

Aftermarket Service and Parts

Protect Your Dust Collector Investment and Reduce Maintenance Costs for any collector brand

Inspection and System Assessment

Know more. If your collector has been offline, undergone sub-standard service or the process parameters have changed, a MikroPul System Assessment from MikroPul clearly defines its condition. We also offer regular compliance inspections.

Installation, Startup and Commissioning

Get into Production. MikroPul's electrical, mechanical and applications expertise will speed up your startup. We are safety oriented and will provide full data on initial performance.

Cleaning Controls, Sensing and Diagnostics

Stay Reliable. Your uptime and efficiency is maximized with effective sensing of particulate, pressure, temperature and much more. Reduce energy use with cleaning diagnostics and on-demand control.

Refocus maintenance staff on process-critical tasks by using MikroPul-Assist, remote monitoring that warns you of imminent problems.

Troubleshooting and Field Service

Get Running. Our service teams can respond quickly to schedule regular maintenance or in case of emergency.

Industry-Leading Partners

The MikroPul family includes Industry Leaders in sensing, control, filter media and ducting.

Bags and Bag Change Services

Stay Clean. Let us help you select the right media for your application, as well as the correct accessories.

Rely on us to install bags. Don't waste good bags with poor installation. MikroPul uses its own technicians or approved sub-contractors with direct factory supervision. Our OSHA 30 certified technicians assure high safety standards.

Pulse Jet and Reverse Air Baghouse

- Compliance Inspection
- System Assessment
- Controls Assessment and Improvement
- Upgraded diffuser inlets (Cascadair)
- Tube sheet repair and replacement
- Cloud-based remote monitoring on phone or tablet (MikroPul-Assist)
