requirements for the major:

me		CREDITS
a.	All of the following courses:	58
	BS 161 Cell and Molecular Biology	
	CEM 151 General and Descriptive Chemistry	
	CEM 152 Principles of Chemistry	
	CEM 161 Chemistry Laboratory I	
	CEM 162 Chemistry Laboratory II	
	CEM 351 Organic Chemistry I	
	CEM 352 Organic Chemistry II

h-	and Material Systems	4 or 6
b.	One of the following:	4 OF 6
	(1) BMB 401 Comprehensive Biochemistry	
	(2) BMB 461 Advanced Biochemistry I	
	BMB 462 Advanced Biochemistry II	
c.	One of the following courses:	3
	CHE 472 Composite Materials Processing	
	CHE 481 Biochemical Engineering	
d.	One of the following courses:	3
	CEM 483 Quantum Chemistry	
	CEM 484 Molecular Thermodynamics	
e.	Technical Electives.	
	Students must complete at least 6 credits of technically oriented	
	subject-related courses approved by the student's advisor. Ac-	
	ceptable subjects include, but are not limited to, composites pro-	

cessing or biochemical engineering (in addition to that required in 3. c. above), electronic materials, environment, advanced mathematics, transport phenomena, advanced chemistry, foods, legal and regulatory issues, advanced materials, advanced biology, statistics, biomedical engineering, bioenergy, and polymers. NOTF: Elective courses in item 3. e. must include at least 3 cred

IOTE: Elective courses in item 3. e. must include at least 3 credits of engineering topics, which includes courses taught in the College of Engineering as well as courses taught in advanced mathematics, advanced chemistry, advanced biology, advanced statistics, and advanced physics. If Biochemistry and Molecular Biology 462 is taken to fulfill requirement 3.b. it will count as technical elective credit in item 3.e.

Concentrations in Chemical Engineering

In response to increasing interest in the application of chemical engineering principles to related fields, the Department of Chemical Engineering and Materials Science offers concentrations in biochemical engineering, bioenergy, biomedical engineering, environmental engineering, food science, and polymer science and engineering to students wishing an area of concentration in the degree. Concentrations are available to, but not required of, any student enrolled in the Bachelor of Science degree program in chemical engineering. The concentration will be noted on the student's transcript.

NOTE: Completing the Bachelor of Science degree in chemical engineering with a concentration may require more than 128 credits.

Biochemical Engineering

To earn a Bachelor of Science degree in Chemical Engineering with a biochemical engineering concentration, students must complete requirements 1., 2., 3. a., and 3.d. above and the following:

MATERIALS SCIENCE and ENGINEERING

Materials Science and Engineering majors learn to select and create materials used to realize engineering designs in fields such as bioengineering, microelectronics and aerospace. They also learn how to manipulate the elements of matter into the atomic arrangements that insure efficient and cost-effective materials performance, demanded by today's advanced applications.

Through the core course work, students gain the scientific and engineering foundation needed to design metallic, ceramic, polymeric, and composite materials and, in turn, components manufactured from these materials. Students may enhance the knowledge they gain in metals, ceramics, and polymers by completing a concentration in biomedical materials, manufacturing, polymers, or metallurgy. Students may also choose to enroll in electives of complementary fields such as business, electronic materials or statistics. Honors students are encouraged to request an honors option with the instructors of MSE courses listed in item 3. a. below.

The Bachelor of Science Degree program in Materials Science and Engineering is accredited by the Engineering Accreditation Commission of ABET, *www.abet.org*.

Requirements for the Bachelor of Science Degree in Materials Science and Engineering

The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Materials Science and Engineering. The University's Tier II writing requirement for the Materials Science and Engineering neering major is met by completing Materials Science and Engineering 466. That course is referenced in item 3. a. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading **Graduation Requirements for All Majors** in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

 The requirements of the College of Engineering for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. 3. The following requirements for the major:

i ne i	ronowing	j requ	irements for the major:	
				CREDITS
a.	All of t	he foll	owing courses:	41
	CE	221	Statics	
	CEM	152	Principles of Chemistry	
	CEM	161	Chemistry Laboratory I	
	ECE	345	Electronic Instrumentation and Systems	
	ME	222	Mechanics of Deformable Solids	
	MSE	250	Materials Science and Engineering	
	MSE	260	Electronic, Magnetic, Thermal and Optical	
			Properties of Materials	
	MSE	310	Phase Equilibria in Materials	
	MSE	320	Mechanical Properties of Materials	
	MSE	331	Materials Characterization Methods I 2	
	MSE	360	Fundamentals of Microstructural Design	
	MSE	370	Synthesis and Processing of Materials	
	MSE	381	Materials Characterization Methods II 2	
	MSE	466	Design and Failure Analysis (W)	
	STT	351	Probability and Statistics for Engineering 3	
			d Computer Engineering 302 and 303 may be substi-	
	tuted for	or Ele	ctrical and Computer Engineering 345.	
b.	Four o	f the f	ollowing courses:	12
	ME	477	Manufacturing Processes	
	MSE	425	Biomaterials and Biocompatibility	
	MSE	474		
	MSE	460	Electronic Structure and Bonding in Materials and Devices	
	MSE	465	Design and Application of Engineering	
			Materials	
	MSE	476	Physical Metallurgy of Ferrous and	
			Alluminum Alloys	
C.	Compl	ete at	least 6 credits from 400-level courses within the	
	Colleg	e of E	ngineering.	

Complete at least 3 credits in courses selected from a list of apd. proved technical electives available from the Department of Chemical Engineering and Materials Science.

Concentrations in Materials Science and Engineering

Students may elect to complete a more focused set of courses to enhance their ability to function at the interface with another scientific, engineering, or business discipline. Concentrations are available to, but not required of, any student enrolled in the Bachelor of Science degree in Materials Science and Engineering. Completing the Bachelor of Science degree in Materials Science and Engineering with a concentration may require more than 128 credits. The concentration will be noted on the student's transcript.

Biomedical Materials Engineering

To gain interdisciplinary skills in human biology and earn a Bachelor of Science degree in Materials Science and Engineering with a biomedical materials engineering concentration, students must complete requirement 3. a. above and the following (28 credits):

All of the following courses (16 credits):

· · ·		16 101101		
	ANTR	350	Human Gross Anatomy for Pre-Health Professionals	3
	CEM	351	Organic Chemistry I	3
	ME	495	Tissue Mechanics	3
	MSE	425	Biomaterials and Biocompatibility	3
	ZOL	341	Fundamental Genetics	4
2.	Two of	the foll	owing courses (3 credits):	
	ME	477	Manufacturing Processes	3
	MSE	474	Ceramics and Refractory Materials	3
	MSE	460	Electronic Structure and Bonding in Materials	
			and Devices	3
	MSE	465	Design and Application of Engineering Materials	3
	MSE	476	Physical Metallurgy of Ferrous and Aluminum Alloys	3
3.	At leas	t 6 crec	lits from a list of approved technical electives	6

Manufacturing Engineering

To gain interdisciplinary skills with business and design engineers for manufacturing projects and earn a Bachelor of Science degree in Materials Science and Engineering with a manufacturing engineering concentration, students must complete requirement 3. a. above and the following (21 credits):

- L.	. All of the following courses (12 credits).					
	ECE	415	Computer Aided Manufacturing	3		
	ME	477	Manufacturing Processes	3		
	ME	478	Product Development	3		
	MSE	465	Design and Application of Engineering Materials	3		
2.	Three	of the	following courses (9 credits):			
	GBL	323	Introduction to Business Law	3		
	MSE	426	Introduction to Composite Materials	3		
	MSE	474	Ceramic and Refractory Materials	3		
	MSE	476	Physical Metallurgy of Ferrous and Aluminum Alloys	3		

Completion of this concentration fulfills requirement 2. of the admission requirements for the Master of Science degree in Manufacturing and Engineering Management offered by The Eli Broad College of Business.

Metallurgical Engineering

To enhance the student's ability to characterize, process, and design with metals in association with mechanical engineers and earn a Bachelor of Science degree in Materials Science and Engineering with a metallurgical engineering concentration, students must complete requirement 3. a. above and the following (21 credits): All of the following courses (18 credits)

	All OI I			
	ME	423	Intermediate Mechanics of Deformable Solids	3
	ME	475	Computer Aided Design of Structures.	3
	ME	477	Manufacturing Processes	3
	MSE	481	Spectroscopic and Diffraction Analysis of Materials	3
	MSE	465	Design and Application of Engineering Materials	3
	MSE	476	Physical Metallurgy of Ferrous and Aluminum Alloys	3
2.	One o	f the fo	llowing courses (3 credits):	
	ME	425	Experimental Mechanics	3
	MSE	426	Introduction to Composite Materials	3

Polymeric Engineering

To gain interdisciplinary skills to facilitate interactions with chemical engineers and earn a Bachelor of Science degree in Materials Science and Engineering with a polymeric engineering concentration, students must complete requirement 3. a. above and the following (21 credits):

~	0.0			
	All of t	he follo	owing courses (18 credits):	
	CEM	351	Organic Chemistry I	3
			Fluid Flow and Heat Transfer	3
	CHE	472	Composite Materials Processing.	3

Complete at least 3 credits in courses selected from a list of approved technical electives available from the Department of Chemical Engineering and Materials Science.

MINOR IN MATERIALS SCIENCE AND ENGINEERING

The Minor in Materials Science and Engineering, which is administered by the Department of Chemical Engineering and Materials Science, provides students with a basic foundation in materials science that is applicable to many disciplines. The minor also offers opportunities for students to work in industry, research, or government, as well as to prepare for graduate study in materials science.

The minor is available as an elective to students in a bachelor's degree program in the College of Engineering, other than the Bachelor of Science Degree in Materials Science and Engineering. With the approval of the college, the courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor's degree.

Students who plan to complete the requirements for the minor must apply to the Department of Chemical Engineering and Materials Science. To be accepted into the minor, the student must be admitted into the College of Engineering. Enrollment for some MSE courses may be limited. Application forms are available at www.chems.msu.edu.

LINKED BACHELOR'S-MASTER'S DEGREE IN CHEMICAL ENGINEERING

Bachelor of Science Degree in Chemical Engineering Master of Science Degree in Chemical Engineering

The department welcomes applications from Michigan State University Chemical Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Chemical Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Chemical Engineering at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or another postsecondary accredited institution of comparable academic quality. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

Bachelor of Science Degree in Materials Science and Engineering Master of Science Degree in Materials Science and Engineering

The department welcomes applications from Michigan State University Materials Science and Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Materials Science and Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Materials Science and Engineering at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for gualifying 400-level and above course work taken at the undergraduate level at Michigan State University or another postsecondary accredited institution of comparable academic quality. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The Department of Chemical Engineering and Materials Science offers Master of Science and Doctor of Philosophy degree programs in chemical engineering and in materials science and engineering. A wide range of course offerings and research activities allows an individual program to be designed to fit the background, capabilities, and aims of the student. Studies in the department may be supplemented with courses offered by other departments in the College of Engineering and in other colleges.

The graduate programs in chemical engineering and materials science and engineering are designed to develop research expertise needed for the graduate to serve as a principal investigator in industrial or academic research. Course work is designed to expand the student's knowledge of engineering principles and applications. Each student conducts an extensive research project that significantly advances fundamental understanding of a chemical engineering or materials science system. Results of the research are documented in a thesis, dissertation, and research paper(s) for publication in a peer-reviewed journal.

CHEMICAL ENGINEERING

3

Emphasis in the graduate programs in chemical engineering is placed upon a fundamental approach to chemical engineering principles and the applications of chemistry and advanced mathematics. Selected topics in chemical engineering are developed from a fundamental viewpoint, with opportunity for study and research in such areas as process design; thermodynamics; chemical reaction engineering; mass, heat, and momentum transfer; separations; polymers and composite materials; nanomaterials; and biochemical and biomedical engineering. The department has three primary thematic areas: energy and sustainability, nanotechnology and materials, and biotechnology and medicine.

Master of Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant for admission to the master's degree program in chemical engineering must hold a bachelor's degree in chemical engineering or a related field and must have a grade-point average that would indicate success in graduate study.

International applicants must submit their scores on the Graduate Record Examination General Test.

Students who are admitted to the program with a bachelor's degree in a field related to chemical engineering will be required to complete the following collateral courses, in addition to the courses that are required for the master's degree:

			CREDITS			
CHE	432	Process Systems Control	3			
CHE	433	Process Design and Optimization I	3			
CHE	804	Thermodynamics and Kinetics in				
		Chemical Engineering	3			
CHE	805	Transport and Separation Processes				
Equiva	alent ur	dergraduate-level chemical engineering courses may be	substituted			
for Ch	or Chemical Engineering 804 and 805.					

Requirements for the Master of Science Degree in Chemical Engineering

The students must complete a total of 30 credits for the degree under Plan A (with thesis) or Plan B (without thesis), and meet the requirements specified below. Students in Plan A must complete a minimum of 20 credits at the 800-level or above. Students in Plan B must complete a minimum of 18 credits at the 800-level or above. Courses at the 400-level are acceptable as long as the minimum credit requirement is met at the 800-level. Courses below the 400-level are not acceptable.

Requirements for Both Plan A and Plan B:

CREDITS 15

- Core Courses. All of the following courses: . . CHF 801 CHE 802
- CHE 821

Department of Chemical Engineering and Materials Science

2.	CHE Suppo Depar	831 orting C tment c	Advanced Transport Phenomena	
----	-----------------------	----------------------------	------------------------------	--

Additional Requirements for Plan A

Complete 6 credits of CHE 899 Master's Thesis Research

- Additional elective credits as approved by the student's academic advisor.
- Additional Requirements for Plan B Complete 6 to 9 credits in a coordinated technical minor as approved by 1.
- the student's academic advisor.
- 2. Pass a final examination, oral or written, given by the student's academic advisor.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant for admission to the Ph.D. degree program in chemical engineering must hold a bachelor's or master's degree in chemical engineering or a related field and must have a grade-point average that would indicate success in graduate study.

Applicants must submit their scores on the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Chemical Engineering

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified by their guidance committees.

The Doctor of Philosophy degree in Chemical Engineering, as detailed in the graduate handbook for chemical engineering, is comprised of course work, research and selection of an advisor, a qualifying examination, formation of a guidance committee and doctoral degree program, a comprehensive examination, and successful completion of a dissertation and final oral examination in defense of the dissertation.

MATERIALS SCIENCE AND ENGINEERING

Master of Science

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

The department welcomes applications from students who possess a bachelor's degree in a related engineering or science discipline.

Requirements for the Master of Science Degree in Materials Science and Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below. Students must complete a minimum of 18 credits at the 800-level or above.

Requirements for Both Plan A and Plan B:

The student must complete: 1. Core Courses. All of the following courses (12 credits):

	MSE MSE	851 855	Thermodynamics of Solids	3
	MSE	860	Advanced Theory of Solids	3
	MSE	870 Or	Electron Microscopy in Materials Science	3
	MSE	881	Advanced Spectroscopy and Diffraction Analysis of Materials.	3
Ad	ditiona	al Req	uirements for Plan A	
1.			following course: Research Methods	3
			redits of MSE 899 Master's Thesis Research. t the 400-level or above in mathematics or statistics as ap-	

3. proved by the student's academic advisor.

4. Additional elective credits as approved by the student's academic advisor.

Additional Requirements for Plan B

- One course at the 400-level or above in mathematics or statistics as ap-1.
- proved by the student's academic advisor. 2. Additional elective credits as approved by the student's academic advisor.
- Pass a final examination, oral or written, given by the student's academic advisor.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

6

An applicant for admission to the Ph.D. degree program in materials science and engineering must hold a bachelor's or master's degree in materials science and engineering or a related field and must have a grade-point average that would indicate success in graduate study. Applicants must submit their scores on the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Materials Science and Engineering

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified by their guidance committee.

The Doctor of Philosophy degree in Materials Science and Engineering, as detailed in the graduate handbook for materials science and engineering, is comprised of course work, research and selection of an advisor, a qualifying examination, formation of a guidance committee and doctoral degree program, a comprehensive examination, and successful completion of a dissertation and final oral examination in defense of the dissertation.

DEPARTMENT of **CIVIL and ENVIRONMENTAL** ENGINEERING

Venkatesh Kodur, Chairperson

UNDERGRADUATE PROGRAMS

The Department of Civil and Environmental Engineering offers Bachelor of Science degrees in Civil Engineering and Environmental Engineering. Each program is described below.

CIVIL ENGINEERING

The civil engineering major is designed to provide graduates with a broad understanding of the physical factors involved in the planning, design, and operation of public and private facilities. The bachelor's degree program in civil engineering is oriented to the application of engineering principles to several areas of specialization, including transportation, structures, geotechnical engineering, environmental engineering, water resources, and pavements and materials.

The Bachelor of Science Degree program in Civil Engineering is accredited by the Engineering Accreditation Commission of ABET, *www.abet.org.*

Requirements for the Bachelor of Science Degree in Civil Engineering

 The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Civil Engineering.

The University's Tier II writing requirement for the Civil Engineering major is met by completing Civil Engineering 321 and 341. Those courses are referenced in item 3. a. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading **Graduation Requirements for All Majors** in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

ENVIRONMENTAL ENGINEERING

The environmental engineering major is designed to provide graduates with the engineering and scientific principles to analyze, design, and manage environmental systems, including water supplies, wastewater treatment facilities, air pollution control systems, surface and groundwater resources, and landfills. The program offers a thorough background in engineering fundamentals, along with a broad understanding of mathematical, physical, chemical, and biological concepts as they relate to environmental engineering.

The Bachelor of Science Degree program in Environmental Engineering is accredited by the Engineering Accreditation Commission of ABET, *www.abet.org*.

Requirements for the Bachelor of Science Degree in Environmental Engineering

 The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Engineering. LINKED BACHELOR'S-MASTER'S DEGREE IN CIVIL ENGINEERING

Bachelor of Science Degree in Civil Engineering Master of Science Degree in Civil Engineering

The department welcomes applications from Michigan State University Civil Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Civil Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Civil Engineering at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

LINKED BACHELOR'S-MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING

Bachelor of Science Degree in Civil Engineering with a concentration in Environmental Engineering Master of Science Degree in Environmental Engineering

The department welcomes applications from Michigan State University Civil Engineering undergraduate students in their junior and senior year, who are pursuing an environmental engineering concentration within the Bachelor of Science degree in Civil Engineering. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Civil Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Environmental Engineering at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the

master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The Department of Civil and Environmental Engineering offers the graduate degree programs that are listed below:

Master of Science Civil Engineering Environmental Engineering Doctor of Philosophy Civil Engineering Environmental Engineering

The civil engineering degrees offer tracks in structural, materials, pavement, and geotechnical engineering, and hydrology and water resources. The environmental engineering degrees offer specializations in environmental chemistry and physical-chemical processes, environmental microbiology and biotechnology, environmental hydrology and water resources, and geoenvironmental engineering.

The Master of Science degrees provide opportunities for students who seek to enter professional practice as specialists or to continue study in a doctoral program. The Doctor of Philosophy degrees are research focused, designed to prepare students for careers in teaching, research or advanced specialized practice.

CIVIL ENGINEERING

Students in the master's and doctoral degree programs in civil engineering may pursue advanced study in the areas of structures, fluid mechanics and hydraulics, geotechnical engineering, pavements, and transportation.

Master of Science

The student plans a program of study with the help of his or her academic advisor and subject to the approval of the advisor.

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant for admission to the master's degree program in civil engineering should have a bachelor's degree in civil engineering or a related field and should have a grade–point average that would indicate success in graduate study. Examples of fields that are related to civil engineering are other engineering professional fields, physics, computer science, urban planning, and chemistry.

Depending on their undergraduate programs and their specialties within civil engineering, students who are admitted to the master's degree program with bachelor's degrees in fields related to civil engineering may be required to complete collateral courses.

All applicants are encouraged to submit their scores from the Graduate Record Examination General Test.

Requirements for the Master of Science Degree in Civil Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).

A student under Plan A must complete at least 4, but not more than 8, credits of Civil Engineering 899. Should the student complete more than 8 credits of Civil Engineering 899, no more than 8 credits may be counted toward the requirements for the degree.

A student under Plan B may choose to complete a research project or a design project as part of the 30 credits required for the degree. A student who elects either of these options must complete at least 1, but not more than 3, credits of Civil Engineering 892 or at least 3, but not more than 5, credits of Civil Engineering 893.

Doctor of Philosophy

Admission

All applicants are encouraged to submit their scores from the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Civil Engineering

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified by their guidance committees.

ENVIRONMENTAL ENGINEERING

Students in the master's and doctoral degree programs in environmental engineering may pursue advanced study in the areas of biological and chemical treatment of hazardous substances in soils, leachates, industrial wastes, and groundwater; the fate and movement of chemical contaminants in surface water, groundwater, and soils; and environmental chemistry.

Master of Science

The student plans a program of study with the help of his or her academic advisor and subject to the approval of the advisor.

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants for admission are expected to have a level of competency equivalent to that achieved by earning an undergraduate degree in environmental engineering, or in civil engineering with an environmental engineering specialization. The undergraduate program should have included courses in mathematics through differential equations, chemistry, physics (mechanics), fluid mechanics, computer programming, and the design of water and wastewater treatment processes.

Depending on their undergraduate programs and their specialties within environmental engineering, students who are admitted to the master's degree program with bachelor's degrees in fields related to environmental engineering may be required to complete collateral courses.

All applicants are encouraged to provide their scores from the Graduate Record Examination General Test.

Requirements for the Master of Science Degree in Environmental Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).

A student under Plan A must complete at least 4, but not more than 8, credits of Environmental Engineering 899. Should the student complete more than 8 credits of Environmental Engineering 899, no more than 8 credits may be counted toward the requirements for the degree.

A student under Plan B may choose to complete a research project or a design project as part of the 30 credits required for the degree. A student who elects either of these options must complete at least 1, but not more than 3, credits of Environmental Engineering 892 or at least 3, but not more than 5, credits of Environmental Engineering 893.

Doctor of Philosophy

Admission

All applicants are encouraged to submit their scores from the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Environmental Engineering

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified by their guidance committees.

DEPARTMENT of COMPUTATIONAL MATHEMATICS, SCIENCE and ENGINEERING

Andrew J. Christlieb, Chairperson

Computational Mathematics, Science and Engineering is the multidisciplinary field that is concerned with the use of advanced computing capabilities to solve complex problems pertaining to computational modeling and data science. Among the areas of interest include the development and analysis of algorithms, high performance computing, including both parallel computing and heterogeneous architectures, and the application of both algorithms and high performance computing to modeling and data analysis, exploration, and visualization. The department offers a wide range of courses in computational and data science. Graduates will use their skills in large-scale computing and data science to address a wide variety of problems in science, engineering and other fields. The Department of Computational Mathematics, Science and Engineering is administered jointly by the colleges of Natural Science, and Engineering. The College of Natural Science is the primary administrative unit.

DEPARTMENT of COMPUTER SCIENCE and ENGINEERING

Matt W. Mutka, Chairperson

Computer science encompasses the broad areas of information processing and problem solving using digital computers. Students learn to analyze, design, and build integrated software and hardware digital systems that process, transmit, and reason about information in order to solve problems. Computer science graduates are employed in essentially all areas of industry, government, and education. They serve as system analysts involved with problems in business and research, designers and planners of process and production control software systems, computer component and system designers, programmers, and teachers.

UNDERGRADUATE PROGRAM

The Bachelor of Science program provides both a theoretical foundation in computer science, required for continued success in this rapidly changing field, as well as practical experience with current tools and techniques. To achieve these goals, students take courses that span a spectrum of knowledge ranging from theoretical foundations, which enable rigorous analysis of computational problems and solutions, to applied design and engineering methods. At the upper level, students choose from a wide range of elective courses focusing on computer networks, computer architecture, artificial intelligence, database systems, computer security, software engineering, and computer graphics. The senior year culminates with a team-oriented design course building on much of what one has learned throughout the undergraduate experience. Complementing these major areas, the cognate provides an excellent opportunity to develop an individually selected area of interest.

Students majoring in computer science with interests in other areas have the opportunity to consult and work with interested faculty from a wide range of academic disciplines.

Students who are enrolled in the Bachelor of Science degree program with a major in computer science may elect a Specialization in Game Design and Development. For additional information, refer to the *Specialization in Game Design and Development* statement in the *Department of Telecommunication, Information Studies and Media* section of this catalog.

The Bachelor of Science degree program in Computer Science is accredited by the Computing Accreditation Commission of ABET, *www.abet.org.*

Requirements for the Bachelor of Science Degree in Computer Science

- The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Computer Science.
 - The University's Tier II writing requirement for the Computer Science major is met by completing Computer Science and Engineering 498, referenced in item 3. b. below. Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading **Graduation Requirements for All Majors** in the College statement.
- The requirements of the College of Engineering for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.
- 3. The following requirements for the major:

	(1) One of the following courses: BS 161 Cell and Molecular Biology
	ENT 205 Pests, Society and Environment
	MMG 201 Fundamentals of Microbiology
	PLB 105 Plant Biology 3
	PSL 250 Introductory Physiology4
	ZOL 141 Introductory Human Genetics
	(2) One of the following courses: BS 171 Cell and Molecular Biology Laboratory 2
	CEM 161 Chemistry Laboratory I
	CEM 162 Chemistry Laboratory II
	PHY 191 Physics Laboratory for Scientists, I1
	PHY 192 Physics Laboratory for Scientists, II1
b.	PLB 106 Plant Biology Laboratory
D.	CSE 100 Computer Science as a Profession1
	CSE 231 Introduction to Programming I4
	CSE 232 Introduction to Programming II
	CSE 260 Discrete Structures in Computer Science 4
	CSE 320 Computer Organization and Architecture 3
	CSE 331 Algorithms and Data Structures
	CSE 335 Object-Oriented Software Design
	CSE 498 Collaborative Design (W)
	STT 351 Probability and Statistics for Engineering
c.	An additional five courses selected from the following:
	CSE 420 Computer Architecture
	CSE 422 Computer Networks
	CSE 425 Introduction to Computer Security
	CSE 435 Software Engineering
	CSE 450 Translation of Programming Languages
	CSE 460 Computability and Formal Language Theory 3
	CSE 471 Media Processing and Multimedia Computing 3
	CSE 472 Computer Graphics
	CSE 473 Fundamentals of 3D Game Development3 CSE 476 Mobile Application Development3
	CSE 477 Web Application Architecture and Development3
	CSE 480 Database Systems
	CSE 484 Information Retrieval
	CSE 491 Selected Topics in Computer Science 1 to 4
d	MTH 451 Numerical Analysis I
d.	Required Cognate:
	puter Science: business, communication arts and sciences, for-
	eign language, mathematics, the natural sciences, philosophy,
	psychology, the social sciences, and telecommunication. Stu-
	dents may complete cognates in other areas with the approval of
	the Department of Computer Science and Engineering academic
	advisor. The cognate should enhance the student's ability to apply
	analytical procedures in a specific subject area.
	The cognate requires a minimum of four courses totaling 15 or

33

15

15

The cognate requires a minimum of four courses totaling 15 or more credits outside the College of Engineering selected from (1) or (2) below. The academic advisor of the Department of Computer Science and Engineering must pre approve both the cognate and the cognate courses.

(1) At least 6 of the 15 credits must be in courses at the 300-400 level. The cognate in The Eli Broad College of Business requires a specific set of courses: ACC 230, EC 210, FI 320, GBL 323, and MKT 327.

(2) A sequence of at least four courses in a foreign language.

MINOR IN COMPUTER SCIENCE

The Minor in Computer Science and Engineering is administered by the Department of Computer Science and Engineering. This minor will provide students with a basic foundation in computer science that is applicable to many disciplines. This will also provide opportunities for students in industry or government, as well as prepare students for graduate-level study in computer science.

The minor is available as an elective to students who are enrolled in bachelor's degree programs at Michigan State University other than the Bachelor of Science Degree in Computer Science or the Bachelor of Science Degree in Computer Engineering . With the approval of the department and college that administers the student's degree program, the courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor's degree.

Students who plan to complete the requirements for the minor must apply to the Department of Computer Science and Engineering. The minimum criteria for acceptance is the completion of Computer Science and Engineering 231 and 260 with a combined grade-point average in those two courses of 3.0. Enrollment may be limited. Application forms are available at www.cse.msu.edu.

Requirements for the Minor in Computer Science

Complete a minimum of 18 credits in the Department of Computer Science and Engineering from the following:

gineering from the following.				
1.	All of t			
	CSE	231	Introduction to Programming I	4
	CSE	232	Introduction to Programming II	4
	CSE	260	Discrete Structures in Computer Science	4
2.	Two o	f the fo	llowing courses (6 or 7 credits):	
	CSE	320	Computer Organization and Architecture	3
	CSE	331	Algorithms and Data Structures	3
	CSE	335	Object-Oriented Software Design	4
	CSE	410	Operating Systems	3
	CSE	420	Computer Architecture	3
	CSE	422	Computer Networks	3
	CSE	425	Introduction to Computer Security	3
	CSE	435	Software Engineering	3
	CSE	440	Introduction to Artificial Intelligence.	3
	CSE	450	Translation of Programming Languages	3
	CSE	460	Computability and Format Language Theory	3
	CSE	471	Media Processing and Multimedia Computing	3
	CSE	472	Computer Graphics	3
	CSE	473	Fundamentals of 3D Game Development.	3
	CSE	476	Mobile Application Development.	3 3
	CSE CSE	477	Web Application Architecture and Development.	3
		480	Database Systems	3
	CSE	484	Information Retrieval	3

TEACHER CERTIFICATION OPTION

A computer science disciplinary minor is available for teacher certification.

Students who elect the computer science disciplinary minor must contact the Department of Computer Science and Engineering.

For additional information, refer to the statement on *TEACHER CERTIFICATION* in the *Department of Teacher Education* section of this catalog.

LINKED BACHELOR'S-MASTER'S DEGREE IN COMPUTER SCIENCE

Bachelor of Science Degree in Computer Engineering Master of Science Degree in Computer Science

The department welcomes applications from Michigan State University Computer Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Computer Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Computer Science at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

LINKED BACHELOR'S-MASTER'S DEGREE IN COMPUTER SCIENCE

Bachelor of Science Degree in Computer Science Master of Science Degree in Computer Science

The department welcomes applications from Michigan State University Computer Science undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Computer Science undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Computer Science at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The Department of Computer Science and Engineering offers programs leading to the Master of Science and Doctor of Philosophy degrees. Advanced study is available in a variety of computer science research areas such as algorithms, computer security, databases, data mining, machine learning, natural language processing, networking, pattern recognition and image processing, and software engineering, as well as many interdisciplinary research areas such as bioinformatics, cognitive science, and digital evolution.

Students who are enrolled in master's or doctoral degree programs in the Department of Computer Science and Engineering may elect an Interdepartmental Specialization in Cognitive Science. For additional information, refer to the statement on *Interdepartmental Graduate Specializations in Cognitive Science* in the *College of Social Science* section of this catalog. For additional information, contact the Department of Computer Science and Engineering.

Master of Science

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants for admission should possess a bachelor's degree in computer science or a related field such as mathematics, physics, or electrical engineering. All applicants must submit their scores from the Graduate Record Examination (GRE) General Test. Additional information is available on the Department's Web site at *http://cse.msu.edu*.

Requirements for the Master of Science Degree in Computer Science

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below:

Requirements for Both Plan A and Plan B:

The student must complete:

- 1. The breadth requirement as described in the Graduate Handbook which is available on the Department's Web site at *http://www.cse.msu.edu.*
- 2. At least 18 credits in courses eligible to satisfy the breadth requirement as approved by the student's academic advisor.

Additional Requirements for Plan A:

The student must complete:

- 1. A minimum of 21 credits in 800-900 level courses excluding Computer Science and Engineering 801, 890, and 899.
- 2. At least 6, but not more than 8, credits of CSE 899 Master's Thesis Research.

Additional Requirements for Plan B:

1. Complete a minimum of 24 credits in 800-900 level courses excluding Computer Science 801, 890, and 899.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants should be in the top 25 percent of their master's degree classes and should have a grade–point average of at least 3.50 on a scale of 4.0.

Applicants must submit their scores on the Graduate Record Examination General Test.

Applicants who have a Bachelor of Science degree and who demonstrate exceptional potential for graduate study may be accepted for admission to the doctoral program.

Additional information is available on the Department's Web site at *http://cse.msu.edu*.

Requirements for the Doctor of Philosophy Degree in Computer Science

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified by the department in the Graduate Handbook available at *http://cse.msu.edu* as well requirements specificed by their guidance committees. All courses that are used to satisfy the requirements for the degree must have been completed under the numerical grading system.

DEPARTMENT of ELECTRICAL and COMPUTER ENGINEERING

John Papapolymerou, Chairperson

The Department of Electrical and Computer Engineering offers two undergraduate programs and a concentration leading to a Bachelor of Science degree. The computer engineering program provides students the opportunity to customize their program through core electives in computer architecture, computer networks, and VLSI design and focus electives in hardware or software tracks. The program in electrical engineering allows students to choose their major electives from seven areas: electromagnetics, power, integrated circuits/VLSI, solid-state electronics/electroptics, communications/signal processing, control/robotics, and biomedical engineering. In addition, a student in either program can choose a biomedical engineering concentration that is noted on the student's transcript.

UNDERGRADUATE PROGRAMS

COMPUTER ENGINEERING

Computer engineering is concerned with the organization and design of computers and computer systems. The study of computer hardware and software, and their integration and application, is emphasized. The undergraduate program in computer engineering integrates studies in mathematics, basic sciences, engineering sciences, and engineering design. The program is structured to establish analytical and design skills in areas such as computer architecture, digital logic design, analog and mixed-signal circuits, computer communication networks, digital computer control, integrated circuit engineering, software engineering, operating systems, data structures and algorithms, computer–aided engineering, and electronic design automation. Complementing these fundamentals, the program also provides opportunities for specialization in individually selected areas of interest.

The Bachelor of Science Degree program in Computer Engineering is accredited by the Engineering Accreditation Commission of ABET, *www.abet.org.*

Requirements for the Bachelor of Science Degree in Computer Engineering

 The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Computer Engineering.

The University's Tier II writing requirement for the Computer Engineering major is met by completing Electrical and Computer Engineering 480. That course is referenced in item 3. b. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading **Graduation Requirements for All Majors** in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Engineering for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

CREDITS

3. The following requirements for the major:

a. One of the following courses:	1
CEM 161 Chemistry Laboratory I	1

Biomedical Engineering Concentration

The department offers a concentration for students who plan to pursue graduate work in biomedical areas or seek employment in selected medical-related areas. The concentration is available to, but not required of, any student enrolled in the Bachelor of Science degree program in Computer Engineering. Courses completed to satisfy requirement 3. above may also be used to satisfy the requirements of the concentration. The concentration will be noted on the student's transcript.

Biomedical Engineering

To earn a Bachelor of Science degree in Computer Engineering with a biomedical engineering concentration, students must complete requirements 1., 2., and 3. above and the following: CREDITS

		۰r
1.	Complete 6 credits from the following courses:	
	ANTR 350 Human Gross Anatomy for Pre-Health Professionals3	
	BS 161 Cell and Molecular Biology	
	PSL 250 Introductory Physiology	
	PSL 310 Physiology for Pre-Health Professionals	
2.	Complete 6 credits from the following courses:	
	ECE 445 Biomedical Instrumentation	
	ECE 446 Biomedical Signal Processing	
	ECE 447 Introduction to Biomedical Imaging	
	ECE 448 Modeling and Analysis of Bioelectrical Systems 3	
3.	Complete 3 credits from the following courses:	
	BE 445 Biosensors for Medical Diagnostics	
	ME 494 Biofluid Mechanics and Heat Transfer	
	ME 495 Tissue Mechanics	
	MSE 425 Biomaterials and Biocompatability	
	A 400-level listed above or other approved Electrical and Computer En-	
	gineering (ECE) courses with biomedical engineering content as ap-	
	proved by the student's advisor. The course used to fulfill this	
	requirement may not be used to fulfill concentration requirement 1. or 2.	

ELECTRICAL AND COMPUTER ENGINEERING

The Bachelor of Science degree in Electrical and Computer Engineering is offered only at the MSU Dubai instructional site. The program is designed to provide students with an opportunity to study electrical engineering and computer engineering including exploration of both hardware and software.

Requirements for the Bachelor of Science Degree in Electrical and Computer Engineering

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Electrical and Computer Engineering.

ELECTRICAL ENGINEERING

student's academic advisor.

The program provides both required and elective studies in communications, computers, control systems, electromagnetics, electronics, materials processing, power, signals, solid state, and biomedical engineering. It places emphasis on the fundamentals of science and mathematics and their application to the solution of contemporary problems that are within the purview of professional electrical engineers. The program is designed to establish a sound scientific basis for continuous growth in professional competence.

The Bachelor of Science Degree program in Electrical Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Requirements for the Bachelor of Science Degree in Electrical Engineering

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Electrical Engineering.

Biomedical Engineering Concentration

The department offers a concentration for students who plan to pursue graduate work in biomedical areas or seek employment in selected medical-related areas. The concentration is available to, but not required of, any student enrolled in the Bachelor of Science degree program in Electrical Engineering. Courses completed to satisfy requirement 3. above may also be used to satisfy the requirements of the concentration. The concentration will be noted on the student's transcript.

Biomedical Engineering

To earn a Bachelor of Science degree in Electrical Engineering with a biomedical engineering concentration, students must complete requirements 1., 2., and 3. above and the following: , CREDITS

	CR	
1.	Complete 6 credits from the following courses:	
	ANTR 350 Human Gross Anatomy for Pre-Health Professionals3	
	BS 161 Cell and Molecular Biology	
	PSL 250 Introductory Physiology	
	PSL 310 Physiology for Pre-Health Professionals	
2.	Complete 6 credits from the following courses:	
	ECE 445 Biomedical Instrumentation	
	ECE 446 Biomedical Signal Processing	
	ECE 447 Introduction to Biomedical Imaging	
	ECE 448 Modeling and Analysis of Bioelectrical Systems 3	
3.	Complete 3 credits from the following courses:	
	BE 445 Biosensors for Medical Diagnostics	
	ME 494 Biofluid Mechanics and Heat Transfer	
	ME 495 Tissue Mechanics	
	MSE 425 Biomaterials and Biocompatability	
	A 400-level listed above or other approved Electrical and Computer	
	Engineering (ECE) courses with biomedical engineering content as	
	approved by the student's advisor. The course used to fulfill this require-	
	ment may not be used to fulfill concentration requirement 1. or 2.	

LINKED BACHELOR'S-MASTER'S DEGREE IN COMPUTER SCIENCE

Bachelor of Science Degree in Computer Engineering Master of Science Degree in Computer Science

The department welcomes applications from Michigan State University Computer Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Computer Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Computer Science at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for gualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The Department of Electrical and Computer Engineering offers programs leading to the Master of Science and Doctor of Philosophy degrees. Graduate study in the department is organized into three groups: computer engineering including computer architecture, computer networks, and VLSI/microelectronics; electrosciences including electromagnetics and electronic materials and devices; and systems including control and robotics, biomedical engineering, power, and signal processing and communications. An interdisciplinary approach marks many of the research projects that faculty share with graduate students.

Master of Science

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants for admission should possess a Bachelor of Science degree in electrical engineering or a related field such as physics, mathematics, or computer science, and should have a grade–point average that would indicate success in graduate study.

Students who are admitted without a Bachelor of Science degree in electrical engineering may be required to complete collateral courses.

International applicants are required to submit Graduate Record Examination General Test scores.

Requirements for the Master of Science Degree in Electrical Engineering

The student must complete a total of 30 credits under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below: CREDITS

Requirements for Both Plan A and Plan B:

- Core Courses. Complete a minimum of four Electrical and Computer Engineering courses at the 800 or 900-level totaling at least 12 credits. Two of the courses must be selected from the following:
 - Advanced VLSI Design ECE 813 3 FCF 820 3 3 ECE 821 Linear Control Systems. . ECE 826 3 Advanced Electromagnetic Fields and Waves I ... FCF 835 3 3 ECE 863 Analysis of Stochastic Systems 874 FCF Physical Electronics 3 Electrical and Computer Engineering 801 cannot be used to fulfill this requirement
- Supporting Courses: At least 6 credits in approved courses in areas such as mathematics, statistics, or physics.
- 3. Seminar Requirement. First-year graduate students are reuqired to attend seven seminars from the graduate seminar series.

Doctor of Philosophy

Admission

International applicants are required to submit Graduate Record Examination General Test scores.

Requirements for the Doctor of Philosophy Degree in Electrical Engineering

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified by their guidance committees.

- 1. The doctoral program must include a minimum of 36 credits, in addition to 24 credits of Electrical and Computer Engineering 999.
- 2. No 800-900 level independent study credits taken beyond the bachelor's degree may be counted towards the doctoral degree.
- 3. A minimum of 3 credits must be taken outside of the College of Engineering in disciplinary areas such as mathematics, statistics, or physics.
- 4. All courses that are used to satisfy the requirements for the degree must have been completed under the numerical grading system.
- 5. Students may request up to 3 credits of master's thesis research be applied towards this requirement.
- 6. First year graduate students are required to attend seven seminars from the graduate seminar series.

DEPARTMENT of MECHANICAL ENGINEERING

James Klausner, Chairperson

UNDERGRADUATE PROGRAMS

Mechanical engineering is a diverse profession that relies on fundamental science principles to conceive, design, and manufacture everything from miniaturized individual parts (e.g. biosensors, printer nozzles, micro-reactors) to large complex systems and devices (e.g., rocket propulsion, jet engines, robotic tools, wind turbines, and automobiles). Mechanical engineers concentrate/focus on devices and systems that alter, transfer, transform, and utilize energy forms that cause motion. The mechanical engineering practitioner requires a broad range of skills and knowledge. The Department of Mechanical Engineering provides a curriculum that intertwines a foundation in mathematics and engineering science with creativity and innovation in design. Students learn the skills to develop ideas from concept to product. The program integrates individual mastery of these subjects with teamwork-based solutions to open-ended design problems and practical engineering experiences. Along with the required courses, optional concentrations are available for students to focus their program of study within a particular area of interest, as well as opportunities to study abroad.

MECHANICAL ENGINEERING

Mechanical engineers apply the fundamental principles of motion (mechanics) and energy (thermosciences) to serve the needs of people through the creative problem-solving process known as engineering design. These principles are represented in the subjects of solid and fluid mechanics, thermodynamics, heat transfer, mechanical systems, and material science. Practicing mechanical engineers work in many application areas, which include such industries as automotive, chemical, energy, consumer product, aerospace, computer and electronic, and biomedical.

The undergraduate mechanical engineering program prepares its graduates for the mechanical engineering profession through a foundation of engineering fundamentals; the development of analytical, computational, and experimental capabilities to recognize, model, and solve engineering problems; and the application of the engineering design method. Communication and teaming skills are integrated throughout the program.

For students who desire an international experience as part of their education, the department sponsors various programs such as "Mechanical Engineering in Aachen, Germany." During the spring semester, a small group of juniors and seniors pursue their normal studies abroad at the Technical University of Aachen where they have outstanding opportunities to participate in advanced research, explore industrial activities, and experience European culture and lifestyle.

The Bachelor of Science Degree program in Mechanical Engineering is accredited by the Engineering Accreditation Commission of ABET, *www.abet.org*.

Requirements for the Bachelor of Science Degree in Mechanical Engineering

 The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Mechanical Engineering. The University's Tier II writing requirement for the Mechanical Engineering major is met by completing Mechanical Engineering 332, 412, and 481. Those courses are refStudents who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading **Graduation Requirements for All Majors** in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

 The requirements of the College of Engineering for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

Concentration in Automotive Powertrain

A concentration in Automotive Powertrain is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in automotive powertrain may require more than 128 credits. The concentration will be noted on the student's transcript.

Automotive Powertrain

To earn a Bachelor of Science degree in Mechanical Engineering with an automotive powertrain concentration, students must complete requirements 1., 2., 3.a., 3.b., and 3.d. above and the following:

			UKEDI13		
All of the following courses (9 credits):					
ME	422	Introduction to Combustion	3		
ME	444	Automotive Engines	3		
ME	445	Automotive Powertrain Design	3		
One of the following courses (3 credits):					

erenced in item 3. b. (1) below.

ME	433	Introduction to Computational Fluid Dynamics
ME	442	Turbomachinery

Concentration in Biomedical Engineering

A concentration in Biomedical Engineering is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in biomedical engineering may require more than 128 credits. The concentration will be noted on the student's transcript.

Biomedical Engineering

To earn a Bachelor of Science degree in Mechanical Engineering with a biomedical engineering concentration, students must complete requirements 1, 2, 3.a., 3.b., and 3.d. above and the following:

			OKEDITO
Both of	the foll	owing courses:	7
BS	161	Cell and Molecular Biology	
PSL	250	Introductory Physiology	
Nine cr	edits fro	om the following courses:	9
BE	445	Biosensors for Medical Diagnostics	
ECE	445	Biomedical Instrumentation	
ME	494	Biofluid Mechanics and Heat Transfer	
ME	495	Tissue Mechanics	
ME	497	Biomechanical Design in Product Development	
MSE	425	Biomaterials and Biocompatibility	

Concentration in Computational Design

A concentration in Computational Design is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in computational design may require more than 128 credits. The concentration will be noted on the student's transcript.

Computational Design

To earn a Bachelor of Science degree in Mechanical Engineering with a computational design concentration, students must complete requirements 1., 2., 3.a., 3.b., and 3.d. above and the following:

			CREDITS
ME	416	Computer Assisted Design of Thermal Systems	3
ME	433	Introduction to Computational Fluid Dynamics	3
ME	465	Computer Aided Optimal Design	3
ME	475	Computer Aided Design of Structures	3

Concentration in Energy

A concentration in Energy is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in energy may require more than 128 credits. The concentration will be noted on the student's transcript.

Energy

To earn a Bachelor of Science degree in Mechanical Engineering with an energy concentration, students must complete requirements 1., 2., 3.a., 3.b., and 3.d. above and the following:

			OKEDITO		
All of the following courses (9 credits):					
ME	416	Computer Assisted Design of Thermal Systems	3		
ME	417	Design of Alternative Energy Systems	3		
ME	422	Introduction to Combustion	3		
One of the following courses (3 credits):					
ME	440	Aerospace Engineering Fundamentals	3		
ME	442	Turbomachinery	3		
ME	444	Automotive Engines	3		

Concentration in Engineering Mechanics

A concentration in Engineering Mechanics is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in engineering mechanics may require more than 128 credits. The concentration will be noted on the student's transcript.

Engineering Mechanics

3 3

To earn a Bachelor of Science degree in Mechanical Engineering with a engineering mechanics concentration, students must complete requirements 1., 2., and 3.a., and 3.b. above and the following:

CREDITS

12

The fo	ollowina	courses:
ME	423	Intermediate Mechanics of Deformable Solids
ME	425	Experimental Mechanics
ME	464	Intermediate Dynamics
ME		Computer Aided Design of Structures

Concentration in Manufacturing Engineering

A concentration in Manufacturing Engineering is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in manufacturing engineering may require more than 128 credits. The concentration will be noted on the student's transcript.

Manufacturing Engineering

To earn a Bachelor of Science degree in Mechanical Engineering with a manufacturing engineering concentration, students must complete requirements 1., 2., 3.a., 3.b., and 3.d. above and the following:

			CREDITS
All of t	he follo	wing courses:	10
EC	210	Economics Principles Using Calculus.	3
ME	372	Machine Tool Laboratory	1
ME	477	Manufacturing Processes	3
ME	478	Product Development	3
		owing courses:

ECE	415	Computer Aided Manufacturing	3
MSE	426	Introduction to Composite Materials	3

Concentration in Global Engineering

A concentration in Global Engineering is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with a concentration in global engineering may require more than 128 credits. The concentration will be noted on the student's transcript.

Global Engineering

To earn a Bachelor of Science degree in Mechanical Engineering with a global engineering concentration, students must complete requirements 1., 2., 3.a., and 3.b. above and 12 credits of approved mechanical engineering courses from a MSU co-sponsored Study Abroad institution. At least 3 credits must include a team design project.

LINKED BACHELOR'S-MASTER'S DEGREE IN ENGINEERING MECHANICS

Bachelor of Science Degree in Mechanical Engineering with a concentration in Engineering Mechanics Master of Science Degree in Engineering Mechanics

The department welcomes applications from Michigan State University Mechanical Engineering undergraduate students in their junior and senior year, who are pursuing an engineering mechanics concentration within the Bachelor of Science degree in Mechanical Engineering. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Mechanical Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Engineering Mechanics at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

LINKED BACHELOR'S-MASTER'S DEGREE IN MECHANICAL ENGINEERING

Bachelor of Science Degree in Mechanical Engineering Master of Science Degree in Mechanical Engineering

The department welcomes applications from Michigan State University Mechanical Engineering undergraduate students in their junior and senior year. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Mechanical Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Mechanical Engineering at the time of admission. Admission to the Linked Bachelor's-Master's program allows the application of up to 9 credits toward the master's program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or an external accredited institution. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master's degree. Credits applied to the Linked Bachelor's-Master's program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The Department of Mechanical Engineering offers programs leading to Master of Science and Doctor of Philosophy degrees, both in mechanical engineering and engineering mechanics. An individualized plan of study can be designed from a wide range of courses and research experiences to suit the professional aspirations of graduate students. A plan of study typically includes courses within and external to the department. The Mechanical Engineering Department offers research experiences in four broad areas: Fluid Thermal Science and Engineering; Biomechanics; Dynamic Systems and Controls; and Solid Mechanics, Design, and Manufacturing. The research opportunities are diverse, and include working closely with an individual faculty member and/or as part of a team in a large interdisciplinary research center. Graduate students are expected to engage in research that leads to new knowledge creation and pushes the boundaries of science and engineering.

ENGINEERING MECHANICS

Master of Science

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

The department welcomes applications from students who possess a bachelor's degree in a related engineering or science discipline.

Students who are admitted to the master's program with a degree in a discipline other than engineering mechanics and who have not completed Mechanical Engineering 221, 222, 361, and 423 or equivalent courses may be admitted with provisional status. Such students will be required to demonstrate proficiency in the material in the courses referenced above, either by completing each of those courses with a grade of at least 3.0 or by passing an examination on the material in those courses sanctioned by the department Graduate Studies Committee. Of the courses referenced above, only Mechanical Engineering 423 may be counted toward the requirements for the master's degree.

Requirements for the Master of Science Degree in Engineering Mechanics

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and must meet the requirements specified below:

Requirements for Both Plan A and Plan B:

- 1. The following core courses in engineering mechanics: Mechanical Engineering 825 or 861, 820, and 821.
- 2. At least **one** of the following core courses in mechanical engineering: Materials Science and Engineering 851, 855, 862, or 865.
- 3. At least one credit of Materials Science and Engineering 885.
- At least one course in mathematics or statistics at the 400–level or above approved by the student's academic advisor.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant for admission must identify at least one prospective faculty advisor that he or she would like to direct his or her program of study. Admission to the Ph.D program is contingent on a faculty advisor accepting the student as an advisee.

Requirements for the Doctor of Philosophy Degree in Engineering Mechanics

The student must complete:

- 1. At least **one** of the following core courses in materials science and engineering: Materials Science and Engineering 851, 855, 862, or 865.
- 2. At least one course in mathematics or statistics at the 400–level or above.

These requirements are waived for those students who completed equivalent courses prior to enrolling in the doctoral program.

MECHANICAL ENGINEERING

Master of Science

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant should possess a bachelor's degree in mechanical engineering or a related field.

The applicant must submit scores from the Graduate Record Examination General Test.

Requirements for the Master of Science Degree in Mechanical Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below:

Requirements for Both Plan A and Plan B:

The student must:

- 1. Complete at least one course in three of the following four areas:
 - a. Dynamical Systems: Mechanical Engineering 852 and 860.

- b. Fluid Mechanics: Mechanical Engineering 830
- c. Solid and Structural Mechanics: Materials Science and Mechanics 810 and 815.
- d. Thermal Sciences: Mechanical Engineering 802, 812 and 814.
- Complete at least 6 additional credits in Mechanical Engineering courses at the 800-900 level, not including Mechanical Engineering 898 or 899.

Additional Requirements for Plan A:

The student must:

- 1. Complete at least 20 credits in courses at the 800–900 level including at least 6, but not more than 8, credits in Mechanical Engineering 899.
- 2. Submit a brief thesis proposal for approval by the student's academic advisor early in the student's program of study.

Additional Requirements for Plan B:

The student must complete at least 22 credits in courses at the 800–900 level.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Engineering, students must meet the requirements specified below.

Admission

The applicant must submit scores from the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Mechanical Engineering

In addition to meeting the requirements of the university and the College of Engineering, students must meet the requirements specified by their guidance committees.
