## Fiscal Year 2027 Budget Information 5- Year Capital Request Planning and Capital Outlay Request

Submitted by:

October 31, 2025

Jennifer L. Flood State Budget Director State Budget Office State of Michigan Lansing, Michigan 48909

Dear Ms. Flood,

In accordance with the State Budget Office instructions, an update of Michigan State University's Five-Year Capital Plan and the State Fiscal Year (SFY) 2027 Capital Outlay request, Appendix G, is posted at the following institutional website:

https://ispm.msu.edu/capital-space-planning/capital-outlay

The SFY2027 Capital Outlay request has also been submitted via SIGMA. The Five-Year Capital Planning document follows your instructions and the academic direction of the university.

Construction is underway on the renovation and expansion of MSU's Greenhouses and Dairy Facilities with \$53 million in state support through Public Act 166 of 2022. These critical projects not only enhance industry-relevant research and teaching but also support Michigan's farmers and consumers. The expanded dairy cattle herd moved into the new Dairy Facility in July 2025, and the project is expected to be completed in early 2026, with the Greenhouses following in Spring 2026.

While our Five-Year Capital Plan outlines a range of capital needs, **MSU's top priority** continues to be **the Engineering and Digital Innovation Center (EDIC) and is resubmitted** as our priority Capital Outlay request. EDIC will serve as a gateway to Michigan's digital future by integrating teaching, learning, and research across at least six colleges: Engineering, Natural Science, Arts and Letters, Business, Communication Arts and Sciences, and Social Science. This transformative building will create interdisciplinary opportunities that are not possible in current facilities, advancing innovation, and preparing Michigan State students as a future-ready workforce.

The EDIC will be a hub for advanced manufacturing, materials science, AI, microelectronics, and space electronics—leveraging the capabilities of the Facility for Rare Isotope Beams (FRIB) and other key university assets. Hosting more than 65 researchers and their teams, the center will attract top talent to the Lansing region, accelerate discovery, and directly support Michigan's "Make it in Michigan" economic development strategy.

Given the scale and statewide economic impact of this project, MSU continues the bold request for a significant funding partnership – totaling \$100 million of state

#### Office of the President

Hannah Administration Building 426 Auditorium Road, Room 450 East Lansing, MI 48824

> 517-355-6560 Fax: 517-355-4670 president.msu.edu

**investment.** University leadership has identified the EDIC as central to sustaining MSU's academic and research excellence, expanding innovation capacity, and strengthening the engineering and innovation talents in the State of Michigan. The center will enhance recruitment and retention, increase competitiveness for federal research funding, and deepen collaboration with industry to meet workforce needs.

MSU has now secured over \$85 million in philanthropic commitments toward a \$100 million goal, demonstrating broad support from partners who share our strategic vision. This, coupled with the university's commitment of \$140 million, and the requested \$100 million of state investment positions the EDIC as a transformational public-private partnership.

We are grateful for the initial \$30 million state appropriation through the Higher Education appropriation in SFY 2024 and respectfully request an additional \$70 million in state support—bringing the total state contribution to \$100 million—to fulfill the full potential of the EDIC and help build the workforce, innovation ecosystem, and economic future Michigan needs.

MSU's Five-Year Capital Plan is strategically aligned with areas of high enrollment demand, strong national reputation, and growing research —particularly in STEM fields such as biomedical and biological sciences, engineering, computation and data science, energy and water, and the arts—while advancing our land-grant commitment to access, opportunity, and excellence. Each project contributes directly to Michigan's goals of developing a skilled workforce and a resilient economy.

As we look to the future, MSU is well-positioned to accelerate our contributions and expand our impact as a premier research institution with the unwavering commitment to the people of the State of Michigan with access and engagement embedded in our land-grant mission.

Sincerely.

Kevin M. Guskiewicz, Ph.D.

# Fiscal Year 2027 Budget Information Michigan State University Five-year Capital Planning and Capital Outlay Request

#### **Preface**

Michigan State University's capital plan is guided by 1) MSU's strategic plan, MSU 2030: Excellence for Global Impact <sup>1</sup>, 2) Vision 2050: An Integrated Facilities and Land Use Plan<sup>2</sup> and 3) the Capital Planning Framework, which integrates academic, support, human resources, fiscal, and space and facility infrastructure planning. Vision 2050, adopted by the MSU Board of Trustees in December 2023, provides a framework for future development on the university's campuses and landholdings. While flexible in nature, Vision 2050 recommendations affirm MSU's goals of academic excellence; student success; access, opportunity and excellence; novel partnership opportunities; resilient and sustainable land use; and a mission that advances the state-wide economy. These goals embedded themselves throughout state-wide facilities and across each of the East Lansing campus precincts, resulting in distinct recommendations around the buildings, mobility networks, open spaces, and utility systems that will support the university's next generation of development.

The planning process includes near- to long-term strategy development to ensure the university has the space and facility resources necessary to carry out its mission. This is accomplished within the context of continuing to identify ways to best utilize our resources of people, dollars, and space. Strategy development takes into consideration internal and external challenges and opportunities, the capacity to be flexible and nimble, allowing for responsiveness to new opportunities, and the dynamic and evolving nature of higher education.

Michigan State University's refreshed strategic plan, MSU 2030: Excellence for Global Impact, was introduced in August 2025. The strategic plan was originally launched in 2021 and balanced the benefits of a stable framework with the need for adaptability by calling for a refresh process several years into the life of the plan. The 2025 updates reflect our achievements and the evolving context of MSU and the world with refined goals, objectives, and key initiatives that sharpen our vision and accelerate our pursuit of excellence.

MSU 2030: Excellence for Global Impact, the refreshed plan, centers the unique character of the Spartan community, known for its collaborative, innovative spirit and uncommon will to make a difference. The strategic plan identifies six strategic priorities, providing the scaffold for broad, outcome-oriented goals, related objectives, key actions/initiatives, and relevant indicators of success. The plan underscores MSU's strength as collaborative thinkers and doers, moving boldly as one team on enduring core ideas: Student Success: Provide an exceptional educational experience for all students that prepares them for postgraduate success, achieving high graduation rates with reduced opportunity gaps.

<sup>&</sup>lt;sup>1</sup> See <u>Strategic Plan | Michigan State University (msu.edu)</u>

<sup>&</sup>lt;sup>2</sup> See <u>Vision 2050</u> | <u>Michigan State University (msu.edu)</u>

- Staff and Faculty Success: Support career development and well-being of staff and faculty at MSU, focusing on creating a best-in-class workplace culture and welcoming environment in which excellence and opportunity thrive.
- Discovery and Innovation for Impact: Be a leader in developing transdisciplinary solutions to ecological and human problems affected by social, economic, political, climate and environmental changes.
- Sustainable Health: Enhance quality of life for people everywhere by comprehensively leveraging expertise and research activity to improve health and the systems that affect health.
- Stewardship for a Sustainable Future: Provide exemplary stewardship of institutional resources to foster the long-term sustainability of MSU's education, research, and outreach and engagement programs.
- Access, Opportunity and Excellence: Be a national leader in promoting access, opportunity and excellence, and address barriers to success for all on our campus and beyond.

#### I. Mission Statement

For 170 years, Michigan State University has been advancing knowledge and transforming lives through high-impact, innovative teaching, research, and outreach initiatives. Today, MSU is a major public research university with global reach and extraordinary impact, continuing its mission to help students become responsible, knowledgeable, and productive citizens.

We are an inclusive, academic community known for our traditionally strong academic disciplines and professional programs and our liberal arts foundation. Our cross- and interdisciplinary enterprises connect the sciences, humanities, and professions in practical, sustainable, and innovative ways to address society's rapidly changing needs.

As a public, research-intensive, land-grant university, funded in part by the State of Michigan, our mission is to advance knowledge and transform lives by:

- Providing outstanding undergraduate, graduate, and professional education to promising, qualified students in order to prepare them to contribute fully to society as globally engaged citizen leaders.
- Conducting research of the highest caliber that seeks to answer questions and create solutions in order to expand human understanding and make a positive difference, both locally and globally.
- Advancing outreach, engagement, and economic development activities that are innovative, research-driven, and lead to a better quality of life for individuals and communities, at home and around the world.<sup>3</sup>

\_

<sup>&</sup>lt;sup>3</sup> See MSU Mission Statement | Board of Trustees | Michigan State University

Since the mid-1960s, MSU has been recognized as a top academic institution and is a member of the prestigious Association of American Universities, consisting of a group of elite research universities in the United States and Canada. MSU is one of only 23 land-grant universities, and one of 38 public universities with membership in the Association of American Universities. MSU's success is further evidenced by its consistent inclusion among the top 30 public universities according to U.S. News & World Report. MSU has 31 programs featured in the top 25 nationally by U.S. News and World Report, including five ranked number one. Also in 2025, Washington Monthly ranked MSU 25<sup>th</sup> among public institutions in "Best Colleges for Research" and 16<sup>th</sup> out of 367 four-year colleges and universities in the Midwest for "Best Bang for the Buck".

#### Research

MSU continues to ensure that research programs grow, providing stimulus for economic development and workforce development while creating a culture of innovation and creativity that maintains the university's international competitiveness and reputation. MSU is a leader in creating knowledge for the 21st century, routinely receiving in excess of \$700 million in sponsored awards annually, focused in areas such as nuclear physics, food security, plant sciences; sustainable health sciences; material sciences, basic sciences such as chemistry, microbiology, and molecular genetics; computational sciences, and population and the environment, including food, water, and energy. According to National Science Foundation Higher Education Research and Development data, MSU's research expenditures for 2024-25 fiscal year were \$932 million. Contributing to MSU's ten-year long increase in research expenditures is the success of the university's Global Impact Initiative (GII). Through the Global Impact Initiative, launched in 2014, MSU has recruited some 100 new faculty investigators to the MSU research team to help accelerate finding solutions to the world's toughest problems. Phase two of the initiative, GII 2.0, was approved by the Board of Trustees in June 2024 and adds an additional 20 new faculty positions, in disciplines such as space electronics, computational biology and health services research. The long-term investments in faculty hiring from the Global Impact Initiative, along with sustained investment in research infrastructure, positions MSU to exceed its strategic plan goal of \$1 billion in annual research expenditures by 2030 and make progress toward finding solutions to the most pressing societal challenges.

#### **Education**

This fall, MSU enrolled 32,479 in-state resident undergraduate students. At the same time, MSU draws students from all over the state, country, and world. This year, MSU enrolled individuals from all 83 counties in Michigan, all 50 states in the country, and more than 139 countries. In an ongoing effort to uphold its commitment to access, MSU has established strong and substantial financial aid programs to assure student access to high-quality MSU programs. MSU routinely enrolls in excess of 8,000 Pell Grant recipients, representing at least 20% of the undergraduate population. As part of its commitment to reducing student loan burdens and promoting financial stability for graduates, MSU's 2025-26 fiscal year budget includes an incremental \$9 million in student financial aid. Additionally, in 2024-25, MSU launched Spartan Tuition Advantage. The program supports the university's commitment to making an MSU education within reach for all Michigan residents, by covering the full cost of tuition for all qualifying in-state students. Further enhancing accessibility, MSU launched the Native

American Tuition Advantage Program for Fall 2025, aiming to eliminate financial barriers and increase enrollment among historically underrepresented Native American students. The program offers in-state tuition rates to out-of-state Native American students.

Michigan State is committed to student success, and this remains a central focus of the MSU's strategic plan. At Michigan State, we believe every student we admit has the ability to succeed and graduate. As established in the strategic plan, student success is the measure of an institution's ability to provide a relevant curriculum and empathetic environment that supports all students' psychological, social, emotional, physical, cultural and financial well-being to enable all students to learn, thrive, graduate and succeed after graduation. Understood this way, student success is not a measure of the academic achievement of either individual students or students collectively; rather, measures like academic standing, persistence, graduation, sense of belonging, engagement, time-to-degree, and placement rate indicate how well an institution supports its students. MSU has been a leader in student success initiatives for more than a decade. As a member of the University Innovation Alliance, we have been part of a group of collaborative innovators determined to share knowledge and scale successes to ensure that students can graduate and contribute to America's economic competitiveness.

MSU provides learning experiences that blend the theoretical with the practical, combines curricular and co-curricular experiences, and instills an entrepreneurial mindset in its students. Student learning experiences include study abroad, hands-on research engagement, service learning, internships, co-ops, field placement, student teaching, and clinical placement during their degree program. All complement a variety of classroom experiences to provide rich learning opportunities. The entrepreneurial ethos fits our progressive pedagogy preparing students for real-world careers demanding both technical and disciplinary expertise along with connective interpersonal skills. Curricular and co-curricular experiences aim to help students develop deep knowledge within a specific content area as well as a broad set of skills across content areas focused on critical thinking, analytical reasoning, and communication.

Our collective efforts to enhance the student experience have resulted in MSU's graduation rate trending upward since 2002 to 81% in 2024. MSU has a goal of increasing that rate to 86% by 2030. MSU is coupling its efforts to improve graduation rates with a strong commitment to accessibility and student success. MSU's upward trend in graduation rate is particularly noteworthy when also considering its acceptance rate of 81% for 2025. In terms of employability, 92% of students who earn bachelor's degrees from MSU are immediately employed or pursue additional education; as undergraduate students, nearly 70% graduate from MSU having already completed an internship. MSU's efforts have been recognized nationally, earning 4.5 out of 5 stars from Money magazine based on the combination of quality, affordability, and student outcomes.

#### **Outreach**

As the nation's premier land-grant university, MSU has long been committed to serving communities across Michigan and around the world. From helping businesses expand into new markets, to supporting farmers through cutting-edge research, and bringing global talent to campus, MSU's international engagement not only advances knowledge but also strengthens Michigan's economy and future. This global focus has helped establish MSU as one of the world's leading research universities. The 2026 Times Higher Education World University

Rankings placed Michigan State 105 out of 2,191 global institutions, a jump of 17 from last year's rankings and the highest in four years. MSU is ranked 38<sup>th</sup> among the 171 U.S. institutions, and 10<sup>th</sup> among the 18 Big Ten institutions – an improvement of three places. Our global ranking helps MSU recruit top students and faculty from around the world, generate revenue and funding internationally, and position MSU as a leader on the world stage. MSU ranks in the top 10 for study abroad among public institutions, offering more than 300 education abroad programs on all seven continents. In addition to their invaluable cultural and academic contributions on campus, MSU's 4,400+ international students and scholars have a \$225.4 million contribution to the Greater Lansing economy, supporting more than 2,200 jobs. Approximately 1,600 faculty members are involved in international research, teaching, and service projects and programs, and MSU maintains partnerships with more than 325 international institutions in over 80 countries. MSU receives \$73 million in external funding for international work each year — about 8% of total external research funding annually. We continue to expand our reach around the globe through:

- The Broad College of Business's International Business Center (IBC) allows students to gain hands-on experience by helping Michigan companies expand into global markets. The IBC provides education, research and assistance on international business and trade and is partnered with numerous Fortune 500 Companies as well as local and state organizations. One example is the Michigan Export Growth program, which partners with the Michigan Economic Development Corporation. The export growth program hires students who consult with small- and medium-sized Michigan companies to evaluate demand potential for their products in international markets. The students gain experiential learning opportunities while helping Michigan companies expand and thrive.
- MSU's long-standing impact on agriculture is amplified through its global research partnerships. For example, a potato breeding and genetics project led by a world-renowned potato researcher at MSU since 1988 has released over 30 new potato varieties. The research work done on the project in other countries has led to improvements that directly benefit Michigan's potato chip industry. Similarly, many bean growers in Michigan have gained from the development of disease-resistant crops bred through international partnerships. These examples, and other collaborations around the world between MSU faculty and researchers enable the exchange of ideas that drive innovation and strengthen MSU's research excellence.
- Creating the Center for Global Learning and Innovation in 2024 a dynamic new hub
  that reinforces MSU's commitment to internationalization. The center brings together
  key programs and fosters collaboration across colleges and departments while
  enhancing opportunities for students, faculty, and staff to engage with global learning.
  With a focus on innovation, collaboration, and faculty development, the center provides
  structure and resources to support a holistic global learning strategy for success in a
  modern, globally connected society.
- The Alliance for African Partnership (AAP) is a collaborative and cross-disciplinary platform for addressing today's global challenges. AAP is developing new models of engagement for shared research while enhancing the resources and capacities of African universities, institutions, and scholars. Formally launched in May 2016, AAP

builds off MSU's longstanding work in Africa and serves as a model for Africa-led partnerships, cross-disciplinary research, and applying science and the humanities to development challenges. In 2023 the AAP celebrated its 5-year anniversary, renewing the partnership with a 5-year strategic plan.

- The Global Youth Advancement Network (GYAN) is a coordinating platform for research and engagement activities related to the education, entrepreneurship, mentorship, and leadership training of young people around the world. GYAN's three core objectives are convening youth around the world for thought leadership, capacitating youth-serving institutions, and content/knowledge development through action-oriented research. GYAN connects faculty at MSU with faculty in partner countries to engage in collaborative research and program development related to youth employment and entrepreneurship.
- The Asia Hub program is redefining our conception of institutional partnerships and collaboration models in Asia. The program offers an enhanced platform for expanded faculty and student engagement in Asia by engaging key partners, exploring new strategies to co-fund and leverage investments, and facilitating collaborations to advance integrated research and novel academic programming. Asia Hub partners and research teams create a synergistic network of networks within and across central Eurasia, East Asia, South Asia, Southeast Asia, and the world while building capacity among partners to address global challenges.
- MSU created the MSU Water Alliance to utilize its vast water research expertise to address global water issues. The alliance will bridge faculty members across multiple disciplines and internationally to address immense challenges, including PFAS and wastewater pollution, pathogen risks, the circular water economy, and water and food shortages caused by climate change and weather instability.

Michigan State University is committed to providing world-class opportunities for success and to making those opportunities available to a broad spectrum of talented students from across Michigan and around the world. The strategic plan charges us to meet our students where they are, provide high-quality experiences for all of our students, and ensure that every student has the opportunity and support to learn, thrive, and graduate.

#### II. Instructional Programming

As one of 71 members of the prestigious Association of American Universities in the U.S. and Canada, a Carnegie Research University (highest research activity) institution, and Michigan's land-grant university, Michigan State is dedicated to reflecting its tripartite mission in its instructional offerings. MSU is uniquely positioned as a top-tier research intensive institution, and land-grant university offering an accessible education, to have a big impact on solving the world's toughest problems.

MSU continues to have an outstanding record of students earning prestigious national and international scholarships. MSU has produced 20 Rhodes Scholars, 60 Goldwater Scholars, 20 Marshall Scholars, 17 Truman Scholars, 18 Churchill Scholars, 14 Udall Scholars, 8

Presidential Fellows, 7 Hollings Scholars, 7 Gates Cambridge Scholars, 6 Mitchell Scholars, 5 Beinecke Scholars, and 3 Gaither Fellows.

Michigan State University offers more than 400 academic programs, to meet the needs of Michigan citizens and students from across the country and around the world. MSU is ranked 29<sup>th</sup> among public universities and 64<sup>th</sup> overall in U.S. News and World Report's America's Best Colleges 2026. MSU has 33 undergraduate and graduate programs and concentrations ranked in the top 25 nationally by U.S. News & World Report, including five #1-ranked programs. MSU's undergraduate Supply Chain Management Program ranks #1 and the Broad College of Business is ranked 14<sup>th</sup> among public universities for undergraduate business programs according to the 2025 U.S. News & World Report. Elementary and Secondary education graduate programs have ranked 1<sup>st</sup> for 31 straight years. Two other MSU graduate programs: educational administration, and higher education administration also rank number one. In its 2025 ranking for online graduate programs, U.S. News & World Report ranked eight of Michigan State University's participating online graduate programs in the top 25, all of which are in the top 10.

To ensure MSU remains a best value for students and other stakeholders, the university monitors its standing against relevant regional, national, and international peers. Areas of importance include academic quality, efficiency and value, affordability and access, and economic impact. To remain competitive, MSU must be an effective steward of its resources. All colleges and administrative units undergo annual strategic planning reviews to encourage alignment with university strategic priorities and ensure university-wide effectiveness and efficiency. With resources focused on mission-centric areas of the institution, MSU continues to preserve its academic rigor with a competitive student-faculty ratio (17:1) that is consistent with the Big Ten public universities' average.

#### Recent programming initiatives

- MSU is partnering again with Apple to advance American manufacturing through the new Apple Manufacturing Academy, opened in Detroit's First National Building in summer 2025. The first program of its kind in the United States, the academy will provide free in-person and virtual training for small- and medium-sized manufacturers nationwide, focusing on artificial intelligence, smart manufacturing, and operational efficiency. MSU experts and Apple engineers will collaborate to train workers in vital skills like project management, manufacturing process optimization, and vocational and leadership skills. Building on the success of the Apple Developer Academy, this partnership reflects MSU's strong programming in engineering, packaging, logistics and supply chain, commitment to be a leader in AI research, and aligns with its mission of community outreach and desire to solve the world's biggest problems.
- The Department of Religious Studies in the College of Arts and Letters launched the new Nonprofit Leadership, Religion and Social Change undergraduate major for fall 2025. The major is designed to meet the growing demand for ethical, culturally competent leaders in the expanding nonprofit, philanthropic and service sectors and blends academic study, experiential learning, community engagement and applied

research to provide students with a strong foundation to turn their passion for helping others into real-world change.

- The Broad College of Business announced the launch of its new Professional Online MBA format in fall 2025. The new format is designed to deliver flexibility for working professionals while providing the same high-quality education that defines the Broad MBA.
- The first class of physician assistants graduated from MSU's College of Osteopathic Medicine's new Physician Assistant Medicine Program in August 2024. The PA medicine program was launched in 2022, with 94% of its students from Michigan. The College of Osteopathic Medicine was recently named #1 by U.S. News and World Report for having the most graduates practicing in professional shortage areas. Seventy-six percent of the PA program graduates accepted positions to work in the state of Michigan, and 71% decided to work in medically underserved communities. Employment for PA's is projected to increase by 27% over the next decade according to the U.S. Bureau of Labor Statistics.
- MSU's College of Law opened its Public Defender Clinic in the 2024 academic year the first of its kind in the state. The clinic works in partnership with local trial-level indigent defense systems throughout Michigan to help fill the growing need for pre-conviction appellate advocacy a highly specialized area of law. Beyond fulfilling the immediate need for exceptional client representation, the clinic trains new generations of public defenders while exposing students to career opportunities throughout Michigan. This innovative partnership engages students directly in cutting edge constitutional litigation, as well as the most important issues facing public defenders and indigent defense systems today. The clinic's unique collaborative effort with public defenders all around the state is already proving to be a great success, supplying clinic students with an unparalleled experiential education while helping provide a level of legal representation that might otherwise have been unavailable to indigent individuals facing criminal charges.
- The College of Engineering introduced a new Bachelor of Science program in Technology Engineering in 2024. The program seamlessly integrates engineering and computer science curricula, offering an innovative educational experience, that will prepare students for modern engineering challenges in the multidisciplinary, interconnected world. The program responds to both industry and student demands, providing additional opportunities for students in the Engineering Sciences. Additionally, the program responds to the state of Michigan Economic Development goal to provide a more qualified workforce, in particular related to technology and engineering sectors. This degree program fosters a pipeline of engineering talent to support the manufacturing industries that Michigan is actively working to attract.
- The Michigan State University and Lansing Community College (LCC) partnership that improves access to a four-year degree, increases student success, and helps build a pipeline of talent to meet the needs of the Mid-Michigan economy was renewed in 2024. The partnership, called Envision Green, provides a seamless transition from LCC to

MSU by embedding MSU advisors within LCC to guide students through their educational journey — a transition more than 5,500 LCC students have made over the last decade. With this partnership in place, prospective LCC students can consider MSU from the start of their higher education journey. The affordability of the LCC-to-MSU path means a four-year-degree is an option for more people in the region — crucial for building and retaining an educated workforce in Michigan.

#### **State and Community Presence**

For the second straight year, U.S. News and World Reports has ranked MSU as number 1 in service learning for public institutions and number 9 overall. Service-learning, known as community engaged learning at MSU, integrates community partnerships with classroom instruction to enrich the student learning experience, teach civic and social responsibility, and strengthen communities.

- Since launching in 2024, the Rx Kids public-private partnership jointly led by MSU's College of Human Medicine, has already expanded to 11 communities across the state helping over 3,600 families. In October 2025, the State of Michigan committed an additional \$270 million to Rx Kids, enabling expansion over the next three years to even more communities and families across the state. This investment is expected to reach nearly 100,000 babies — about one-third of all births in Michigan. Every participating family receives \$1,500 during pregnancy, followed by \$500 a month during at least the first six months of a child's life. The program has demonstrated significant positive outcomes. Studies show Rx Kids nearly eliminated evictions with a 91% decrease, reduced rent and mortgage debt by over \$1,000 on average and improved nutritional access. Rx Kids has achieved a nearly 100% enrollment rate among eligible newborns in the communities it has launched in. Surveys indicate that 88% of participants feel more financially secure, 66% report improved access to healthcare, and 84% have gained confidence in parenting. Preliminary administrative data findings also reveal improvements in prenatal care utilization, improved maternal and infant health, decreased child welfare involvement, and more. Economically, the program has generated an estimated \$1.57 return on investment for local economies for every \$1.00 prescribed, underscoring its dual role in enhancing public health and stimulating economic growth.
- The MSU College of Veterinary Medicine has partnered with the Michigan Department of Agriculture and Rural Development to launch a Community Medicine Program aimed at increasing veterinary services in underserved Michigan communities. Utilizing a mobile surgical unit, veterinary students will gain hands-on experience performing routine surgeries, enhancing their education while positively impacting local communities and patient outcomes.
- MSU has played a vital role in strengthening health care in Michigan's Upper Peninsula for more than five decades. In response to a physician shortage in the 1970s, MSU's College of Human Medicine established one of the nation's first rural medical training programs, originally based in Escanaba. Now headquartered in Marquette, the Rural Physician Program trains approximately 20 third- and fourth-year medical students

annually through clinical placements across U.P. hospitals and clinics. Research shows that graduates who train in the region are significantly more likely to remain and practice there, with nearly one-quarter of alumni serving Upper Peninsula communities after graduation.

- MSU's College of Osteopathic Medicine received a \$25 million grant from Michigan Department of Health and Human Services that will address the state's critical shortage of direct care workers, or DCWs, by establishing a Direct Care Career Center that aims to increase pathways into the field and transform the public view to one that recognizes the workforce as a respected profession.
- MSU's Child Development Lab (CDL) is expanding, bringing top-tier early childhood education programs to a state-of-the-art facility in Lansing. The State of Michigan appropriated \$2 million to support the project, planned to open its doors in early 2026. The College of Social Science's Department of Human Development and Family Studies currently operate two other Child Development Labs, in East Lansing and Haslett, and are committed to providing outstanding service to children and their families, critical training for students in child development, and exemplary research settings for faculty and students.

#### **Recent Programming and Facilities Updates**

As we maintain and enhance the academic quality of our program offerings, we must also be vigilant about the quality, flexibility, functional alignment, utilization and expansion needed for our academic and instructional space. MSU must provide state-of-the-art facilities and infrastructure that will help attract and retain top-quality students, faculty, and researchers. This is vital to remain competitive in key fields, both nationally and internationally, and to maintain our membership in the prestigious American Association of Universities. Through entrepreneurship and a systems approach, MSU research moves rapidly from classrooms and laboratories to create new products, new industries, and new jobs, providing the state with a talent pipeline, expertise and research outcomes, and industry partnerships for a future Michigan. Examples of facilities that enable MSU to be competitive for talent, external grants and awards, and partnerships include:

- In September of 2024 MSU's Board of Trustees authorized construction for a new Plant and Environmental Sciences Building. The 200,000 square foot facility will provide critical laboratory space for approximately 40 principal investigators and their teams. MSU is a leader in food security and climate adaptation research and is ranked among the world's leading universities in plant sciences. Ten of MSU's eleven members of the prestigious National Academy of Sciences work in plant and environmental science in plant and environmental science. The project is expected to be completed in early 2027.
- MSU broke ground on two facilities critical to agricultural research and food production in April 2024, a new Dairy Cattle Teaching and Research facility and renovations and additions to the Plant Science Greenhouse facilities. The State of Michigan provided \$53 million for partial funding of each project. The facilities are vital to supporting

Michigan's agricultural industry by developing the next generation of dairy industry and plant science leaders and creating cutting edge knowledge. The dairy cattle herd moved into the new facility in July 2025 and the remainder of the Dairy Cattle Teaching and Research Facility is expected to be completed in early 2026, bringing MSU in line with industry standards that allow researchers to utilize the latest technology and gain industry input to guide the focus of research efforts to address Michigan producer's most urgent needs. The Plant Science Greenhouse facilities are expected to be completed in spring 2026.

- MSU celebrated the grand opening of its Multicultural Center in February 2025. The new building, situated in the center of campus, is designed as a vibrant hub for connection, celebration and belonging, and offers a welcoming space for students of all backgrounds to gather, learn and grow together. It is a place where students can feel safe, build community, share ideas, gather around food and celebrate all the cultures that exist on MSU's campus. The 34,000 square foot building consists of a wide variety of spaces where students can gather, hold events and programs, study, and access services.
- A new Student Recreation and Wellness Center is under construction, anticipated to open the summer of 2026. The center will provide an opportunity for students and staff to engage in recreation, proactive wellness and well-being activities. The center comprises fitness spaces, various multipurpose rooms, gymnasiums, an indoor running track, and multi-activity courts.
- In June 2024 the Facility for Rare Isotope Beams broke ground on an addition that will triple the current capacity of the FRIB Chip Testing Facility by providing two additional user vaults. The addition is anticipated to be completed in early 2026. FRIB is one of three chip testing facilities in the nation. The facility will provide educational opportunities for students in chip design and testing in addition to providing user-team testing capacity.
- In June 2024 construction began on a new research facility in Detroit supporting the Henry Ford + Michigan State University Health Sciences 30-year partnership. The partnership between two of the state's leading education, research, and health care institutions, are poised to make Michigan a national leader in providing access to exceptional health care for all residents; scientific discovery; and education for providers, patients, and families. In a landmark partnership that will last for at least 30 years, both institutions are committed to aligning efforts across key departments and programs to achieve critical health care and educational goals, while addressing social issues that impact health outcomes for patients in Michigan and beyond.
- In Fall 2024, renovations to the second floor of the MSU Library's east wing were completed to house the library's Murray and Hong Special Collections. The project included temperature and humidity environmental controls necessary to properly house the collections, as well as adjacent workspaces to prepare and maintain the collections. The special collections include over 450,000 printed works, numerous manuscript and archival collections, and an extensive collection of ephemera.

 The MSU Museum will re-open in early 2026 after a \$28 million investment in infrastructure to provide temperature and humidity environmental controls in alignment with standards for collections stewardship, storage and exhibition. The project ensures the MSU Museum will continue to be a catalyst for teaching and learning and research at the intersection of the arts, sciences and humanities

#### Impactful Research in MSU Facilities – Illustrative

MSU's research is also in the upper tiers of U.S. universities. For the second year in a row, the National Academy of Investors (NAI) ranked MSU in the top 50 U.S. universities granted patents last year. MSU was ranked 36 on the list, with 60 patents in 2024. MSU has been ranked in the top 100 universities every year since 2013, the first year the NAI began publishing the annual report. MSU's faculty bring in significant new grants for far-reaching projects. MSU reported \$721 million in research awards for FY2024-25. Most grants have substantial implications for laboratory space, equipment, and facilities. Examples include:

 In 2008, MSU's National Superconducting Cyclotron Laboratory (NSCL) was awarded the U.S. Department of Energy Office of Science (DOE-SC) project in nuclear research titled: Facility for Rare Isotope Beams (FRIB). Officially opening its doors for discovery in 2022, FRIB is a user facility for DOE-SC, operated by MSU with financial support from and furthering the mission of the DOE-SC Office of Nuclear Physics. The designation, given in 2020, demonstrates substantial commitment by the sponsoring program.

FRIB operates the world's most powerful rare isotope accelerator and serves as a world-class research and training center. The centerpiece of the user facility, a superconducting linear accelerator, will increase dramatically the reach of rare isotope research in the United States. The accelerator produces isotopes that normally exist only in the most extreme environments in the universe and will expand the usefulness of isotopes in a broad range of applications, from modeling stars to understanding the workings of nanoscale electronic devices.

FRIB cost \$730 million to design and build. In FY2014, Michigan made a commitment to bond and service the community cost share of \$94.5 million.

Since 2020, the DOE Isotope Program has provided \$13.2 million for FRIB's isotope harvesting project, covering base operations and core research. The project was completed in December 2024.

In 2022, FRIB opened the FRIB Single Event Effects (FSEE) Facility, which uses energetic and penetrating heavy ion beams to measure the response of electronic components to such ions.

In 2023, the DOE-SC awarded a cooperative agreement to establish and operate the High Rigidity Spectrometer (HRS) at FRIB, including \$115 million. This funding was in addition to the \$529 million DOE-SC awarded FRIB to support operations after the FRIB Project was completed, and following the \$199 million DOE-SC awarded for early

operations. HRS consists of two segments: the High Transmission Beam Line (HRS-HTBL) and the Spectrometer Section (HRS-SPS). The DOE-SC granted Critical Decision 2/3 approval in 2025 to FRIB for the start of execution of the HRS-HTBL, furthering its investment in FRIB science with this \$49.7 million instrument.

Also in 2023, the federal government awarded \$14 million to MSU to establish the K500 Chip Testing Facility at FRIB, which supports the refurbishment of the world's first superconducting cyclotron — built at MSU in the 1980s — into a heavy-ion chip testing facility.

In June 2024, the MSU Board of Trustees authorized construction of a highbay addition to the K500 Chip Testing Facility. The facility is scheduled for completion in early 2026.

FRIB is a critical project for American science and the state of Michigan. It will not only keep MSU on the cutting edge of nuclear science but also ensure the training of the nuclear scientists of tomorrow while bolstering the economies of mid-Michigan and the entire state. FRIB is projected to create hundreds of jobs in mid-Michigan while bringing in more than \$1 billion of economic activity to Michigan through 2030. Since 2011, in procurements and labor, FRIB has invested over 94 percent in the United States and 78 percent in Michigan. Currently, FRIB employs 565 employees, 153 graduate students, and 134 undergraduate students.

- MSU AgBioResearch encompasses the work of more than 300 scientists in seven colleges with 3-year average annual grant expenditures of more than \$94 million. These researchers, in both on-campus laboratories and at 19 outlying research centers across the state, investigate topics that range from agricultural production, alternative energy and biofuel production, food safety, and environmental stewardship to health and nutrition, community development, and the quality of life of Michigan families.
- MSU and the University of Wisconsin-Madison continue to partner in the Great Lakes Bioenergy Research Center (GLBRC). The GLBRC was established in 2007 and is funded by the Department of Energy to develop sustainable alternatives to transportation fuels and products currently derived from petroleum. Since its inception, MSU has produced 108 patent applications, 15 license and option agreements and one start-up company for the GLBRC.
- In November 2024, MSU researchers received \$4M NIH grant to study dementia risks. Nearly 7% of older people around the world experience Alzheimer's disease and related dementia. According to recent research, this prevalence doubles every 5 years and by 2025 this rate was predicted to triple. Due to this growing problem, researchers will study the potential relationship between vitamin D deficiency, gut microbial imbalance and inflammation as contributors to Alzheimer's disease and related dementia.
- Starting in December 2024, researchers at MSU will use a \$706,000 grant from the Michigan Department of Environment, Great Lakes, and Energy to advance the reuse and recycling of batteries and other critical minerals. This research is being driven by the fact that the average lifespan of lithium-ion batteries is roughly 10 years, so the need for innovative recycling strategies is becoming urgent. The project's goal is to

- demonstrate an economical, scalable, and environmentally friendly route for recycling spent LFP battery cathode materials.
- In May 2025, MSU Research Foundation designated \$75 million over the next eight years to support the university's comprehensive campaign, Uncommon Will, Far Better World. This financial support is aimed at advancing MSU's research enterprise, technology, commercialization and innovation-driven initiatives at a time when federal funding for higher education is increasingly uncertain. The foundation has worked alongside MSU to fund world-class research and bring new ideas and technologies out of the laboratories and into the real world through licensing, startup formations and corporate partnerships.
- An MSU Department of Forestry researcher received a \$500,000 grant from the Michigan Department of Natural Resources in May 2025 to study assisted tree migration designed to protect the future productivity of Michigan forests. Assisted mitigation is the process of moving trees within their native range or to new areas in which they are better suited. The overall goal of the project is to inform the DNR of which species are able to withstand predicted future climate conditions, how those trees perform important ecosystem functions and propel the Michigan forest industries forward.
- Researchers from MSU's Plant, Soil and Microbial Sciences department received a \$500,000 grant from The United Soybean Board to develop new diagnostic tools to combat herbicide-resistant weeds in soybeans. The primary method of weed eradication has been chemical control, but growers and researchers are seeing increased levels of resistance in several weed species. The herbicide-resistant weeds cost U.S soybean growers more than \$2 billion annually. The purpose of this research is to develop rapid diagnostic tools for resistance detection, increasing screening capacity, and improving chemical management recommendations, all to help soybean farmers.
- A new \$3 million NIH grant announced in July 2025 will support Henry Ford+ MSU
  Health Science researchers studying HPV positive head and neck cancers. A growing
  number of these cancers are found in those who also carry the human papillomavirus,
  so this research offers great potential to develop new solutions, including
  immunotherapy, which will help activate the body's immune system so the cancer can
  be eliminated with fewer side effects.
- In October 2025 researchers from MSU's Department of Psychology received a \$3.7 million grant from the National Institute of Mental Health to study the impacts of perimenopause on mental health. The study will follow 750 women aged 40–60 as they collect daily saliva samples and complete detailed questionnaires to help researchers track hormone levels and psychological symptoms. Uniquely, this research captures daily hormone variations, something never accomplished in previous studies. The researchers hope their work will lead to better health care approaches, more personalized treatments and increased awareness about women's midlife experiences.
- MSU's Department of Computer Science and Engineering announced in October 2025
  that researchers have received three new National Science Foundation grants, which
  total \$1.16 million. One researcher will use \$268,000 in funding to make artificial
  intelligence (AI) systems safer and more reliable. Two other researchers will share
  \$600,000 in research funding for a three-year project to develop robust AI-based

techniques for more effective management decisions and disaster preparedness. The final \$300,000 grant was awarded with the goal of making graph data more compact, cleaner, and better aligned. The project will enable more efficient, accurate, and robust AI systems across healthcare, finance, and national security.

- An MSU College of Human Medicine researcher received the NIH Director's Transformative Research Award to develop a new molecular tool that studies how brain cells communicate. Their work opens new doors in neuroscience research and could lead to future gene therapies for brain disorders. The 5-year, \$4.2 million grant awarded in October 2025 is part of the NIH's High-Risk, High-Reward grant program which supports innovative research projects that challenge existing paradigms and demonstrate potential for broad impact in the field. These innovations could transform how the brain is studied and the treatments made available to those with neurologic disorders.
- In October 2025, two MSU physicists received private \$1.3 million five-year grants. The first grant will fund research to pioneer a completely new way to investigate how electrons behave when confined to one- and two-dimensional structures and how they can be harnessed for quantum technologies. Researchers will create devices for combining superconducting quantum circuits and quibits, with electrons floating on liquid helium. The second grant will fund research that focuses on investigating the fundamental imbalance between matter and antimatter in the universe by studying a rare, short-lived atomic nucleus called protactinium-229. It is thought to have an unusual pear-shaped structure that may make it especially sensitive to unknown physical forces that behave differently when time is reversed. By embedding these nuclei in special cryogenic crystals and measuring subtle changes using precision instruments, researchers aim to develop a highly sensitive new method for detecting signs of physics beyond current scientific understanding.
- The new Large Animal Facility for Imaging and Image-guided Therapies located in Clinical Center Building D, one of only a few such medical diagnostic facilities in the world, is anticipated to open in spring 2026. MSU was awarded a \$6.7 million National Institutes of Health (NIH) grant in 2021 that, in coordination with university contributions, funded the new facility, through renovations, for the development of new imaging agents and treatments of diseases that afflict both humans and large animals. MSU will also receive an in-kind donation of positron emission tomography (PET) scanning equipment from the manufacturer to be used in the new facility.
- On August 26th, 2025, the CHM cut the ribbon on its expanded public health research facility. In 2022 the Charles Stewart Mott Foundation granted \$25 million to expand MSU's College of Human Medicine (CHM) public health presence in Flint, MI. The expansion, made possible by a public-private partnership, will recruit 18 additional researchers and staff, which could total over 200 people, and is part of the CHM's continued collaboration with the city of Flint. The new researchers will focus on health barriers, social determinants of health, behavioral health, healthy behaviors, chronic disease, maternal-child health and environmental justice, among others.

#### III. Staffing and Enrollment

The continuing high quality of MSU's educational offerings has led to a steady increase in demand from students in Michigan and around the world. Indicators of this increased demand include:

- MSU received 64,492 first-time undergraduate applications this year, well exceeding last year's 62,138. MSU's total enrollment for Fall 2025 is 51,838.
- MSU welcomed 10,720 new undergraduate students (first-time and transfers). Of the 9,355 first-time students, there were 2,724 students of color and 4,962 women. When added to MSU's returning students, for a total of 41,415, it is MSU's largest number of undergraduates to date.
- Total graduate enrollment, including graduate professional students, is 10,423, of which 1,754 are new graduate master's and doctoral degree-seeking students, and 743 are new graduate-professional degree-seeking students.
- Michigan residents represent 73% of enrollments and 78% of the university's undergraduates. MSU students come from all 83 counties in the state.

Fall 2025 enrollment at Michigan State University represents careful and deliberate enrollment management to maintain academic quality and optimal classroom and laboratory environments for all students. A summary of enrollments for fall 2025 by college and level, as well as tenyear enrollment history can be found in Appendix D. Based on Michigan demographic data, enrollment management practices at the University, and current faculty/staff and physical infrastructure resources, enrollment patterns over the next five years are projected to remain stable overall with high demand for an MSU education.

While the university currently offers bachelor's, or bachelor's completion programs, and master's programs off campus and intends to increase the number of learners we serve through an online learning strategy that provides wider access through targeted programs, it is important to note that the vast majority of students utilize the facilities of MSU's East Lansing campus to complete their degree programs. The university will continue to expand opportunities to offer instruction that complement traditional academic programs, but the demand for on-campus experience remains high.

The preliminary count of active faculty and academic staff count for fall 2025 is approximately 5,995. Of that total, a significant percentage is engaged in instruction, with the rest distributed across research, public service, academic and student support services, and other institutional functions.

As of Fall 2025, the current average class size for lower division undergraduate classes is 50 students. The average class size is 37 for upper division undergraduate classes and 14 for graduate classes. The most recent calculation of the student/faculty ratio is 17:1, which is consistent with the Big 10 public average.

#### III. Facilities Assessment

MSU recognizes that its physical infrastructure requires ongoing evaluation, maintenance, and renovation in a manner that is consistent with the scope, scale, and high quality of its personnel and programs. As one of MSU's most important assets, the built environment supports the institution's academic mission of teaching and learning, research and innovation, and outreach and engagement. University facilities create a sense of place for the campus and surrounding communities, and support the success of students, faculty, and staff.

The college and program units systematically provide annual programmatic facility reviews and forward space needs, including alteration and improvement requests, and major capital planning needs through the annual budget and planning process. This process identifies high-priority programmatic needs and informs the development of the annual 5-Year Capital Plan.

Given the dynamic nature of higher education, the planning horizon for academic and academic-support programs is typically five years. Examples of identified projects include comprehensive renovations of a research lab to support current research foci and sophisticated research equipment and modifications to office and dry research space for improved efficiency and program functionality, and to align with modern teaching and learning and work modalities. The planning process informs broader capital needs by identifying programmatic areas that would benefit from new construction or major renovations.

- Based on the most recent planning cycle, approximately \$20 million is needed in fiscal year 2026 to address high priority, selected programmatic improvements. It is anticipated that this magnitude of funding is needed on an annual basis to address these selected programmatic improvements of a smaller scale given the limited resources, age of the physical plant, strategic plan goals for growth in research over the next 5 years, and changes in curriculum and evolution of teaching and learning methods and student learning experiences. In addition, the impact of a recently expanded range of work modalities in particular associated with office and office support spaces, presents potential space resource challenges to align demand and functionality.
- This planning enables the university to coordinate projects and assemble the work scope to reduce overall project costs by coupling programmatic alteration needs with infrastructure improvements and the removal of maintenance items. As a result, limited building improvement funds are expended more effectively.

Vision 2050: An Integrated Facilities and Land Use Plan includes several goals that will impact space and facility needs, including work modalities, teaching, and learning modalities; increase in research expenditures; multi- and trans-disciplinary research; and student support services.

#### **Academic Facilities**

Our continued success in meeting our value proposition of high-quality programs with access to qualified students demands that we continue to provide high-quality, collaborative, flexible, technology-enabled, and expanded academic and instructional spaces. These teaching and learning environments need to support emerging pedagogies, including those that support curriculum revisions, student-centered, collaborative, and self-guided learning. The learning environments, coupled with the changing modalities and curriculums, provide opportunities for

research and leadership in instructional methods while fostering innovation through a technology-rich environment.

Approaches to teaching and learning have become more interactive across all disciplines, and the use of instructional technology has significantly enhanced what faculty and students accomplish in classrooms, teaching labs, and informal learning environments. All areas of research, instruction, and outreach incorporate technology and the underlying infrastructure that makes it possible.

Many of the university classrooms have received updates to support active learning principles and emerging technologies that facilitate the exchange of ideas and collaborative interactions. However, given the scope and scale of MSU, annual and on-going investment is necessary to provide quality instructional environments that keep pace with progress in technology and pedagogy, including student-centered, collaborative, and self-guided learning.

A comprehensive classroom renovation can range in cost from \$250,000 for a small classroom to \$1,000,000 for a lecture hall. An estimated \$6 million annually is needed to support multi-year strategic planning for the over 320 university classrooms, including the potential to fund broad strategic instructional initiatives over time. Coupled with the necessary technological needs for the university's teaching and learning spaces, the total need is \$12 million annually to keep pace with changing pedagogies and provide high quality instructional spaces on par with the educational experiences MSU is known for. While the university continues to make significant improvements, further investment is necessary to address aging spaces in order to keep pace with the changes in learning methods and modality; to continue to add value; and remain competitive in the recruitment and retention of high-quality students and faculty and increase participation at both the undergraduate and graduate levels.

- The University maintains over 320 centrally scheduled classrooms, lecture halls, and over 800 departmentally assigned instructional spaces. These spaces account for approximately 1.2 million square feet of space at MSU.
- For fall semester 2024, utilization of these instructional spaces by scheduled instructional periods ranges as high as 87% of the available hours, and averages 65% for centrally scheduled classrooms, excluding events. The seat utilization ranges as high as 62% of the available capacity and averages 56% across all rooms. In a typical academic year, one-time scheduled events such as help sessions, department, and student organization meetings increase utilization by 6%.

Departmentally scheduled class laboratory spaces that are scheduled regularly for courses average 37% across all rooms and disciplines and range as high as 59% of the available hours. This utilization does not include prep or clean-up time, open lab time for tutoring, or student research use. The seat utilization ranges as high as 71% of the available capacity and averages 52% across all rooms and disciplines.

40% of the instructional space is in fair condition, 10% in poor condition, with the remaining 50% in good to excellent condition. Rooms requiring upgrades may need either comprehensive or selected renovations. These may include replacement of furniture, ceiling, and lighting; painting; upgrade of power and data; and replacement of lab benches and fume hoods. Rooms requiring upgrades are identified through a multi-

year improvement plan that is informed by on-site reviews of each room, input from users, and analysis of room utilization, as well as the academic program planning process.

Quality support services, such as libraries, technology integration, specialized labs, field stations, clinics, informal learning areas, and state-of-the-art equipment also need to be sustained at a commensurate level with support of nationally competitive research and scholarship efforts that are consistent with instructional goals. The convergence of these factors calls for increased investment in the facilities and equipment that support these developments. It also calls for the creation of new learning environments that support the increase in STEM student credit hours and our commitment to educate, train, and graduate more students in STEM, as well as provide more opportunities for informal and self-guided learning.

Further, MSU's steady increase in enrollments, in excess of 10,000 new undergraduate students annually, creates additional demand for these physical resources. The STEM Teaching and Learning Facility that opened in 2021 begins, in a more significant way, to address this need. The Engineering and Digital Innovation Center, submitted as the MSU SFY2024, SFY2025, SFY2026, and SFY2027 Capital Outlay request, would continue this trajectory and is a critical part of the future delivery of the MSU teaching and learning ecosystem. State of Michigan support is critical.

#### Campus, Facilities, and Infrastructure

The institution's assessment of existing facilities shows that the infrastructure components of many campus buildings have aged significantly. Despite ongoing maintenance and repair, which in most cases has extended the expected usable life of components well beyond the industry standard, many buildings are now at a point where they require significant investment or may need to be replaced.<sup>4</sup>

The demands placed upon building systems by updated building codes and more sophisticated programs, many of which are equipment- and ventilation-intensive, have resulted in facilities that act as a barrier rather than a support to program success. For example, higher environmental protection and safety standards place pressure on day-to-day maintenance and, in some cases, exceed the capacity of particular systems.

The proliferation and advancements in technology across disciplines requires updating data resources and distribution systems. The configuration of older building spaces limits the efficient use of the areas available to programs and can hinder collaboration, interactions, and interdisciplinary work, which is increasingly important in today's learning, research, and work environments. Increasingly complicated and environmentally sensitive equipment places higher demands on power for operating and climate control for proper functioning.

Renovations and new construction are necessary to provide capacity; improve quality and utilization; address functional obsolescence and align infrastructure and programmatic needs for both instruction and research. This is especially true when current facilities are either too

-

<sup>&</sup>lt;sup>4</sup> See Appendix C: Map of Campus Buildings by Age.

costly to renovate compared to the benefits realized and/or inadequate in the amount of space, and functional alignment provided.

The needs for existing facilities include repairing and replacing internal building systems such as electrical, plumbing, mechanical, and structural renewal; reworking interiors to increase the utilization and functionality of the space; and attending to the building envelope to maintain the integrity of the building. In some cases, the improvements are needed for only selected aspects of a facility; in others, total renovation and/or replacement of the building is warranted.

In response to MSU's facilities assessments, reviews of programmatic needs, functional alignment and adjacencies, coupled with accelerating changes in work modalities and organizational changes, MSU completed a Workplace Strategic Framework Planning Study in 2025. The study has provided a better, more detailed understanding of how campus buildings are used. Outcomes from the study will guide our space planning and allocation for office and office support functions through the creation of updated space guidelines reflective of modern work modalities and guiding principles. The goal of the framework is to ensure a physical environment that fits with current and future workplace requirements and the university's strategic goals of sustainability and resource stewardship.

Perceptions of the built environment are a significant component in the overall campus experience.

- The physical infrastructure of Michigan State University broadly encompasses buildings; utility generation and distribution system; the electronic network; the security systems; and the campus grounds, including the natural and built landscape, sidewalks, roadways, and paved parking.
- The campus grounds, including the natural and built landscape, are a principal aspect of the campus infrastructure. The main East Lansing campus is approximately 5,200 acres, or eight and a half square miles. The developed campus approximates 2,000 acres, and the experimental research farm area approximates 2,700 acres with the remaining supporting auxiliary activities. Off-campus MSU land covers approximately 21,000 acres for a total of 26,200 acres across the state.
  - Despite this rich land area, the planning process recognizes that land resources are finite and should be conserved for future generations. As a result, the Vision 2050: An Integrated Facilities and Land Use Plan for Michigan State University adopted compact campus development. While allowing for some horizontal expansion across the campus, the plan protects the capacity and contiguity of the farm areas, uses a strategy of carefully conceived "infill" in some portions of campus, and careful replacement of existing facilities that have reached the end of their useful lifespan to minimize net new development in other areas of campus.
- The developed campus, and the North Campus "Circle Area" in particular, is recognized as one of the nation's most beautiful campuses. The open space quality of this area, the Red Cedar River corridor, and the Sanford and Baker woodlots are highly regarded and reinforce the social and intellectual vitality of the campus. The campus arboretum grows over 1,000 different taxa, represented by more than 19,400 individual trees, and

innumerable shrubs and vines which serve as a collection for research, teaching, beautification, and health and wellness.

The developed landscape's estimated replacement value exceeds \$465 million.

- MSU's transportation system encompasses 58 lane miles of university-owned roadways, with a replacement value of \$54.9 million.
  - The condition of the roads is estimated to be 4% poor, 33% fair, 56% good and 7% excellent. MSU prioritizes improving safety for vehicles, pedestrians, bicyclists, and other motorized transport as streets are rebuilt.
- The university owns seven bridges on campus; four are for pedestrians only and three are for both vehicles and pedestrians. The university is responsible for cosmetic maintenance of two train bridges. The bridges have a replacement value of \$83.2 million. Three bridges are in good condition, and four are in excellent condition. Reconstruction of the Farm Lane bridge was completed in summer 2024. The reconstruction restored the bridge to its full capacity and included the construction of a new pedestrian bridge to improve safety and address critical utility infrastructure needs. The bridge carries over 12,000 vehicles and 7,000 pedestrians on a typical class day.
- By MSU Board of Trustees policy, the parking system of approximately 29,400 spaces for students, faculty, staff, and visitors is self-supporting and has a replacement value of approximately \$349.5 million: \$182 million for seven parking structures and \$167 million for surface parking. One parking structure is in poor-to-fair condition, three are in good condition, and four are in excellent condition. The condition of the approximately 24,500 surface parking spaces breaks down to 35% in poor condition, 17% fair condition, 39% good condition and 9% in excellent condition.
- There are 116 miles of walkways valued at \$57.7 million.
- The All-University Traffic and Transportation Committee addresses the issues related to parking access, the associated cost implications, and ways to increase use of mass transit and non-motorized transportation. MSU continues it's long-standing partnership with the Capital Area Transport Authority to provide service on-campus and surrounding area routes.
- Main campus inter-building communications is comprised of an underground fiber optic distribution system that supports network data, VoIP telephone, contact center, cable television, cellular, two-way radio dispatch, and other specialized services. The fiber optic system interconnects 236 unique structures on campus. Wireless equipment provides connections for additional structures in the south-campus farm district, well water pump facilities and other critical infrastructure with planning under way to replace this legacy service with direct fiber optic connections. After the upgrade, MSU will have 297 unique structures with high-capacity underground fiber optic connections. In addition to the fiber optic distribution system, each building has internal cabling infrastructure and equipment with approximately 85% in need of significant infrastructure and equipment upgrades to keep up with operational demands. WiFi service is provided by over 13,900 wireless access points. Approximately 59% of main campus buildings have full WiFi coverage, 21% have partial WiFi coverage and 20% have little or no Wi-

Fi coverage. All residence halls have WiFi service in student rooms, dining halls and related gathering places.

MSU IT is in the beginning phase of a multi-year campus-wide strategic initiative to modernize the network infrastructure, which is inclusive of both wired and wireless networks. The initiative will focus on current network needs as well as forward planning to meet increasing network demand.

The estimated replacement value of campus data network infrastructure is over \$98.3 million and annual maintenance costs exceed \$14.0 million.

Off-campus sites in the Lansing metropolitan area are connected to the MSU data network via a 45-mile fiber optic ring operated by Zayo Enterprise Networks. Facilities across the state, those outside of Lansing, are connected via Merit Network, Inc., or other local service providers.

External data network connectivity from the main East Lansing campus is provided via redundant links to the commodity Internet and to the research focused Internet2 network via Merit Network, Inc.

- Cellular infrastructure from all four national cellular carriers is installed on main campus building rooftops and other structures. This carrier-owned equipment provides enhanced service coverage and capacity for the public, university employees, and large campus events.
- Michigan State University has over 25 million gross square feet of building space in 568 structures, including both general-fund and self-supporting facilities. The replacement cost of the buildings is calculated at \$8.1 billion. University general-fund buildings account for approximately 14.63 million square feet representing \$5.8 billion in replacement costs. Residential and Hospitality Services and other self-supporting facilities account for approximately 10.9 million square feet and the remaining \$2.2 billion.

Facility condition assessments, including the utility distribution system, are updated on an ongoing basis using input from university maintenance, custodial staff, users of the buildings, and external consultants. College and program units also provide programmatic facility reviews and identify needs through the annual budget and planning process.

Building capital renewal needs are assessed on many campuses utilizing the "industry-expected useful life" of the significant building components. Adjustments to life expectancy are made for systems or components that show a strong maintenance history and better-than-expected performance. This delays the projected renewal year aligning its actual condition with performance. For MSU, the effective maintenance program typically results in building components lasting much longer than industry standards.

MSU manages and forecasts major repair and replacement needs through its capital renewal program. The program prioritizes facility needs that address life safety, accessibility, asset performance, resource efficiency, and renewal of critical building systems. This process considers the age of major building components adjusted to

account for each component's maintenance history and current condition based on field observations. Facility Condition Assessments (FCAs) have been completed for all East Lansing campus facilities. The process identified recurring life cycle renewal needs, non-recurring needs, and provided estimated action years and costs.

• The utility generation and distribution systems are major components of the campus infrastructure. The generation system includes:

The T. B. Simon Power Plant, a natural gas-fired Combined Heat & Power (CHP) power plant which generates up to 98.5 MW of electricity and 855 kpph steam to meet campus needs. The power plant consists of Units 1 & 2 (1965), Unit 3 (1975), Unit 4 (1993), and Units 5/6 (2006). The condition and replacement value of this facility is being assessed as part of the Utility Master Plan effort currently underway.

A new RICE Plant (2022) which consists of three (3) x 9.4 MW natural gas engines capable of generating up to 27.9 MW of electricity to meet campus peak power demands allowing the CHP plant to operate more efficiently.

A new natural gas-fired low pressure steam boiler (2023) supplying up to 200,000 pounds per hour of steam directly to campus for building heating and cooling to meet peak steam demands allowing the CHP plant to operate more efficiently.

An interconnection to the local utility electrical distribution power grid through the 100 MW Spartan Substation (new in 2016).

A 7-million gallon per day drinking water treatment plant (2020) and 2-million-gallon water storage tower (2020) which treats water produced from 17 water wells to provide drinking water to north campus and for power plant feedwater. This new plant enabled the decommissioning of a water reservoir on main campus.

• The utility distribution system includes 72.5 miles of water lines, 27.5 miles of steam lines in tunnels, 3.5 miles of direct buried steam lines, 168 miles electrical conduit and cable, 113 miles of communication cable and fiber, 159 miles of storm and sanitary sewers, and more than 4 miles of chilled water distribution. MSU made significant investment to update the north campus steam and electric tunnel and distribution systems. The south campus systems need repairs to provide reliable service and meet the service demands of the overall campus community. Additionally, most facilities south of Mt. Hope receive untreated drinking water, have limited firewater flow and coverage, and use less reliable electric supply from local utilities. MSU is developing a Utility Master Plan to understand current conditions, projected growth, and utility demand requirements with targeted completion in Winter 2025.

#### Michigan State University's Strategic Commitment to Sustainability

In August 2025, Michigan State University unveiled its refreshed strategic plan, MSU 2030: Excellence for Global Impact. Among its six strategic priorities is Stewardship for a Sustainable Future, which builds upon and supersedes the 2012 Energy Transition Plan. This renewed focus underscores MSU's commitment to move toward carbon neutrality by 2050, while balancing fiscal responsibility, environmental stewardship, and social equality.

MSU has made significant strides in reducing greenhouse gas (GHG) emissions, making progress in its efforts to achieve carbon neutrality:

- In April 2016, the university completed the transition from solid fuel (coal and biomass) to 100% natural gas at the T.B. Simon Combined Heat and Power Plant. This shift reduced GHG emissions by over 36% since 2010.
- Through a Power Purchase Agreement (PPA), MSU installed Solar Carports over five of its largest commuter parking lots, covering 5,000 parking spaces. Operational since December 2017, these solar arrays generate up to 10.5 MW peak power, supplying 7% to 11% of the university's annual electricity needs.
- Recent upgrades at the T.B. Simon Power Plant have supported MSU's sustainability goals by modernizing the campus energy structure. For example, the natural gas-fired steam boiler, commissioned in January 2023, is more compact, efficient, and flexible than the older power boilers at the power plant, enabling reduced emissions and operational costs without sacrificing reliability; and the three new natural gas-fired reciprocating internal combustion engines (RICE), can be started and stopped more readily to adjust quickly to changing campus power needs, unlike the older boiler and steam turbine systems.
- MSU is committed to being a good steward of resources by reducing consumption and greenhouse gas (GHG) emissions and increasing recycling. The commitment to recycling is supported by the MSU Surplus Store and Recycling Center (SSRC). Due to the efforts of the SSRC, the amount of waste on campus has declined even as the Spartan community and campus grows. Since the MSU recycling services began in 1990, MSU has decreased its yearly landfill totals by 55%. In MSU's SSRC's 2024 Strategic Plan, MSU's SSRC committed to increasing the rate of material collected that is diverted from the landfill from 44% to 60% by the end of FY2027. Through waste management programs like vermicomposting and engagement programs like Spartan Upcycle, SSRC has highlighted the importance of sustainability both in education and in practice on campus. In Fall 2023, MSU's SSRC received the 2023 NACUBO Excellence in Sustainability Award. The award recognizes institutions for a specific campus innovation, process or program that advances environmental sustainability in higher education or progress toward a more environmentally sustainable future.
- University properties beyond the East Lansing campus cover approximately 21,000 acres and contribute to the built environment with 19 AgBioResearch research centers across the state (the Kellogg Biological Station and Saginaw Valley Research and Extension Center are examples). Other agricultural field research locations include the South Campus Farms teaching and research centers. Sites supporting other programs include the BioEconomy Institute in Holland, Tollgate Farm and Education Center in Novi, The Management Education Center in Troy, WaWaSum in Grayling, Hidden Lake Gardens in Tipton, and The Secchia Center and Grand Rapids Research Center in Grand Rapids. The replacement value for the facilities located at these sites is calculated at more than \$400 million.
- Upgrades to existing research space to meet current technological, regulatory, and operational requirements of researchers and funding organizations are needed.

Research maintenance items consist of both wet and dry lab upgrades and equipment replacement, and conference facilities upgrades to support extension and outreach activities. General maintenance and infrastructure improvements include exterior repair/replacement; technology and security upgrades; environmental enhancements for storm water and process water management; energy efficiencies; regulatory requirements; and mechanical upgrades that include electrical, plumbing, and heating, ventilation, and air conditioning (HVAC). Other facility maintenance and repairs include well and septic systems, roadways, and parking areas. With more than 400 buildings located at various off-campus research, teaching, and extension facilities. The replacement value for off-campus facilities is calculated at more than \$1 billion.

The following university facilities received funding through the State Building Authority and have State Building Authority leases:

Facility Description	Expected Lease End Date
Animal Health Diagnostic Lab	10/31/2040
Bio-Physical Sciences Building	3/31/2037
Chemistry Building Renovations/Cooling Towers	10/31/2043
Bioengineering Facility	7/31/2051
STEM Teaching and Learning Facility	6/30/2056

MSU does not have any on-going projects financed with State Building Authority resources. However, MSU received state appropriations for the following projects that are currently in construction: Renovation and Addition of Greenhouses and Dairy Facilities with \$53 million appropriated in Public Act No. 166 of 2022. The proposed Engineering and Digital Innovation Center was appropriated \$30 million in the SFY2024 Higher Education budget with an additional request to the state for \$70 million in SFY2027 for a total state contribution of \$100 million.

#### V. Implementation

Michigan State University's approach to capital planning employs a continuous process that integrates academic, support, human resources, fiscal, and facility infrastructure planning. Institutional participation in the planning process ensures that consideration is given to relevant issues and that decisions reflect the fundamental mission and direction of the university.

Capital needs are guided and informed by the university's Strategic Plans, Capital Planning Framework, Campus Land Use Plan, and planning activities that occur within major components of the institution at regular cycles throughout the year. These components include the annual academic, administrative, and auxiliary budget and planning reviews combined with capital renewal, technology, utility systems, energy, and sustainability planning, as well as planning for transportation (roads and sidewalks), parking, and open space. Within this context, budgetary and fiscal analyses at the local, state, and federal levels are considered.

Within each component of planning, several more detailed issues are reviewed and examined relative to their impact on facilities over the short- and long-term. One approach used for this

more detailed planning is the Executive Committee for Buildings Facilities and Space and the Campus Infrastructure Planning Work Group. These groups bring together a comprehensive cross section of university constituents, that evaluate projects on several dimensions to ensure thoroughness of planning, conformance with campus land use planning principles adopted by the MSU Board of Trustees, alignment with the strategic plan, and impact across the university.

As a matter of operating philosophy and practice, facility planning encompasses the following issues:

- Renovations, as well as maintenance of existing campus facilities, and new construction are focused on supporting programs that are central to the academic mission of the university.
- Planning is holistic and comprehensive. In addition to capital renewal of existing facilities, academic program needs are considered, including adjacencies, utilization, and work and learning modalities, and facility adaptation is planned accordingly. A premium is placed on reuse of existing facilities, conservation of open space, energy conservation, and health, safety, security, and regulatory requirements. Barrier-free modifications are given priority and needs related to technology are incorporated. Where appropriate, fixed building equipment, particularly for laboratories and instructional spaces, is included in the plans.
- New construction, additions, and renovations are planned to align a project's financial investment with the facility's life cycle and program needs, while allowing flexibility for future change. Least life cycle cost analysis ensures facilities can meet current program needs and adapt over time to evolving programs or technologies.
- The least life cycle cost analysis enables project development to focus on designs that reduce the ongoing maintenance cost of facilities. MSU's high-quality construction standards intentionally create plans and assemble materials that "design out" as much near and long-term maintenance as possible.

In summary, the anticipated expenses of a facility over its life cycle are carefully considered in relation to the initial investment in design and materials.

Through facility-planning activities, MSU recognizes that campus programmatic and facility capital renewal issues are significant and constantly evolving. As a result, needs exist simultaneously in three major areas:

- Renovations and Additions
- 2. New Construction
- 3. Major Systems Maintenance and Utilities

Many more needs exist than can be addressed at any one time. However, within this context and informed by the planning processes described above, the "Engineering and Digital Innovation Center" remains the institution's Capital Outlay project request, as noted in Section I of the following table.<sup>5</sup> Other projects included in Section I of the table reflect the institution's anticipated capital project needs for the 5-year planning framework. Projects listed in Section

<sup>&</sup>lt;sup>5</sup> See Appendix G for the State Fiscal Year 2027 Capital Outlay Project Request – "Engineering and Digital Information Center."

Il are currently in active planning or in process, with funding primarily from institutional resources.

### Capital Planning and Major Maintenance SFY27-32 Planning Timeframe: One to Five Years

Section I: MSU Capital Outlay SFY27 5-Year Planning	
	FY26 Est. (mil.)
Capital Outlay Priority – New Construction	
Engineering and Digital Innovation Center (EDIC) - New Construction - Research and Teaching Support and Expansion	\$340.0M
MSU 5-Year Capital Planning (Alphabetical Order) Renovations and Additions	
4000 Collins Rd./Office Complex Bldg Refrigeration System Replacement	\$3.6M - \$4.2M
Akers Hall - Student room furniture/case goods replacement (312 rooms)	\$1.0M - \$1.5M
Auditorium Building - Renovation of the main auditorium to support teaching, learning, outreach	\$33.6M - \$59.2M
Bio-Engineering Facility (IQ) - Build-out 3rd and 4th Floor - Bio Design	TBD
Biomedical Animal Resources - Provision for Large Animal - Housing and Surgery	\$15.8M - \$23.8M
Breslin Center-Arena special event lighting control panel replacement (lifecycle)	\$1.0M - \$1.3M
BSL-3 Research Expansion - Additional Labs	\$18.8M - \$22.6M
BSL-3 Research Expansion - Multi-Species Flexible - Housing/Procedure Space (Ph 2/2)	\$13.5M - \$15.0M
Center for Integrative Plant Systems (CIPS) Demolition	\$7.3M - \$8.3M
Clinical Center A-Wing - Renovate for Research Expansion	\$172.0M - 193.5M
Clinical Center B-Wing - Renovate for Research Expansion & Learning	\$21.2M - \$28.4M
Clinical Center/Radiology Renovations and Cyclotron Instruments	\$4.8M
College of Social Science - Office and Teaching Lab Renovations in Berkey Hall	\$2.0M
Engineering - Renovations - Research and Learning (New Construction Related Backfill)	\$12.8M - \$16.2M
FRIB Electrical Substation Replacement	\$4.8M
Grand Rapids Research Center (GRRC) 5th Floor Lab Fit-out	\$9.7M - \$10.1M
Greenhouses - Phase 2 - Renovations and Replacements	TBD
HCl Ambulatory Surgery Center - renovations to 4700 Hagadorn Rd.	\$9.0M - \$10.0M
HCl Hagadorn Renovations for Future Clinical Consolidation and Expansion	\$2.4M - \$3.2M
High Energy Ion Single Event Effects Testing Facility	\$416.0M
Holmes Hall-Student room furniture/case goods replacement (664 rooms)	\$1.5M - \$1.6M
Hubbard Hall- Student room bed replacement (1250 beds)	\$1.0M - \$1.3M
IM West Planning Study	\$5.2M
Incinerator Building Replacement	TBD

Kinesiology Space Improvements and Expansion - Renovation and/or New Construction	TBD
Kresge Art Center - Comprehensive Renovations - Teaching and Learning, Research	\$56.0M - \$60.3M
Learning Space Improvements - Annual Investment for Upgrades & Improvements (\$6M annually)	\$6.0M
Library North Plaza	\$10.0M - \$11.0M
Life Science Building (A&B) HVAC replacement and related (phased approach)	\$126.0M - \$144.0M
Life Science Building Replace PCB transformers and related equipment	\$2.1M
McDonel Hall-Student room furniture/case goods replacement (580 rooms)	\$1.3M - \$1.5M
MSU Museum Collections Facility	TBD
Old Botany - Comprehensive Renovation	\$13.9M - \$14.9M
Pavilion - Building Addition	\$9.0M - \$17.0M
Plant Biology Building - Renovate for Plant and Environmental Science Research, Teaching and Learning - including Core Aquatic Facility	\$130.0M - \$150.0M
Starbucks Renovation at 1855 Place (required by contract)	\$1.3M - \$1.5M
Strategic Workplace Improvements - Hannah Administration and Olds Hall	\$8.0M - \$10.0M
Veterinary Teaching Hospital - Renovation and/or New Construction	TBD
New Construction - New Building	
Chemical Waste Facility - New Construction	\$42.1M - \$42.5M
Transportation Services Center Relocation	\$26.1M - \$28.7M
Major Systems Maintenance & Utilities (Alphabetical Order)	
#2 Steam Turbine Generator Stator Rewind	\$3.2M - \$3.6M
Breslin Center Masonry Restoration	\$3.1M - \$4.2M
Case Hall - 2 Passenger Elevators I of II Lifecycle Replacement	\$1.0M - \$1.6M
Case Hall - 2 Passenger Elevators II of II Lifecycle Replacement	\$1.0M - \$1.6M
Communication Arts Replace controls on HVAC units 1-15	\$1.1M
Computer Center Replace PCB transformers and related equipment	\$3.1M
Demolition - Unit 4 Boiler and Replacement w/ New High Pressure Boiler	\$30.0M - \$40.0M
East Cooling Tower Replacement	\$9.7M - \$10.2M
Food Science Replace PCB Transformers and Related Equip.	TBD
Replace Water Main Distribution - (\$1.0M annually FY26 - FY29)	\$1.0M
Hannah Administration Floor Drain Repairs/Relining	\$1.3M- \$1.4M
Holden Hall Replace PCB transformers and related equipment	\$1.6M
Holmes Hall - New - Life Safety System (installation located in all areas of building)	\$16.4M - \$16.6M
Holmes Hall - Living wings-vertical riser-domestic water supply piping lifecycle replacement	\$7.3M - \$7.8M
Human Ecology Replace sub-basement sanitary mains	\$1.0M - \$3.0M
Install 4th RICE Engine	\$22.4M - \$23.7M

Kellogg Center - 4 Elevator Replacements Lifecycle Replacement	\$2.6M - \$3.1M
Kellogg Center-tower roof replacement and chilled water loop replacement; masonry repairs on tower	\$1.6M - \$1.9M
Library Replace fire alarm system	\$2.6M - \$4.2M
Linen Services Replace Electrical Susbstation and Medium Voltage Switchgear	\$3.1M - \$4.1M
McDonel Hall - 2 Passenger Elevators I of II Lifecycle Replacement	\$1.0M - \$1.6M
McDonel Hall - 4 Passenger Elevators II of II Lifecycle Replacement	\$1.0M - \$1.6M
McDonel Hall - New - Life Safety (installation located in east and west living wings)	\$11.1M - \$11.4M
McDonel Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement I of V	\$1.3M - \$1.6M
McDonel Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement II of V	\$1.3M - \$1.6M
Modifications to Consumers Gas Supply - Gas Compressor Bldg. Replacement	\$1.5M
Munn Ice Arena LED replacement	\$1.0M - \$1.1M
Natural Science HVAC System Replacement/Renewal	TBD
Olin Health Center Infrastructure Renewal	\$30M - \$32M
Outdoor Track Relocation	\$5.2M - \$6.0M
Owen Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement II of IV	\$1.3M - \$1.6M
Owen Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement III of IV	\$1.3M - \$1.6M
Owen Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement IV of IV	\$1.3M - \$1.6M
Power Plant Substations (4160V) Renewal and Expansion	\$12.0M - \$15.0M
Public Safety Replace fire alarm system	\$1.6M - \$3.1M
Regional Chilled Water Plant Replace Chillers 9 & 10	TBD
Replace combustion turbine rotating assembly	\$3.6M - \$4.7M
Replace Power Plant Motor Control Centers	\$3.2M - \$3.5M
Replace Wells/Wellhouses (Phase 3)	\$2.1M - \$3.1M
Restore Storm Sewer Outfalls at Red Cedar River	TBD
Spartan Child Development Center Replace Fire Suppression Systems	\$1.0M - \$1.3M
Spartan Stadium LED Replacement	\$10.0M
Spartan Village Apartment Buildings Decommissioning 1 of 2	\$3.1M - \$3.6M
Spartan Village Apartment Buildings Decommissioning 2 of 2	\$3.1M - \$3.6M
Steam distribution renewal (\$1.0M annually through FY29)	\$1.0M
TB Simon automated load shedding system	\$1.0M
TB Simon Install Second Reverse Osmosis System	\$1.0M - \$2.1M
Transition to off-site generation for demineralizer	\$1.0M - \$1.6M
VanHoosen Hall - Apartment renovations; new life safety system installation; mechanical renewals	\$1.9M - \$2.1M
Vet Diagnostic Lab - Replace Chillers	\$5.0M - \$8.0M
Vet Med Center - Elevator Replacement	\$1.5M - \$1.7M
Wharton Center Elevator Replacements	\$2.1M - \$2.3M
Wilson Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement II of V	\$1.3M - \$1.6M
L	.1

Wilson Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement III of V	\$1.3M - \$1.6M
Wilson Hall-Living wings-vertical riser-domestic water supply piping lifecycle replacement IV of V	\$1.3M - \$1.6M
Wilson Hall - Living wings-domestic water supply vertical riser piping lifecycle replacement V of V	\$1.3M - \$1.6M
Wilson Hall-Student room furniture/case goods replacement (579 rooms)	\$1.3M - \$1.5M

Section II: Projects in Active Planning or In Process/Funding from Other Resources	
Projects Authorized by the Board of Trustees for Construction (Arranged Alphabetically)	
Akers Hall - Convert Existing (20) Student Apartments to Student Rooms (Phases 1 and 2)	\$2.7M
Akers Hall & Various Bldgs - Covid HVAC And Classroom Precautions	\$2.0M
Akers Hall Replace PCB Transformers and related equip.	\$3.0M
Anthony Hall Building Envelope Renewal	\$10.3M
Barrier-Free Accessibility Projects - Single Occupant/ADA Restrooms - High Priority Buildings	\$2.3M
Berkey Hall Replace Chiller and Condenser	\$1.4M
Bessey Hall - Cooling Equipment replacement	\$4.4M
Biochemistry Replace Elevators 1 & 2	\$2.1M
College of Nursing - Granger Lab, Simulation Space Expansion/Update	\$1.2M
Combined Heat & Power Unit and Chilled Water Plant	\$203.0M
Computer Center 2nd and 3rd Floor Renovations - Relocation of UPLA Occupants	\$3.2M
Connect Well Houses 21, 22, 23, & 24 to Power Plant	\$1.2M
Consumers Energy Lighting Upgrades - Phase 5	\$1.0M
Dairy Facility - Research and Teaching and Learning - Accreditation - New Construction	\$75.0M
Data Center - Water Cooling to Icer Racks, Room 120	\$2.8M
Farm Lane Duct bank Extension (Red Cedar to Wilson/Farm Lane)	\$3.3M
Fee Hall - Anatomy Lab Repairs	\$1.2M
Food Stores Replace Electrical Substation	\$2.8M
FRIB 4th Floor Office Tower Renovations	\$4.4M
FRIB Chip Testing Facility - Building Addition	\$17.0M
FRIB Laser Laboratory - rooms 1344 and 1344A	\$3.6M
FY25 Replace Water Main Distribution Annual Allotment	\$1.0M
FY25 Steam distribution renewal annual allotment	\$1.0M
Giltner Hall - Replace Galvanized Piping (Capital Renewal)	\$2.6M
Greenhouses - Renovation of Existing and Addition incl. new Headhouse - Research Expansion and Learning	\$35.0M
Hannah Administration - Upgrade PCB Transformers and Electrical Equipment	\$3.0M
IPF - Building Performance Services - Office Renovation	\$1.2M
IPF Welding Shop and Utility Distribution Crew Facility	\$2.0M

Replace Wells/Wellhouses (Well 20R)	\$2.0M - \$3.0M
Replace Wells/Wellhouses (Well 32)	\$2.0M - \$3.0M
Spartan Stadium Modernization	\$600.0M - \$800.0M
Spartan Stadium Public Art (Duffy Daugherty Sculpture)	\$1.0M - \$1.1M
Technology Engineering - Renovations at Wilson Hall	\$27.0M
Vet Med Center A-Wing Mechanical Improvements	\$13.5M - \$17.5M

Addressing the above projects is extremely important to the effectiveness of academic programs and to the operational efficiency of the institution. Funding these projects is consistent with the university's commitment to responsible stewardship of critical state resources. The investment ensures the capital infrastructure to carry out MSU's commitment to intellectual leadership in developing new knowledge for students and the public in measurable ways.

#### VI. Capital Outlay Planning

The capital planning priorities support programs that have strong national reputations, expanding research bases, and high enrollment demand that will sustain the university and increase its contributions to Michigan. Funding these requests provides economic development in the state, now and in the long term.

#### **Renovations and Additions**

Renovations and/or additions address extensive programmatic and maintenance improvements required by buildings previously funded by the state. The improvements are necessary to reconfigure and/or expand space to support the work of the programs housed in those facilities, to create core/shared research support facilities and modern learning spaces; and in some instances, adaptive re-use or modernization of aging buildings, including alignment with current codes and provisions for accessibility.

Major renovations include plant sciences, biomedical and biological sciences, water and energy, and the arts.

#### **New Construction**

New construction is needed to support high-priority instructional and research programs. The facilities are necessary to support current and future programmatic initiatives in the STEM disciplines, including engineering sciences, computation and data sciences and data analytics, biomedical, and health sciences education.

#### **Major Systems Replacement**

In view of the extensive facility needs it faces, MSU has drawn upon an increasing amount of internal university resources to address the most critical facility maintenance and programmatic requirements. Self-funding these capital improvements is not sustainable without negative impacts on other programs. Examples of systems in need of repair or replacement include roofing, windows, electrical, mechanical, chiller, refrigeration, steam, fire, security, and barrier-free access.

#### VII. Conclusion

Michigan State University drives exploration and innovation while empowering excellence, advancing opportunity, and expanding impact. MSU uses its facilities to attract top talent across students, faculty and staff, and routinely receives more than \$700 million in sponsored awards annually with research expenditures of \$932 million in 2024. The university and its scholars excel in a breadth and depth of areas including nuclear physics, food security, plant sciences; sustainable health sciences; material sciences, basic sciences such as chemistry, microbiology, and molecular genetics; computational sciences, and population and the environment, including food, water, and energy. MSU's programmatic investments complement student success goals to provide an inclusive, curriculum and environment with the academic, social, wellness, and financial support that enables all students to learn, thrive, persist, graduate, and succeed after graduation.

More than 90% of MSU's graduates are employed or continuing their education within nine months of graduation. Among employed graduates in 2024, 64% remained in Michigan with an additional 15% employed in states in the region.

Michigan State University creates annual statewide economic impact of \$6.8 billion and instills an entrepreneurial and high-performance mindset in its students, faculty, and staff.

MSU works collaboratively in the cities of Flint, Detroit, and Grand Rapids to provide expertise and a network of resources in education, food, water, health, and sustainability. MSU Extension's presence extends to all 83 Michigan counties, sharing resources and expertise to advance the state and its economy. Agribusiness is Michigan's second largest industry. MSU AgBioResearch and MSU Extension contribute research, educational programs, and expertise to boost economic development and growth in agriculture, natural resources, community vitality, entrepreneurship, and career preparation for young people.

MSU's strategic plan guides investment in areas of established and emerging excellence to address global challenges and to meet pressing communities' needs in Michigan, in the United States, and around the world. MSU advances opportunities and ethics to improve the human condition. Our collaborative and interdisciplinary investments support an environment that is well positioned to address the grand challenges locally and globally. By 2030, we envision a Michigan State University that has significantly expanded opportunity and advanced access, elevated its excellence in ways that attract vital talent and support, and has a vibrant, caring community.

#### **MSU Mission Statement**

The following statement was approved by the Board of Trustees on April 18, 2008

Michigan State University, a member of the Association of American Universities and one of the top 100 research universities in the world, was founded in 1855. We are an inclusive, academic community known for our traditionally strong academic disciplines and professional programs, and our liberal arts foundation. Our cross- and interdisciplinary enterprises connect the sciences, humanities, and professions in practical, sustainable, and innovative ways to address society's rapidly changing needs.

As a public, research-intensive, land-grant university, funded in part by the State of Michigan, our mission is to advance knowledge and transform lives by:

- providing outstanding undergraduate, graduate, and professional education to promising, qualified students in order to prepare them to contribute fully to society as globally engaged citizen leaders
- conducting research of the highest caliber that seeks to answer questions and create solutions in order to expand human understanding and make a positive difference, both locally and globally
- advancing outreach, engagement, and economic development activities that are innovative, research-driven, and lead to a better quality of life for individuals and communities, at home and around the world

4 Campus Frameworks Framework Vision Programmatic Framework Public Realm Framework Mobility Systems Development Capacity	54		

#### **Foreword**

I am pleased to share with you Vision 2050: An Integrated Facilities and Land Use Plan for Michigan State University, and call upon us all to envision the future etched out in placemaking.

Over the past two years, our Spartan community visualized the physical requirements of our multi-location campus in serving our people and their purpose. Vision 2050: An Integrated Facilities and Land Use Plan is predicated on the pillars of the University Strategic Plan and with every future shovel in the ground and crane in the air, our campus will be molded by the vision of today for a new generation of Spartans. On December 15, 2023, the Board of Trustees ratified these bold goals enabling our work to begin.

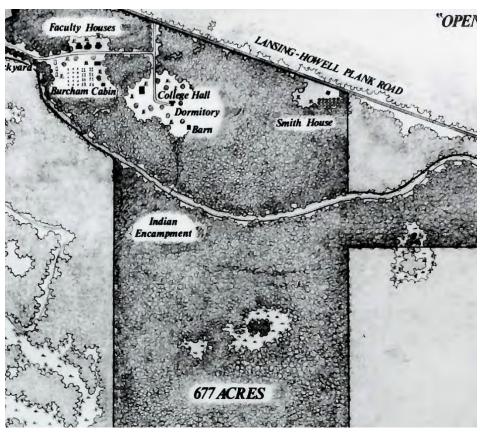

Join me in seeing excellence in the built as well as protected and unspoiled parts of our campus locations by paging through the attached plan. For this is a time when our people are redefining education, research and outreach by placemaking on a scale that will be transformative to our shared purpose.

I hope you see yourself and your work in this plan and look forward to your engagement as we take the next ambitious steps in the making of a great university.

Teresa K. Woodruff, Ph.D. Interim President **Michigan State University** 

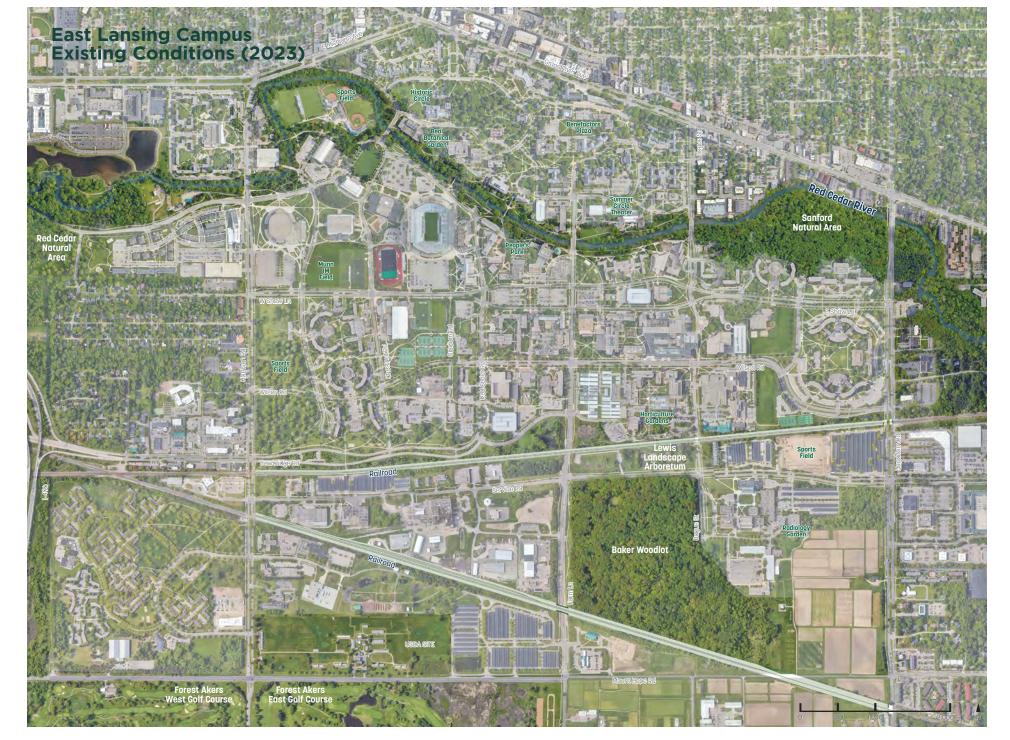

#### **Land Acknowledgment**

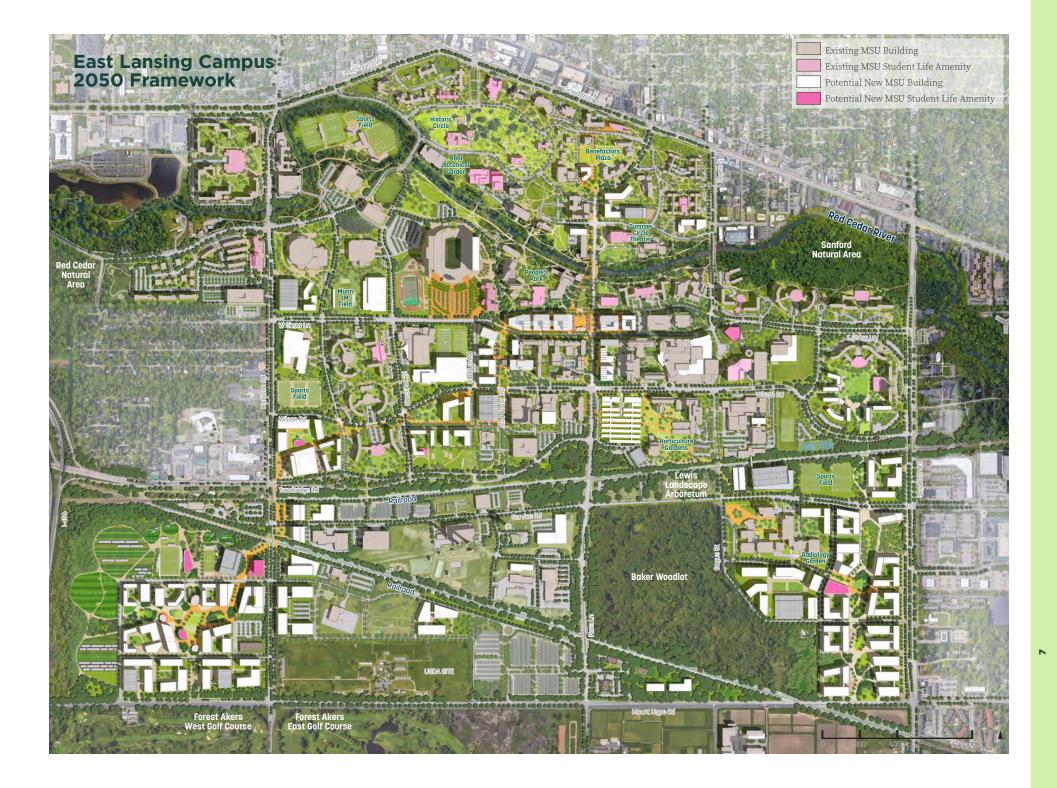

We collectively acknowledge that Michigan State University occupies the ancestral, traditional, and contemporary Lands of the Anishinaabeg - Three Fires Confederacy of Ojibwe, Odawa, and Potawatomi peoples. In particular, the University resides on Land ceded in the 1819 Treaty of Saginaw. We recognize, support, and advocate for the sovereignty of Michigan's twelve federally-recognized Indian nations, for historic Indigenous communities in Michigan, for Indigenous individuals and communities who live here now, and for those who were forcibly removed from their Homelands. By offering this Land Acknowledgement, we affirm Indigenous sovereignty and will work to hold Michigan State University more accountable to the needs of American Indian and Indigenous peoples.

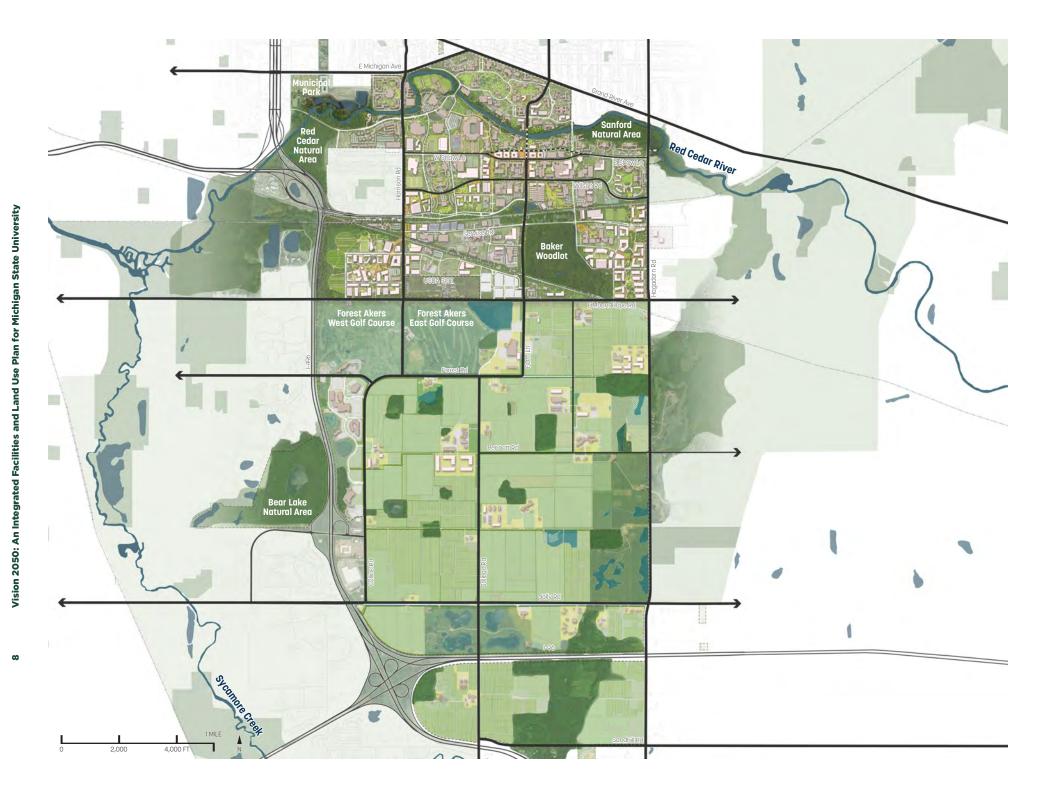

An 1857 map shows Indian Encampment areas on the site of The Agricultural College of the State of Michigan.

#### **Executive Summary**

Vision 2050: An Integrated Facilities and Land Use Plan for Michigan State University provides a framework for future development on the university's campuses and landholdings. Guided by the MSU 2030 Strategic Plan, the plan was developed over approximately 24 months beginning in early 2022. It incorporates a various range of institutional goals into a set of near- and long-term recommendations guided by two strategic documents including the MSU 2030 Strategic Plan: Empowering Excellence, Advancing Equity and Expanding Impact, and the Relationship Violence and Sexual Misconduct Strategic Plan.

The plan recommendations reflect over 80 stakeholder interviews involving over 660 participants, an interactive map-based survey with nearly 900 respondents, and multiple public forums, which provided the consultant team a detailed understanding of the university's facility needs, its strategic goals, and other contingent issues to future development.

As the consultant team formulated campus development scenarios, ideas were tested alongside university stakeholders through both in-person work sessions and virtual open houses, ensuring that the plan recommendations reflect the in-depth knowledge of the MSU community.

While flexible in nature, the plan recommendations affirm MSU's goals of academic excellence; student success; inclusive excellence; novel partnership opportunities; resilient and sustainable land use; and a mission that advances the state-wide economy. These goals embedded themselves throughout state-wide facilities and across each of the East Lansing Campus's precincts, resulting in distinct recommendations around the buildings, mobility networks, open spaces, and utility systems that will support the university's next generation of development.

Vision 2050 serves to guide changes to the built environment at MSU over time. Informed by the strategic plan, MSU 2030: Empowering Excellence, Advancing Equity and Expanding Impact, it will act as a bridge between ideas and physical implementation, strategically positioning the university to make decisions that optimize future investments across campuses while building incrementally toward a powerful, grander vision. The MSU 2030 themes serve as a basis for the seven guiding principles for Vision

Staff and Faculty Success

**Innovation** for Global Impact

Sustainable Health

Stewardship and Sustainability

Access. **Opportunity** and Excellence

#### **Empower a "Spartans United**" Mindset

Ensure that the university mission drives the physical environment, integrating strategic, physical, and resource planning.

#### **Advance Excellence** in Teaching, Learning, and Research

Spark innovative specialized and multidisciplinary teaching and learning, research, and scholarship through the development of state-of-the-art facilities, leading to new knowledge, economic and technological development, and a workforce ready to meet the needs within Michigan and across the globe.

#### Foster a More Inclusive and Welcoming **Campus Climate**

Ensure access in the physical environment, leveraging opportunities to create a more accessible and openminded campus environment and one that is representative of all students, faculty, and staff.

#### **Enhance Connectivity, Engagement, and** Institutional Identity

Strengthen connections and identity across MSU's constellation of locations to advance physical, programmatic, and virtual collaboration regardless of where students, faculty, and staff reside.

#### **Cultivate a Living-Learning Ecosystem**

Spark innovative specialized and multidisciplinary teaching and learning, research, and scholarship through the development of state-of-the-art facilities, leading to new knowledge, economic and technological development, and a workforce ready to meet the needs within Michigan and across the globe.

#### **Promote Stewardship** of Our Resources

Prioritize fiscal and land use responsibility to maximize use of MSU's resources and promote projects that support the institutional mission.

#### Commit to a Sustainable and **Resilient Future**

Take action to reduce our global carbon footprint and contribute to building more resilient and sustainable communities. We will leverage our expansive infrastructure to create experiential learning opportunities as a living laboratory.

## **Support Academic Excellence**

The university's mission is to advance knowledge and transform lives by providing outstanding undergraduate, graduate and professional education; conducting research of the highest caliber; and advancing outreach, engagement and economic activities. MSU is an inclusive academic community known for traditionally strong academic disciplines, professional programs, and liberal arts foundation. Its cross- and interdisciplinary enterprises connect the sciences, humanities, and professions in practical, sustainable, and innovative ways to address society's rapidly changing needs.

Vision 2050 builds on the university's academic success by providing compact, mixed-use academic districts, expanding opportunities for research and innovation, and preserving the campus park, agricultural lands, and natural areas for its academic mission. Improvements to the campus landscape and academic facilities bring together students, faculty, and staff to elevate core strengths while improving opportunities for interdisciplinarity.

## Red Cedar Promenade looking South towards Wilson Road

#### **Bolster Student** Success

Michigan State University has set a benchmark for student success among peer institutions through its commitment to developing well-rounded citizen learners. Its "neighborhood" model integrates touch-down spaces for student services that allow career coaches, academic advisors, and counseling staff to be embedded within the residential neighborhoods. Recent and ongoing investments in new academic buildings and student-centered facilities, such as the STEM Building and the Multicultural Center, continue to provide a more balanced spectrum of spaces for students to collaborate.

Vision 2050 leverages the success of these initiatives. It provides hubs for student collaboration within each of the campus's academic precincts through a mixture of new facilities that add density and walkability, renovation to strategic facilities, and demolition of poor quality buildings. Additionally, the plan expands on the "neighborhood" model, renewing and expanding housing capacity where necessary and continuing to embed key nodes for students to meet with faculty and support staff, providing services critical to their success.

## Foster an Inclusive Community

As the university's global reach has expanded, so has the needs of the campus community. Vision 2050 supports goals of inclusion by creating a campus that is more accessible and expands the range of spaces and amenities available. The plan protects and expands lands that have supported Indigenous culture and rituals for generations prior to the university's founding. Its landscape recommendations complement the historic, park-like setting of the historic campus with a civic realm that provides a more diverse array of open spaces.

The plan reflects the need for interior spaces that meet the university's increasingly varied needs. Within each campus precinct, indoor gathering spaces anchor significant landscapes, enhancing the sense of community and belonging. The plan also recognizes that today's population has broader needs for mental, physical, and social well-being and recommends that improvements to the built environment incorporate spaces to build community, find solace, practice faith, and attend to other physical and mental health needs.

## Promote Research and New Partnerships

Michigan State University is renowned for impactful scholarship that addresses pressing global challenges, generating global leadership across a broad range of academic disciplines.

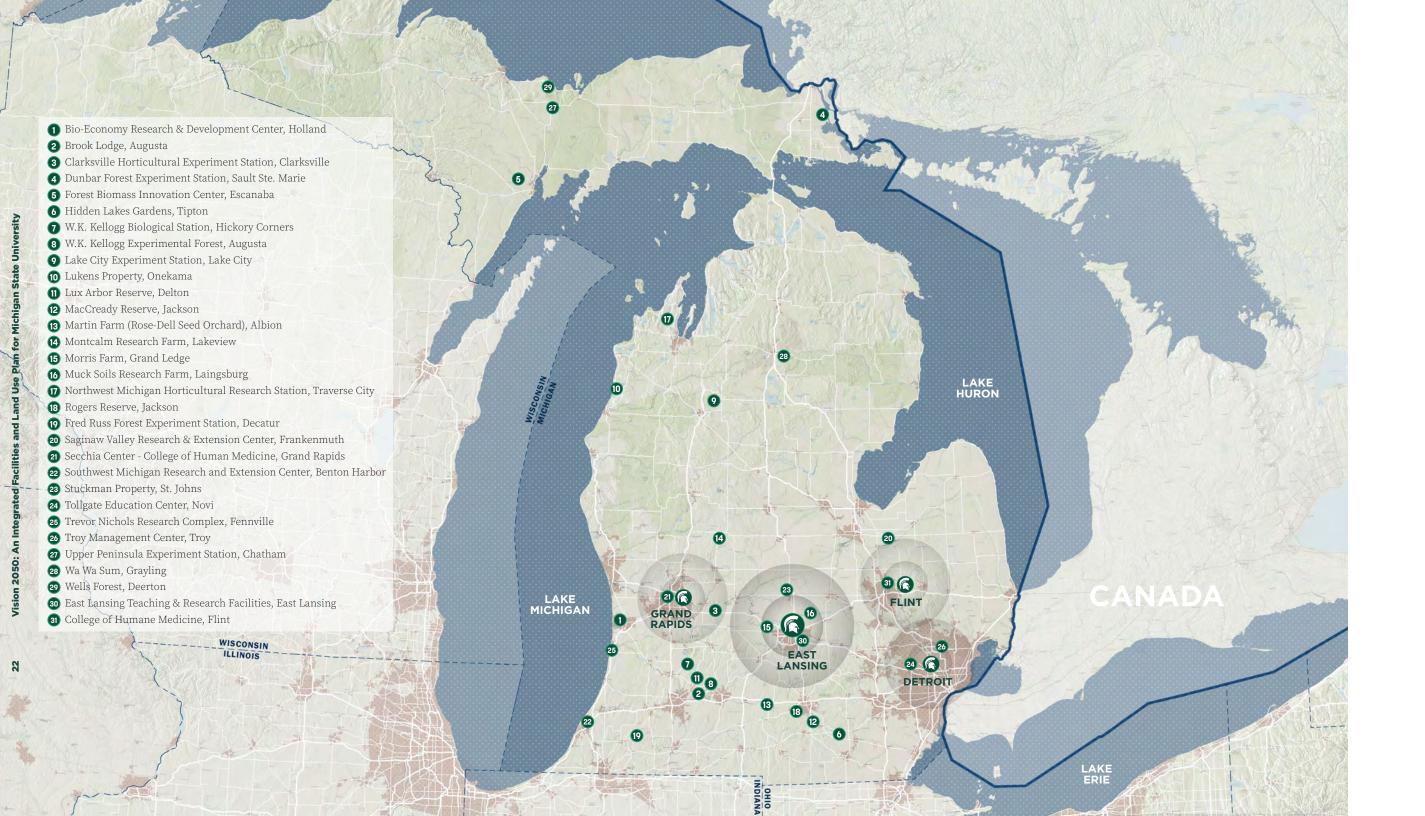

Vision 2050 recommends the preservation and, where necessary, expansion of the university's research land resources, ensuring future generations can sustain the region's food systems and ecological resources through research initiatives. The plan recommends space for potential expansion for biomedical research within Southeast Campus and potential capacity for affiliated partners to develop research facilities that translate MSU's expertise to the commercial realm.

On the former site of Spartan Village, the plan defines a long-term vision for a precinct with a diverse mix of uses, such as housing, research, and affiliated business partners, providing MSU with flexibility and capacity to meet evolving partnership needs.

#### Model Holistic Water Management Strategies

Stormwater management and resilient land-use patterns unfold at a variety of scales across the MSU campus. At the individual site, implementing water treatment, retention, and detention strategies should reflect future development conditions. The treatment of runoff, infiltration into groundwater systems, and mitigation of peak flow should all work to reduce flood risks downstream of the campus. The campus-scale lens evaluates the inter-connectivity of the watershed, evaluating topography and storm drain outfalls to mitigate flooding and overwhelming the system. Finally, the river-scale lens considers the floodplain interactions with the campus facilities, looking to restore floodplain buffer to reduce the impact of fluctuations in flow that come with changing seasons and add programmable outdoor space that enhances teaching and learning.

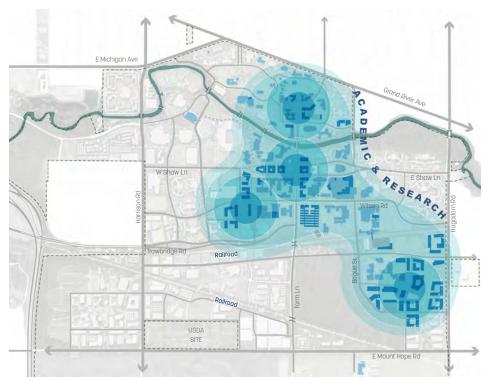

## State-wide Integration

Michigan State's presence in regional hubs like Detroit, Flint, and Grand Rapids is essential to expanding its research, education, and outreach missions. Additionally, MSU maintains Extensions and AgBio Research stations throughout all 83 counties in the state. Collectively, these distributed hubs allow MSU to connect its research and academic initiatives with individuals and communities across the state.

Vision 2050 includes findings from meetings with representatives from the university's academic and research units, identifying existing and potential programmatic needs across its statewide locations. It provides flexible recommendations for these facilities to ensure the university continues to connect its world-class research with the citizens of Michigan.

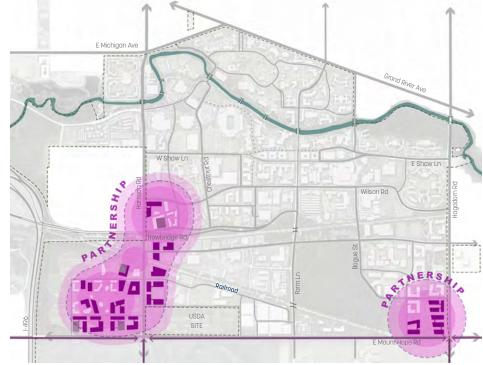

23

## LAND USE FRAMEWORKS

#### **Academic Crescent**

The plan intentionally concentrates academic and research facilities along a crescent that connects the former Spartan Village, the intersection of Farm and Shaw, and Southeast Campus. This focused development pattern maximizes programmatic synergies, utilizes the university's land to its highest and best potential, provides efficient accessibility to these resources, and minimizes costly extensions to supporting infrastructure. Proximity for class change and research collaboration is critical.

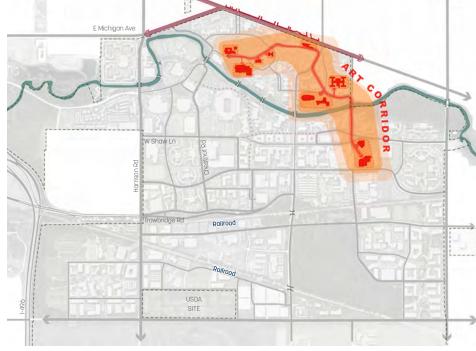

#### **Research Gateways**

In addition to university-sponsored research and academic growth, the plan anticipates sites for partnerships that advance its teaching, research, and outreach mission. These support new gateways to campus at its southeast, along Hagadorn Road, and its southwest, along Harrison Road.

#### **Campus Life Nodes**

The plan provides a flexible approach to the potential expansion or renewal of existing student housing and student life amenities. It concentrates improvements within or adjacent to MSU's existing residential neighborhoods, ensuring efficient access to academic resources and amenities that support the development of the whole student. Given the success of the residential neighborhoods, this same intention to support the whole student should be considered within academic districts to promote student health and wellbeing throughout the day.

#### **Arts and Culture Corridor**

Creative inquiry and the arts are fundamental to advancing knowledge and developing a vibrant campus community. The plan identifies a corridor that connects the Wharton Center for the Performing Arts north to Kresge Art Center, the Auditorium, and Broad Art Museum. This spine not only unifies the university's multiple facilities for visual and performing arts but also tie it to the vibrant retail and dining district along Grand River Avenue, thereby stitching the university's artistic mission with East Lansing's cultural context.

#### **Purpose**

Vision 2050 provides a flexible framework to guide future decisions regarding land use, buildings, facilities, and mobility. It builds upon the physical framework established in the 2017 Campus Land Use Plan Update, incorporating recent efforts including precinct-level planning studies, unit and thematic planning and programming studies, feasibility studies, and anticipated capital projects. The plan identifies drivers for MSU's academic, research, and outreach mission, recommending improvements to the East Lansing campus and MSU's other state-wides presences to advance these drivers.

#### **Process**

The planning process unfolded over approximately 24 months, from project kickoff in January 2022 to Board of Trustees approval in December 2023, and was guided by a three-phase structure: Analysis and Listening, Preliminary Recommendations, and Final Recommendations and Documentation. A clear management hierarchy ensured regular engagement with university stakeholders at appropriate intervals.

A core team of representatives from Infrastructure Planning and Facilities (IPF) and Institutional Space Planning and Management (ISPM) met weekly with the consultant team to coordinate the planning process and ensure regular feedback on the advancement and messaging of the plan's findings. The consultant team met with a Project Management Team approximately once per month; this team provided strategic guidance on the master plan's recommendations. Additionally, the consultant team provided periodic updates to both the Executive Committee for Buildings, Facilities, and Space (ECBFS) and Campus Infrastructure Planning Work Group (CIPWG). Both groups provided input on the plan's development and recommendations.

In addition to these recurring meetings, the consultant team conducted over 80 stakeholder interviews that included over 660 participants with individual representatives or small groups to identify programmatic and facility needs. Additionally, technical working groups around key themes assisted in developing specific campus systems. Finally, throughout the planning process, the planning team provided opportunities for the public to give feedback on the findings and recommendations of Vision 2050.

#### Phase 1: Analysis & Listening

Phase 1 of Vision 2050 began with the consultant team developing a comprehensive understanding of MSU's East Lansing campus and other statewide locations. The team assimilated and analyzed a wealth of data provided by MSU to understand the institution's history and trajectory, its programs, and the buildings and landscapes that serve it. A series of over 80 stakeholder interviews that included over 660 participants and a community-wide CoMap survey provided a nuanced, qualitative overlay of the opportunities and challenges the plan would need to address. In combination, these resulted in a summative existing conditions analysis.

## Phase 2: Preliminary Recommendations

The second phase of work tested two options for near-term (10-year) and long-term (30-year) development on the East Lansing campus. Each framework alternative examined the impacts on land use, parking and mobility, open space, and other functions at the scale of the 5,200-acre East Lansing campus and within each precinct. In consultation with the MSU project management and core teams, the team developed a preferred framework alternative that combined elements from the two framework scenarios. At the end of Phase 2, the preferred alternative was presented to the campus community through in-person and virtual open houses to provide feedback and ensure consensus for the final recommendations.

#### Phase 3: Final Recommendations & Documentation

Based on feedback on the preferred alternative, the consultant team advanced a cohesive set of campus- and precinct-level recommendations. Driven by the 5-year Capital Request Planning and Capital Outlay Request, the preferred alternative included an implementation strategy to flexibly anticipate the range of funding resources available to the university. The final recommendations delineate major and minor open spaces, provide schematic massings for campus buildings, identify strategies for parking and circulation, and recommend potential property acquisitions. The consultant team presented final recommendations to MSU leadership and the broader university community, and the Board of Trustees adopted Vision 2050 in December 2023.

#### **Engagement**

Building consensus around the findings and recommendations of any planning effort is critical to successful implementation. As Vision 2050 unfolded, the consultant team relied on a mix of in-person and virtual strategies to ensure a broad set of constituencies informed the planning process.

#### Listening Sessions

The consultant team conducted over 80 listening sessions including over 660 participants sessions throughout the planning process. These included individual interviews with members of university leadership; conversations with deans, vice presidents, and other representatives from each academic and administrative unit; and thematic focus groups that included a spectrum of faculty, students, staff, and community members.

#### Open Houses

Within each phase of work, open houses provided opportunities for faculty, students, staff, alums, and community members to provide feedback. During the first phase of work, open houses were conducted virtually with both synchronous and asynchronous options available. As the process moved into preliminary and final recommendations, the consultant team leveraged a mixture of in-person and virtual open houses. In coordination with the MSU core team, the consultant team located in-person open houses in strategic locations over multiple days to engage as broad a range of constituents as possible.

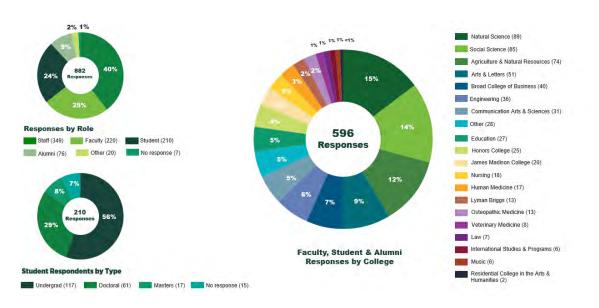

#### **Virtual** Input

As the planning process unfolded, the team provided a number of online formats for input to the planning process. As part of the project initiation, a digital survey allowed a broad base of constituents to identify opportunities and challenges within the university's campuses and facilities. In addition to in-person town hall meetings, the team conducted virtual work sessions to solicit feedback from as broad a base of constituents as possible.

#### **Leadership Engagement**

Throughout the planning process, the consultant team presented findings to university leadership including the Board of Trustees, ensuring recommendations aligned with strategic priorities. These meetings took various forms, including listening sessions to understand board priorities, focused meetings to present analysis and preliminary recommendations, and a campus tour where the trustees affirmed the plan's recommendations.

#### MICHIGAN STATE UNIVERSITY Enrollment Report September 19, 2025

This year's total enrollment for Fall 2025 is 51,838 students. This fall we welcomed 10,720 new undergraduates (entering class and transfers). When added to our returning students, for a total of 41,415, it is our largest number of undergraduates to date. This includes 11,169 students of color. At 28.3% of the domestic class, it is also the most diverse undergraduate body to date.

Total enrollment includes international students from 139 countries, domestic students from all 50 states, and Michigan students from all 83 counties. Students of color make up 28.8% of the domestic class, making it MSU's most diverse student body.

#### New Undergraduates

- MSU received 64,492 applications for the entering class, exceeding last year's 62,138 by 3.8 percent.
- First time Honors College enrollment is 609 students, comprising 6.5 percent of the entering class.
- Domestic students from outside of Michigan total 1,765 and make up 18.9 percent of the entering class.
- New transfers total 1,365 students.
- Total entering class and new transfer enrollment, inclusive of summer admits, is 10,720 students, 78.6 percent of which are from Michigan.

#### <u>Undergraduate and Graduate Students</u>

- Total undergraduate enrollment is 41,415 students, up from 41,234 last year.
- Females make up 51.5 percent of the total undergraduate enrollment.
- There are 1,754 new degree-seeking graduate students at the master's and doctoral levels.
- New graduate professional enrollment totals 743 students.
- Total graduate enrollment, including graduate professional students, is 10,423 students.

#### **University**

- Total university enrollment for students of color is 13,707 students and accounts for 28.8 percent of the domestic student total. This is MSU's most diverse student body to date.
- The enrollment mix between undergraduate, graduate, and graduate professional students is 79.9 percent, 14.5 percent, and 5.6 percent, respectively.

The attachment provides detailed enrollment statistics.

Type of Project:	□ Ren	$\square$ Renovation $\square$ Addition $\boxtimes$ New Construction									
Program Focus of Occupants: Undergraduate teaching and learning, and research focuse the convergence of digital and physical technologies.											
Approximate Square F	ootage:	Approx	Approximately 270,000 gross square feet								
Total Estimated Cost:		\$340 r	\$340 million								
Estimated Duration of Project: Estimated construction duration 24 to 30 months											
Is the Five-Year Plan posted on the institution's public internet site? $\square$ Yes $\square$ No											
Is the requested proje	Is the requested project the top priority in the Five-Year Capital Outlay Plan? $\square$ Yes $\square$ No										

#### **Project Purpose**

The Engineering and Digital Innovation Center (EDIC) is critical to MSU's vision for meeting the grand challenges in the State of Michigan and beyond. This vision simply cannot be met with a business-as-usual approach. MSU's strategy is to go bold to accomplish this vision by creating its first multi-college, interdisciplinary ecosystem of teaching and learning and research to solve the issues facing the world today and educating the difference makers of tomorrow. This continuum of research and learning activity under one roof centered at the heart of the East Lansing campus will provide an unprecedented ability for the State of Michigan to make its mark on the new frontiers of the digital future.

The center will exemplify a new way of thinking about interdisciplinary space, where using **Digital Innovation** as the umbrella creates the common thread through disciplines conventionally viewed as unconnected. For **students**, this creates possibilities where **their individual missions**, **not majors**, become the primary drivers for career possibilities. For **researchers**, it creates a space where disciplinary knowledge converges with out-of-the-box thinking, sparking novel solutions at the intersection of expertise and imagination. The center will provide the catalyst for **value-added synergies** on which students and researchers can capitalize, allowing them to reach **new heights in their careers** and make **significant impacts on the state and world**.

Through an **interdisciplinary initiative** made possible by the EDIC, these six colleges initially lead the effort: Engineering, Natural Science, Broad College of Business, Arts and Letters, Communication Arts and Sciences, and Social Science. This interdisciplinary approach is unique and brings **substantial value to the State of Michigan**. The collective education and research focus of these colleges reflect the stated priorities of the State of Michigan's workforce and economic development strategic plan, growing Michigan's economy, attracting and retaining talent and business, and investing in research and development for future technologies. By focusing on the State of Michigan's economic priorities, the EDIC will produce **long-lasting positive impacts** 

**on the state's economy** in high-demand, high-growth industries, such as technology, healthcare, and manufacturing.

#### Scope of the Project

EDIC, at approximately 270,000 gross square feet, will support the emergence of a strong and transformative ecosystem focused on the convergence of digital and physical technologies and will become the epicenter of academic and research excellence. Below is a description of the high-impact research, teaching and learning, collaborative and administrative spaces critical to MSU's vision for maximum impact on the Michigan economy.

#### Research Space

The research labs will support interdisciplinary research in high-demand, industry-driven fields, such as advanced manufacturing, materials science, microelectronics, and artificial intelligence.

- Materials Science and Manufacturing (MSM) research labs and office space for 40 researchers and their teams. These labs will be grouped to foster collaboration and innovation across fields with highly varied and cost-intensive lab space requirements.
  - <u>Fume-hood intensive labs</u>: For chemical-heavy research in **Materials Science Engineering** and **semiconductor-related Chemistry** research.
  - <u>Field-sensitive labs</u>: To meet strict vibration and air filtration requirements for **Quantum Optics** and **Space Electronics** research.
  - <u>High-bay labs</u>: For fabrication and testing of **large-scale devices or apparatus**.
  - <u>Controlled conditions labs</u>: To meet extremely strict vibration and air filtration requirements for **Ultrafast Science / Quantum Computing** research.
- Materials Science Core Facilities
  - <u>Composite Materials & Structures Center</u>: A continuum of lab space from prep to analysis to manufacturing.
  - <u>Diamond Deposition Space</u>: A clean environment (ISO 6) for Ultrafast Science applications.
- **Digital Innovation and Computational Science research labs** for 25 researchers and their teams studying in fields such as artificial intelligence, machine learning, and data science.

#### Teaching and Learning Space

EDIC is designed to be a flexible, active-learning environment with a mix of classrooms and specialized learning spaces to support instruction in topics across the **Digital Futures** spectrum. MSU intentionally determined the learning space types and capacities through careful data analysis and these learning spaces will serve nearly 6,700 students weekly for scheduled courses alone.

#### Active Learning

- <u>250-seat Lecture Hall</u>: Used for a **broad range of courses**, maximizing the number of students interacting within an environment designed around innovative thinking.
- <u>150-seat Classroom</u>: Following the success of a **similar learning space in the state-supported STEM Teaching and Learning Facility**, MSU will replicate the model here; will double as an **Esports** competition stage and spectator area and will be front-and-center for the purpose of maximizing the student draw to EDIC.
- <u>Three 90-seat Technology-rich Classrooms</u>: Designed using the latest iteration of MSU's Rooms for Engaged and Active Learning (REAL Room) model, will deliver the

**critical growth space** needed to accommodate the increasing student demand for **Computer Science courses**.

• <u>Two 30-seat Classrooms</u>: Purpose-designed to meet the pedagogical needs of the College of Arts and Letters' interactive **Experience Architecture** instruction.

#### • Specialized Instruction

- <u>50-seat Cybersecurity and Digital Investigations Teaching Laboratory</u>: Supports College of Social Science, School of Criminal Justice instruction in **digital forensics evidence analysis**, part of a top ten-ranked MSU program.
- 50-seat Game Design Teaching Laboratory: Supports College of Communication Arts and Sciences hands-on, interdisciplinary learning integrating technology, creativity, and collaboration for real-world gaming solutions, impacting society well beyond the gaming industry.
- 48-seat App Ecosystem Design Lab: Supports interdisciplinary instruction focused on developing innovative, community-centered digital solutions within mobile and connected software environments.
- The Entrepreneurship and Innovation Hub (E&I): A dynamic, interdisciplinary space
  that will provide all the resources for students to take their ideas from concept to
  market. The E&I Hub will support idea generation, prototyping, networking, and
  business planning.
- The Burgess Institute for Entrepreneurship and Innovation: This well-established campus resource is built on leveraging a network of dedicated experts to empower students to discover and find tomorrow's solutions. The institute will relocate from off-campus leased space, thus improving student access and allowing entrepreneurship and innovation to be integrated into student learning.
- **Prototyping Studio**: For fast-paced conceptualizing and iterating, this low-tech workspace (e.g. for creating quick mock-ups using paper and ink or basic software and a printer) will be an early stop for a student developing an idea.
- **Mixed Reality Laboratory**: For detailed idea development, this experientially immersive space will be critical to creating virtual experiences, pioneering new hardware solutions, and studying the impacts of **Extended Reality** (XR).
- White Box Theater: For innovations requiring accurate usability testing, this space can mimic any real-world environment and facilitate meticulous experimental evaluations requiring the ability to isolate variables.

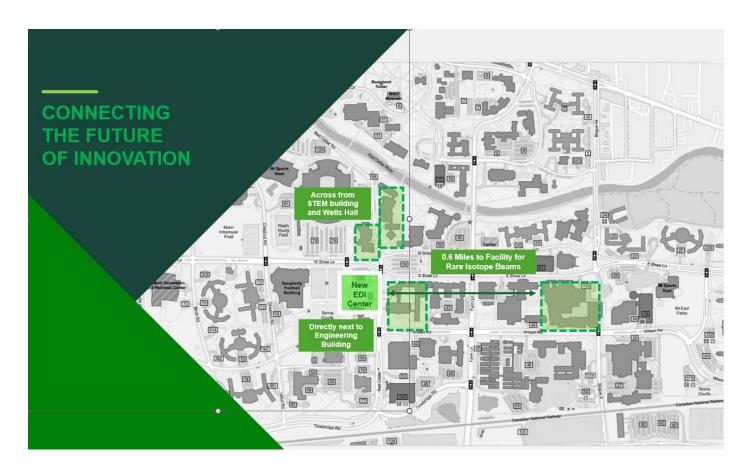

#### Collaborative and Administrative Spaces

Collaboration will be infused into every activity occurring within EDIC. The heart of the EDIC will be the entry commons area designed to set a tone of welcomeness and inspiration for all who enter and around which all other activities revolve. Staff offices will be positioned for easy access by students, and students will experience several space options for studying and collaborating.

- Open Study/Collaboration Space: MSU experiences an insatiable demand from students for space to use between classes and for group study. Open seating will be located throughout EDIC, building on the successful concept applied in the STEM Teaching and Learning Facility.
- Collaboration Rooms: Bookable enclosed spaces will be located throughout EDIC and available for teams of students and researchers to use.
- **Program Offices**: At the heart of the EDIC's mission is access to the interdisciplinary resources required to participate in innovation; researchers, experts, and the relocated Entrepreneurship and Innovation Hub.

#### Location and Future Planning

The Center will be located in MSU's central academic district proximate to the Engineering Building, the STEM Teaching and Learning Facility and Wells Hall. This location is along a major path of travel through which thousands travel each day, creating opportunities for engagement and serendipitous encounters. This strategic placement will enhance collaboration between academic units, and across students, faculty, staff and visitors and leverage existing infrastructure.

#### **Program Focus of Occupants**

EDIC will allow MSU to take a bold, comprehensive, and long-range approach to addressing the digital future. There will be an intentionally created ecosystem built around different disciplines and across a continuum of teaching, learning and research initiatives: researchers tackling today's issues and Michigan's future workforce preparing to become our problem-solvers of tomorrow.

#### Student Impact

EDIC, as an interdisciplinary hub for digital learning, will include these thematic areas:

- Materials Science and Manufacturing
- Computational and Data Science
- Artificial Intelligence
- Entrepreneurship and Innovation

- Cybersecurity
- User Experience
- Esports and Game Design

The addition of EDIC strengthens MSU's ability to attract and retain students **actively seeking** experiences and opportunities in digital innovation and entrepreneurship, such as those interested in:

- Developing their entrepreneurial skills Burgess Institute and Hub
- Building careers in the digital future space specialized learning spaces purpose built for program focus (computer science, game design, cybersecurity)
- Engaging with a digitally-focused community Esports, club activities

MSU also plans to draw students who may not be aware of these opportunities by creating welcoming commons areas, open and bookable study and collaboration spaces. University classrooms, accommodating **nearly 6,700 students weekly**, will intentionally hold a broad range of courses outside of disciplines considered digitally focused. The goal is to reach every student on campus and invite them to consider the vast array of career opportunities available in digitally innovative fields and how those opportunities interact with the major each has chosen. EDIC will provide the right landscape and community to prepare students with a multifaceted skillset for resilience in tomorrow's job market.

#### Researcher Impact

Focus areas will include:

- Materials Science and Advanced Manufacturing
- Ultrafast Science and Quantum Computing
- Computer Science and Data Science
- Artificial Intelligence and Machine Learning
- Game Design and User Experience
- Cybersecurity

Solutions in Materials Science & Manufacturing and Digital Innovation research require interdisciplinary teams working closely together. Where typically, researchers' space assignments fall within their specific department's portfolio, EDIC research space will be designed using a thematic neighborhood model. Each neighborhood will provide a variety of space types, allowing researchers from different disciplines to work in close proximity to each other. This model will allow researchers to form effective and efficient interdisciplinary teams, generate ideas with high funding potential, and, ultimately, arrive at high-impact interdisciplinary solutions critical to solving today's grand challenges and providing real and lasting impact to Michigan's economic future. MSU has successfully employed this thematic model across the research enterprise for over 10years.

#### MSU's Successful Partnership with the State of Michigan

MSU is resubmitting the EDIC for consideration for capital outlay funding for SFY2027, after previous submissions in SFY2026, SFY2025 and SFY2024. MSU's Board of Trustees authorized planning for the center in June 2022. The SFY 2027 estimate is \$340 million, following the completion of schematic design. The planning process has further evidenced the critical nature of the project as a key piece in fast-tracking innovation, research, and growing an educated workforce. MSU acknowledges and sincerely appreciates the initial \$30 million appropriation for this project through the State Fiscal Year 2024 Higher Education appropriation bill. MSU has a history of

successful partnership with the state of Michigan:

- Facility for Rare Isotope Beams (2022)
  - SoM Allocation: \$94.5M (2014) to bond and service the community cost share
  - Impact: The FRIB, a Department of Energy User facility advancing nuclear physics and providing research opportunities for scientists and students from around the globe, is projected to create hundreds of jobs in mid-Michigan while bringing in more than \$1 billion of economic activity to Michigan through 2030. Home page | Facility for Rare Isotope Beams (msu.edu)
- STEM Teaching and Learning Facility (2021)
  - **SoM Allocation:** \$30M (2017)
  - Impact: 300 scheduled course sections primarily in STEM gateway courses, reaching 10,0000 undergraduate students weekly; positively impacting student persistence to meet demand for STEM related careers. Host courses, meetings, and events reaching every MSU college and the broader community. Mass timber used in construction sparked the establishment of Mass Timber at MSU program and collaborations with Michigan's Department of Natural Resources as well as external research opportunities and state economic development. Mass Timber (msu.edu)
- BioEngineering Facility (2015)
  - **SoM Allocation:** \$30M (2012)
  - Impact: Supporting 40 faculty and their teams working at the intersection of engineering, human medicine, and natural science. The research in the building contributes significantly to MSU's overall research growth. <u>IQ - The Institute for</u> Quantitative Health Science & Engineering

Please provide detailed, yet appropriately concise responses to the following questions that will enhance our understanding of the requested project:

1. How does the project support Michigan's talent enhancement, job creation and economic growth Initiatives on a local, regional and/or statewide basis?

One out of every five students enrolled at a public 4-year college in Michigan attends MSU. MSU's impact on the Michigan workforce is significant as it educates more of Michigan's undergraduates than any other state university. Further, MSU's impact on the Michigan economy continues to grow as evidenced by its upward trend in enrollment with Fall 2025 representing the largest undergraduate class to date at 41,415. In addition, 64% of MSU graduates remain in Michigan after graduation, making them a substantial driver of the Michigan economy.

MSU takes its responsibility to the state of Michigan's economy seriously and is constantly seeking to improve its delivery of **high-quality education to prepare practice-ready talent** for careers today and to be resilient and adaptable to meet the challenges of tomorrow. EDIC is a critical investment in Michigan's current and future workforce because it will **address statewide needs for innovation and entrepreneurship** in high-growth industries like automotive, AI, and digital technology. It will also strengthen MSU's position at the forefront of meeting Michigan's evolving economic needs and progressing the goals of **Michigan's Statewide Workforce Plan**.

#### Positioning Michigan for Success

- EDIC focus areas—engineering, computational and data science, entrepreneurship and innovation—represent fields of expertise for over half of the 50 jobs in the "Michigan's 50 Hot Job Outlook through 2032" report.
- The Bureau of Labor Statistics forecasts 317,700 new jobs in computer science annually through 2034. MSU students and families are clearly aware of these career opportunities as reflected by the demand for computer science degrees over the past five years. MSU is rising to the challenge but is space and resource-limited in fully meeting the demand. As such, EDIC will provide the much-needed instructional space to deliver on both the student-driven and economic demand for computer science courses.
- Currently, MSU has a 91.5% job placement rate for engineering graduates with 59% remaining in Michigan. EDIC will provide enough growth space to support a nearly 15% increase in engineering graduates over the next five years, filling critical positions in Michigan's technology and manufacturing industries.
- High-demand industries built around engineering and technology require innovative design thinkers from other fields as well. As an example, the automotive industry has studied the ethical considerations of connected vehicles using game design software. A game design graduate is integral to a well-equipped team in this example. EDIC will create the interdisciplinary ecosystem necessary so students in fields such as digital storytelling, user experience, game design are empowered with the skills and confidence to build careers in Michigan's high-demand industries, creating career paths to the full suite of jobs needed to support industry growth.
- EDIC's Entrepreneurship and Innovation Hub will help students take their ideas from spark to market, strengthening the pipeline for contributing to the state of Michigan's initiatives establishing and investing in scalable startups, launching new Michiganbased companies, and helping the state of Michigan achieve its goal of creating thousands of new jobs.

#### Industry Alignment to Drive Innovation

- EDIC will produce graduates equipped to meet Michigan's workforce needs in fields like
  materials science, semiconductor research, and additive manufacturing, enabling
  the state to attract and retain transformational investments in clean energy,
  semiconductors, and mobility industries and will illustrate that the talent and
  infrastructure required in these sectors exists in the state of Michigan.
- EDIC will provide an interdisciplinary environment critical to equipping graduates with
  the ability to adapt to the rapidly evolving nature of many growth industries. For example,
  Michigan's automotive industry is actively seeking graduates trained in emerging fields
  such as Al integration and data analytics, on which the EDIC will uniquely allow MSU
  to deliver.
- EDIC will support strong partnerships with leading Michigan-based tech and manufacturing companies, ensuring graduates are well-prepared for the specific needs of the state's industries. Collaborative programs with these partners will enhance job placement rates and create clear pathways for students to build their careers in Michigan.

EDIC will generate **long-term economic benefits for Michigan**. It will strengthen MSU's ability to produce highly skilled graduates accustomed to working in interdisciplinary environments and **bolstering the state's position to achieve its "Sixty by 30" goal**. These graduates will be **positioned to lead Michigan's priority industries**, such as materials science, automotive,

computational and data science, and cybersecurity. On a more holistic level, however, EDIC's environment will **support a systems-based way of approaching problems**, which will, in turn, produce thinkers who are resilient and can adapt to what is sure to be a **rapidly changing career landscape** over the course of their lives.

### 2. How does the project enhance the core academic and/or research mission of the institution?

Central to Michigan State University's mission are the tenets of 1) **providing outstanding educational opportunities** to prepare students to contribute fully to society and 2) **conducting research of the highest caliber** to make a positive difference, both locally and globally. EDIC will play a crucial role in advancing MSU's mission by providing the space necessary to teach, learn, and conduct research of the highest caliber. EDIC will create a unique environment by **co-locating research and teaching and learning,** thereby generating opportunities for a broad cross-section of MSU's undergraduate population. As a foundation for initiatives initially led by six colleges, EDIC will enhance MSU's commitment to interdisciplinary collaboration, providing rich educational experiences and accessibility to topics in engineering, social sciences, communications, technology, arts and humanities, and entrepreneurship.

EDIC enhances the **teaching and learning** and the **research** pillars of MSU's mission in these ways:

#### **Teaching and Learning**

Provide capacity for growth in enrollment

- EDIC will provide growth space critical to supporting MSU's decade-long pattern of growth. In Fall 2025, MSU welcomed its second-largest ever enrollment of 51,838 students, including the largest number of undergraduates to date – 41,415.
- The College of Engineering's enrollment has grown 17% over the last decade.
   Enrollment continues to be strong for computational science courses and digital literacy disciplines, and in graduate-related programs that will be offered in the EDIC.
- EDIC will provide much-needed classroom space, including a 250-seat lecture hall, a
  150-seat classroom, and 30-, 50-, and 90-seat active learning classrooms and classlabs.
  An analysis of current classroom utilization, coupled with the known demand for modern
  teaching environments aligning with best practices in teaching and learning, guided
  the decisions to include these instructional spaces. Additionally, MSU determined that
  renovations alone are not sufficient to address capacity, functional alignment, and
  creation of a teaching and learning ecosystem.

#### Bring disciplines together for transformative and innovative programming

- EDIC will capitalize on established collaborations between the colleges of Business, Engineering, and Natural Science on large projects centered around data science, machine learning, and quantitative methods.
- State-of-the-art instructional space will be provided for even wider-ranging collaborations with the colleges of Arts and Letters, Communication Arts and Sciences, and Social Science. This ambitious and purpose-built center for interdisciplinary learning will provide students with opportunities to build strong, critical skills for highdemand fields.

 Intentionally conceived as a center reaching beyond the walls of the structure, EDIC will be open to students and disciplines beyond the initial six colleges. Spaces within the building, such as classrooms, commons, and collaborative areas will be welcoming to the broader campus community.

#### Research

Alignment with MSU's 2030 Strategic Plan Goal to Grow Research

MSU is on track to reach its Strategic Plan goal of \$1 billion in research expenditures by 2030. In alignment with that goal and MSU's decade-long trend of research growth, EDIC begins to provide the space necessary to foster interdisciplinary collaboration for the innovative research needed to create solutions and make a positive difference, as called out in MSU's mission statement.

- MSU continues to attract new faculty and increase research productivity that has culminated in research expenditures increasing approximately 60% over the last decade.
- The College of Engineering alone has grown its faculty and increased research expenditures 57% over the last decade to \$71 million in 2024.

EDIC will align modern building infrastructure and space functionality with the industry needs of today and well into the future, becoming MSU's center for excellence in advanced manufacturing, materials science, artificial intelligence and computational research and quantum computing. The center will provide:

- Modern, flexible and modular research environments that can evolve to meet future research and allow for collaborative shifts.
- The space to co-locate interdisciplinary faculty engaged in common research themes, creating opportunities for spontaneous collaboration, sharing of ideas, and resources, thereby integrating research development at the basic, applied and production levels.
- 3. Describe how the project will address, incorporate, or enhance the efforts, policies, or goals to grow and expand opportunities for enrollment for the academic programs within the scope of the project or as a component of your institution and campus at large?

#### **Expanding Opportunities**

The EDIC is, at its core, an investment in expanding opportunity for all students at Michigan State University. It is designed to create new academic pathways and moments of inspiration, especially for students who may never have imagined themselves working in emerging fields such as cybersecurity, additive manufacturing, digital storytelling, or artificial intelligence. By opening the doors to these high-impact disciplines and placing them at the center of the student experience, EDIC ensures that every student has the chance to discover something transformative, placing the focus on ensuring students access their individual interests and missions, rather than isolating student interests within their majors.

#### A Campus-Wide Innovation Ecosystem

This is not a facility that serves one college or one department. The EDIC will house programming from these six colleges, Engineering, Natural Science, Social Science, Business, Arts & Letters, and Communication Arts & Sciences, and likely beyond, making it one of **the** 

most interdisciplinary and accessible buildings on campus. In doing so, it helps dismantle silos and encourages students from all majors and backgrounds to explore new interests, build broad skillsets, and pursue careers they may never have previously considered. Whether a student enters the building for a class, an event, or simply out of curiosity, the EDIC will provide opportunities for them to encounter the high-demand fields shaping the future of Michigan's economy.

#### **Creating New Pathways to Enrollment**

The EDIC is designed to act as **an academic on-ramp**. It is a place where students can encounter unfamiliar fields in a **low-barrier**, **high-inspiration environment**. By giving all students a window into Michigan's most opportunity-rich disciplines, **EDIC encourages exploration**, fostering enrollment growth in these disciplines.

EDIC aspires to create a welcoming environment for MSU students to learn, study, and collaborate by **leveraging and strengthening established initiatives** occurring at both college and university levels. Bringing the 6+ colleges together under one roof will provide opportunities to scale these and thus magnify their impact. Three examples are:

- College of Engineering: established efforts investing in K-12 outreach (Women in Engineering K-12 programs and camps) and first-generation student initiatives (Student Success Coaching).
- College of Arts and Letters: Excel Network, supporting a holistic approach to charting successful paths to meaningful careers, demystifies the vast suite of career possibilities by providing access to career education, advising, and alumni networking.
- Burgess Institute: Through the belief that community is the cornerstone of successful entrepreneurship, the Burgess Institute partners with student-run organizations. The MSU Entrepreneurship Association focuses on building a strong membership and connecting with established entrepreneurs.

#### Helping Student Imagine their Future while Supporting Michigan's Talent Pipeline

MSU recognizes that you never know how the next great engineer, AI innovator, immersive experience designer, cybersecurity analyst, or digital storyteller shaping Michigan's future economy will be discovered. That's why the EDIC is **intentionally designed to showcase the university's cutting-edge programs**. By providing students from every corner of campus with access to innovation-focused programs, we increase the odds that **talent is unlocked**, **potential is recognized**, and new pathways are forged.

This approach aligns directly with MSU's 2030 Strategic Plan, which establishes access, opportunity, and excellence as institutional goals. One of the plan's core strategies is to "recruit, retain, nurture and graduate students, reducing barriers and promoting success for all." The EDIC is a physical embodiment of that goal: it is not just a building, but a deliberate invitation into Michigan's innovation economy.

#### 4. Is the requested project focused on a single, stand-alone facility? If no, please explain.

Yes, the requested project is focused on a single, stand-alone facility of approximately 270,000 gross square feet to create an interdisciplinary hub for digital futures, spanning teaching and learning and research.

### 5. How does the project support investment in or adaptive re-purposing of existing facilities and infrastructure?

While the Engineering and Digital Innovation Center represents new construction, it plays a critical role in strategically repurposing existing facilities and infrastructure. Through the relocation of functions from older buildings, this project will free up space, allowing it to be reallocated, improving function and infrastructure alignment, so MSU can maximize its existing infrastructure. The site selection leverages access to proximate utility systems and connections.

- Strategic repurposing of vacated space to support new research needs: As programs relocate to EDIC, MSU will repurpose vacated spaces to better align with current academic and research demands. Existing spaces, unable to support hood-intensive experimental research, will be renovated to accommodate growing demands for less infrastructure-intensive research in science, technology, engineering, and mathematics (STEM) fields, maximizing the potential of these spaces.
- Leveraging existing campus infrastructure: The EDIC will utilize existing utility infrastructure on central campus to the greatest extent possible, minimizing disruption and maximizing the use of current resources.

By constructing EDIC, MSU is creating a holistic solution: not only a cutting-edge facility for emerging digital and manufacturing fields, but also an opportunity to revitalize existing infrastructure. This strategic approach enables MSU to address the limitations of older buildings while still adapting to the evolving needs of its academic and research programs.

### 6. Does the project address or mitigate any current health/safety deficiencies relative to existing facilities? If yes, please explain.

The majority of the instructional and research functions that will be placed in the new building are currently located in buildings that do not have adequate or functionally appropriate square footage and/or infrastructure, such as the capability to add additional fume hoods and air exchanges in the research laboratory(s) to meet the needs of the programs. While there have been renovations to selected rooms and infrastructure, they come with inherent infrastructure challenges commensurate with the age of the buildings. The new construction will address ongoing challenges to optimal student and researcher health and safety, such as infrastructure obsolescence and room configurations that do not support active, collaborative and interdisciplinary learning and research. Renovation of the vacated spaces as a subsequent set of projects will bring the existing spaces into compliance with current codes and re-use will be aligned with infrastructure and functional capacity of the space.

7. How does the institution measure utilization of its existing facilities, and how does it compare relative to established benchmarks for education facilities? How does the project help to improve the utilization of existing space and infrastructure, or conversely

#### how does current utilization support the need for additional space and infrastructure?

Michigan State University (MSU) employs a **comprehensive and data-driven approach** to measure the utilization of its facilities, ensuring that space is used efficiently and aligned with institutional goals.

#### Benchmarking and Metrics:

MSU recently completed a **strategic space and facilities framework** for the College of Engineering, benchmarking against Big 10 peers. Key findings include:

- Lowest space per student: 47 assignable square feet, below peer institutions.
- **Space per faculty:** 1,468 assignable square feet, the second lowest in the peer group.
- Academic lab space per student: 9 assignable square feet, also the second lowest.
- Research space per faculty: 668 assignable square feet, below both the median and average in the peer group.

By building EDIC, MSU is targeting much needed improvements in space available to students and faculty according to benchmarking studies. The center addresses the most critical need for fume hood capacity and accommodates research not currently possible due to research space and infrastructure limitations, while also creating new academic lab space for students. The planning for EDIC has been informed by peer benchmarking studies providing MSU with targets for space per researcher and student, as well as research studies guiding the planning of lab space needs.

#### Improving Utilization:

- The planned demolition of the Urban Planning and Landscape Architecture building will eliminate 56,000 gross square feet of obsolete space, removing the need for over \$20 million in capital renewal for HVAC and ADA compliance.
- Functions previously housed in this building have recently been relocated to more efficient and aligned spaces, further optimizing MSU's space utilization and functional alignment.

#### Space Utilization Process:

MSU uses **quantitative metrics** to measure the productivity and utilization of research labs and academic office space. These include:

- Research expenditures per square foot of research space and office space.
- Net square feet per full-time equivalent employee (FTE).
- Workplace strategic framework provides updated guiding principles and space allocation guidelines for office, office support, conference and related space types. Research space phenotypes developed as part of a strategic research space framework guiding the space allocations for dedicated and shared resources.

Since implementing these metrics, MSU has achieved a **20% improvement** in research productivity, measured by research expenditures per square foot.

#### Continuous Monitoring and Peer Comparisons:

MSU regularly benchmarks space utilization against **peer institutions** using data from the National Science Foundation and the Higher Education Facilities Management Alliance. This data-driven approach to space utilization ensures that MSU makes the most of its existing resources while planning for the future needs of its growing and emerging programs.

### 8. How does the institution intend to integrate sustainable design principles to enhance the efficiency and operations of the facility?

The Engineering and Digital Innovation Center is designed to integrate innovative sustainability principles that enhance operational efficiency, reduce environmental impact, and contribute to MSU's long-term climate neutrality goals. EDIC's **key sustainability features** will be:

<u>LEED Gold:</u> The center will exceed MSU's baseline of LEED Silver by being designed to LEED Gold standards, demonstrating a strong commitment to sustainability in line with the university's 2030 Strategic Plan and its 2050 climate neutrality targets. This will ensure the facility incorporates energy-efficient systems, sustainable materials, and innovative design elements.

#### Commitment to Sustainable Health:

- As part of the 2030 Strategic Plan, the center will support MSU's goal of sustainable health in its physical environment, ensuring that spaces promote health and wellness for students, faculty, and the wider campus community.
- The facility will emphasize occupant well-being by being designed to Fitwel standards, which consist of research-based healthy design strategies that prioritize human health in the built environment. This approach will ensure the center promotes safety, comfort, and overall wellness, contributing to a productive and inspiring environment.

<u>Teaching Sustainability by Design:</u> The EDIC will act as a living example of sustainable practices, using its design and operations as educational tools for students across various disciplines. From materials science to entrepreneurship, students will experience how innovative thinking can address grand challenges like the climate crisis.

<u>Energy Efficiency and Environmental Impact:</u> The center will integrate advanced energy management systems, water conservation technologies, and sustainable landscaping to minimize its environmental footprint while optimizing operational efficiency. These systems align with MSU's broader goals of reducing energy consumption and promoting environmental stewardship.

By adopting sustainability principles beyond current standards, the Engineering and Digital Innovation Center will stand as a symbol of MSU's commitment to sustainable health, environmental responsibility, and climate action, while providing a healthy and vibrant space for its community.

9. Are match resources currently available for the project? If yes, what is the source of the match resources? If no, identify the intended source and the estimated timeline for securing said resources?

Yes, Michigan State University commits resources in the amount of \$240 million (70.5%) of the \$340 million estimated project cost. The university match will be from MSU capital and/or bonding paid for from university general fund revenue and philanthropic gifts.

10. If authorized for construction, the state typically provides a maximum of 75% of the total cost for university projects and 50% of the total cost for community college projects. Does the institution intend to commit additional resources that would reduce the state

#### share from the amounts indicated? If so, by what amount?

We respectfully request state consideration for \$70 million cost participation of the total estimated project cost of \$340 million. The state of Michigan appropriated \$30 million via the State Fiscal Year 2024 higher education bill. This request is for an additional \$70 million, through Capital Outlay or other state funding opportunities, for a total state contribution of \$100 million.

# 11. Will the completed project increase operating costs to the institution? If yes, please provide an estimated cost (annually, and over a five-year period) and indicate whether the institution has identified available funds to support the additional cost.

Building operating costs for utilities, custodial, maintenance, and staffing for the facility is estimated at approximately \$2,500,000 annually or \$12,500,000 over a 5-year period, based on current dollars and gross square footage. Additional operating costs will be funded by general fund revenues.

The operating costs will be partially offset by the removal of 56,000 gross square feet of space with annual operating expenses for utilities, custodial, and maintenance services of approximately \$400,000 annually or \$2,000,000 over a 5-year period based on current dollars and gross square footage, and the cost avoidance of over \$20 million in future infrastructure reinvestment as a result of demolition of the UPLA Building and the defunct water reservoir.

#### 12. What impact, if any, will the project have on tuition costs?

This project will not have any direct impact on tuition costs.

#### 13. If this project is not authorized, what are the impacts to the institution and its students?

If EDIC is not authorized, the impacts on MSU and its students will be significant, affecting enrollment growth, faculty hiring and research growth, and Michigan's economic and workforce development.

#### Key Impacts:

- Diminished Reputation: Without investment in EDIC, MSU's reputation as a leader in innovative and top-quality education will suffer. MSU's infrastructure is aging and with growing enrollment, MSU faces capacity limitations. The institution needs state support for the EDIC to continue to provide Michigan students with an education consistent with MSU's reputation as a top-tier educational and research institution.
- Faculty Hiring Limitations: MSU will be unable to hire additional faculty to teach and conduct research in critical fields such as engineering, computational science, cybersecurity, and digital innovation. This will hinder the university's ability to meet the growing demand for expertise in these areas, and limit talent development and state economic impact.
- Enrollment Restrictions: The university will face reduced ability to attract and enroll students in high-demand fields, such as Data and Computational Sciences in the College of Engineering, limiting the state's talent pipeline in sectors essential to Michigan's future economic growth. Additionally, student success would be negatively impacted by classroom capacity restrictions and availability. The new center provides much-needed classrooms that align with practices in teaching and learning and course enrollments and room capacities.

Negative Consequences for Michigan's Future Workforce:

- Talent Pipeline: MSU will struggle to produce enough graduates to meet industry demand in advanced manufacturing, materials science, chip development, and artificial intelligence, weakening Michigan's competitive position in these rapidly evolving fields.
- Workforce and Economic Impact: An inability to attract top talent in students and researchers in key areas will negatively impact workforce development. This, in turn, will affect the lifetime earnings potential of Michigan students, as they will lack access to the cutting-edge education and training needed for high-demand, high-paying careers.
- Reduced Research Growth: Without the capacity to expand critical areas of research, such as Materials Science and Manufacturing in the College of Engineering, MSU's ability to serve as the epicenter for academic and research excellence supporting industry and Michigan's economic needs will be greatly diminished.

#### Diminished Leadership in Innovation:

 MSU's ability to lead in teaching, learning, and innovation will be significantly diminished, affecting its reputation as a forward-thinking institution. Without the EDIC, MSU will not be able to provide the 21st-century learning environment needed to prepare students for the digital futures industries seek.

#### Partnership and Industry Development:

MSU will risk losing opportunities to be a strong partner with the state of Michigan, as well
as regionally, in attracting and retaining talent and fostering industry partnerships. The
inability to expand these relationships will limit Michigan's ability to capitalize on high-tech
industry investment and talent development in fields like AI, cybersecurity, and advanced
manufacturing.

Without this facility, MSU will be unable to respond to the critical demands of 21st-century education and industry, ultimately impacting Michigan's economic growth and the future success of its students.

### 14. What alternatives to this project were considered? Why is the requested project preferable to those alternatives?

Several alternatives to the Engineering and Digital Innovation Center were considered, including the renovation of existing facilities. However, after a thorough evaluation as part of the **strategic space and facilities framework plan**, it became clear that new construction is the only viable option to meet the university's long-term needs.

#### Why Renovation is Insufficient:

- Limited Impact: Renovations of aging facilities would yield only minor improvements and
  would not address the specialized needs of emerging fields like materials science,
  heterogeneous micro-electronic technologies, and semiconductor research. These
  disciplines require state-of-the-art labs and robust infrastructure, which cannot be provided
  in the current facilities.
- Capacity Constraints: Existing spaces, even with upgrades, are not able to accommodate the current demands for modern teaching and learning environments. The outdated infrastructure cannot support the space-per-student requirements, or the advanced technologies needed for experiential learning and digital futures programs.

#### Challenges with Current Renovation Efforts:

- Over the past decade, MSU has made extensive efforts to renovate existing instructional spaces, upgrading classrooms and teaching laboratories with new technology and finishes. However, these updates have not been able to keep pace with the shift toward active learning and interdisciplinary approaches.
- Functional misalignment: Simply replacing furniture and technology does not solve the
  core issues of functional alignment or provide the infrastructure needed for the evolving
  curricula. The current facilities are now sub-optimal for modern educational needs, limiting
  student learning outcomes.

#### Why New Construction is Necessary:

The Engineering and Digital Innovation Center will provide the **capacity**, **flexibility**, **and technology infrastructure** necessary to support a range of learning modalities and cutting-edge research. This facility will bring together programs from multiple colleges, creating an interdisciplinary ecosystem that reflects how future graduates will engage in the workforce.

 A new building allows MSU to plan strategically for the future, offering the functional alignment and high-tech environments required to remain competitive and to foster innovation in digital futures and related fields.

Ultimately, new construction is the only solution that can adequately meet the **demands of enrollment growth, research expansion**, and the need for **state-of-the-art teaching and learning environments**. It provides a long-term, scalable solution that will position MSU at the forefront of education and research in Michigan and beyond.
