

NYPA'S TREE POWER PROGRAM

Through the Tree Power Program, NYPA is increasing natural carbon storage, native biodiversity, and building energy efficiency.

OVERVIEW

- Tree Power offers trees to support customer decarbonization and sustainability goals.
- For every native tree a customer purchases, NYPA provides a second tree for free!
- Trees planted in disadvantaged communities are eligible for a two-for-one match.
- Muni/Coop, as well as State/Local governmental customers, can participate in the program every year.

THE BENEFITS OF TREES

Did you know that trees increase climate resilience? Trees reduce a/c and heating costs, stormwater runoff, and the urban heat island effect. They also support native biodiversity and increase property values.

PROVEN RESULTS

- Since **2016**, Tree Power has distributed over **8,000** trees to **75** customers across New York State.
- These trees have provided over **\$1.7m** in quality-of-life and cost saving benefits for local communities.

Tree Power is just one of many benefits of your relationship with NYPA!
