Scaling up Community Care Bundles for Maternal Health

## TESTIMONIALS

**McLaren Regional Medical Center-Flint's Family Medicine Residency Clinic Women's Nurse Navigator and McLaren Health Plan Director of Medical Management:** "We have now reduced low birth weights under the states average working with us. We were able to see how to utilize our Psychology Fellows with maternal mental health from intake into postpartum. We were able to sit back and see what areas we could improve."

**ReviveCommunity Health Center CEO and Director of Operation:** "We have been able to help our moms understand the importance of going to their postpartum visit and we have an increase in the number of moms following through with postpartum visits with their OB. This helped us see where we could be of service and where we need to fill the gap."

**Hurley Medical Center's OB/GYN residency clinic Nurse Manager:** "We have a small increase in postpartum visits because of two things, coming to get their blood pressure checked after having their baby. Our residents have proposed a solution to help with providing postpartum visits at the Pediatric Clinic where majority of our patients take their newborns. We were able to see where we had gaps and how to fill them."

**Odyssey House Flint Director of Women's Specialty and Prevention Services and Family Specialist:** "We were able to see the gaps in service through the bundles and now we have implemented those that we can do within our scope of work. We were able to see what information we should have been capturing through the bundles and now we have a workflow that will capture the information."

## KEY STATS

**100+ providers** in Genesee & Kent counties have attended maternal health training

**20+ evidence-based interventions** implemented

**1,950+ pregnant people** provided with enhanced prenatal care

**750+ hours** of maternal health quality improvement technical assistance provided to health systems and hospitals

**\$18 million+ awarded** by NIH/NICHD to help support the free technical assistance we offer
