Contact your account manager or email energysolutions@nypa.gov for more information

I have fleet vehicles that I would like to electrify. Can NYPA help me?

NYPA helps set up the infrastructure required to switch your vehicles from gas or diesel to electric. We create a plan for you, identify any grants and incentives, advise you on the site, and install charging stations. We help with the infrastructure and planning required to adopt electric vehicles at your location.

We do not purchase the actual electric vehicles, but can help coordinate with NYSERDA, who administers rebate and incentive programs for electric vehicles.

I am a business. Can you help me with electric vehicle charging projects at my location? How large or small are the projects that you help with?

Yes. NYPA can provide electric vehicle infrastructure services to our business and economic development customers.

The NYPA team can assist with a range of advisory and implementation services from master planning to electrical services and installation of chargers and we are well positioned to assist customers with the electrification of entire fleets of multiple vehicles, such as those for transit or delivery.

Can you help me identify NY State grants and incentives for electric vehicles?

Yes. NYPA's eMobility team will help to identify any applicable grants and incentives. These grants and incentives include the NYSERDA Truck Voucher Program. There are also significant incentives available to municipalities from the NYS DEC to install public charging stations.

Does fleet electrification count towards Clean Energy Communities or BuildSmart NY Goals?

Clean Fleets and Municipal Clean Fleets Inventory are considered high impact actions, and municipalities can receive up to 8700 points towards their Clean Energy Community designation.

BuildSmart NY does not have any defined goals specific to EVs – but it does specify that electricity usage associated with EV charging is exempt from reporting.

I am not a business owner, and am not a government entity. I am not looking for infrastructure services. I am looking for information about the public charging station network that NYPA is building for drivers up and down the state of New York.

NYPA’s Electric Vehicle Infrastructure Services described here are for government entities and businesses that are looking to electrify their fleet. For information about EVolve NY, a separate initiative where NYPA is building a public charging network up and down New York State, review the www.nypa.gov/evolveny site to learn more.

I am interested in your electric vehicle infrastructure services. How do I contact you?

Contact us using the EV Infrastructure form at nypa.gov/ev, or reach out to us by email to energysolutions@nypa.gov.

I represent a local government. Can you install Electric Vehicle (EV) charging stations in my community. Can you help me electrify my fleet?

Yes. Our EV infrastructure team supports governmental and state agency entities including transportation agencies with their EV infrastructure needs. We can help you electrify your municipal or state agency fleet.

There are incentives available to municipalities from the NYS DEC to install public charging stations. By installing electric vehicle charging stations, municipalities are able to attract residents and visitors to their downtown commercial district, while improving local air quality and reducing emissions. Municipalities can also team with NYPA to add electric vehicle charging stations to support their municipal fleet vehicles.

For communities, NYPA ‘s EVolve NY team is leading the deployment of a network of public charging stations across New York State. We review charging station locations based on a number of factors including safety, network attractiveness, and location. We are happy to review your site. Visit Evolveny.nypa.gov to learn more.

I understand that NYPA’s EVOlveNY team is building a network of public chargers across New York State. Where can I learn more about how to access these chargers?

NYPA’s EVOlve NY team is leading the deployment of a network of charging stations across New York State to encourage the adoption of electric vehicles in support of clean energy for New York. These charging stations are available to the public. Visit Evolveny.nypa.gov to learn more.
