ETE  
EXTREME TEMPERATURE EFFICIENCY

KYSOR WARREN

We are facing two major problems these days:

Energy costs are getting more and more expensive

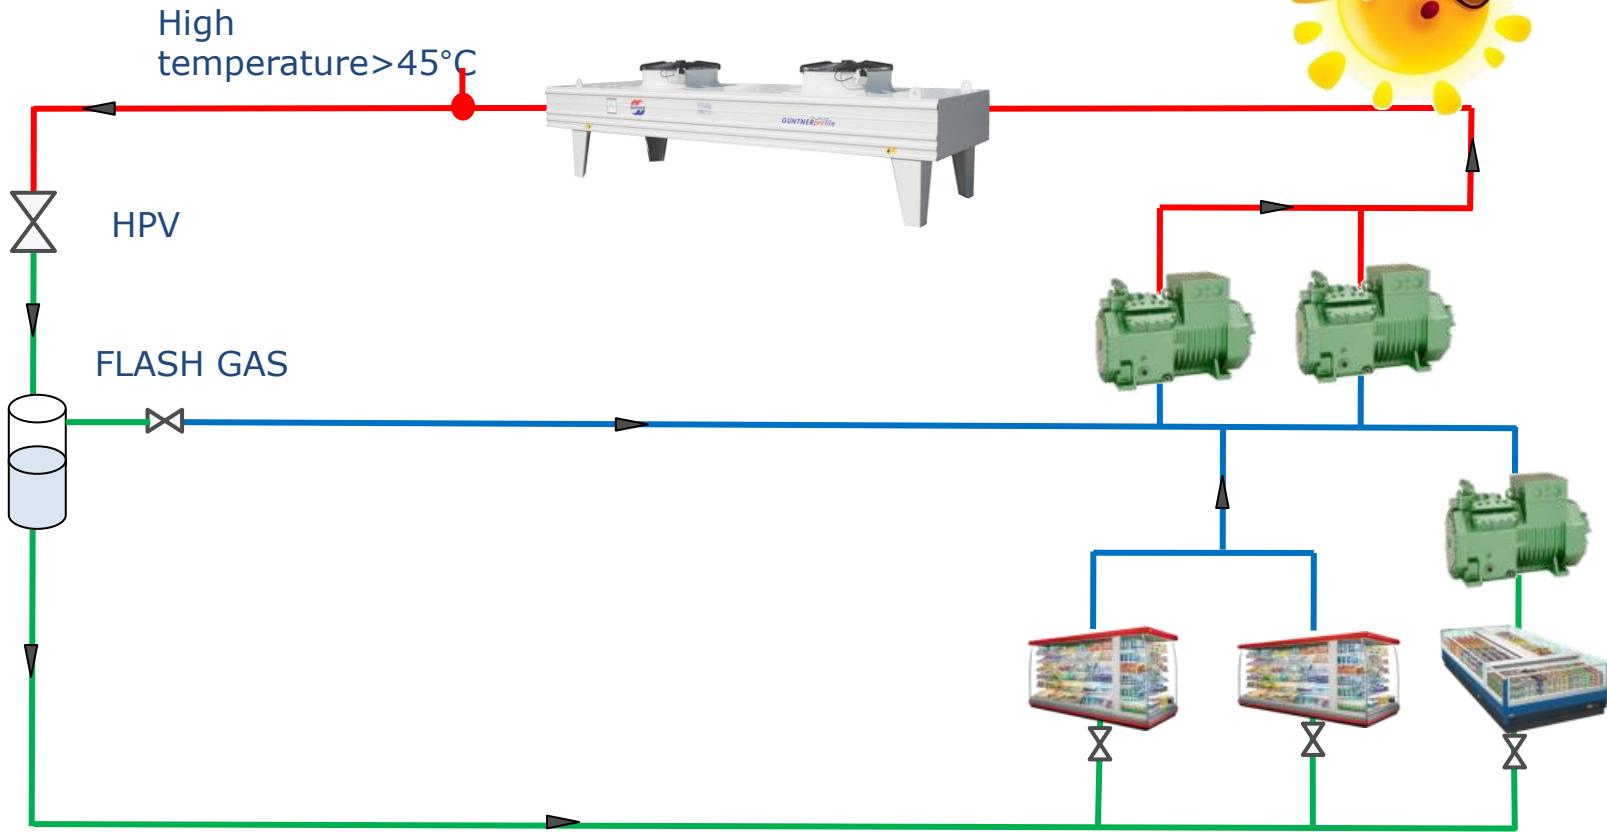

Climate change is real:  
Temperatures are rising!

**ETE – Extreme Temperature Efficiency :**

- Quite no flash gas in the system.
- Suction pressure on satellite compressor >50bar = EXCELLENT COP
- No issue in transitional regime.
- **Increase of liquid CO<sub>2</sub> in the system:** evaporators can run 100%.

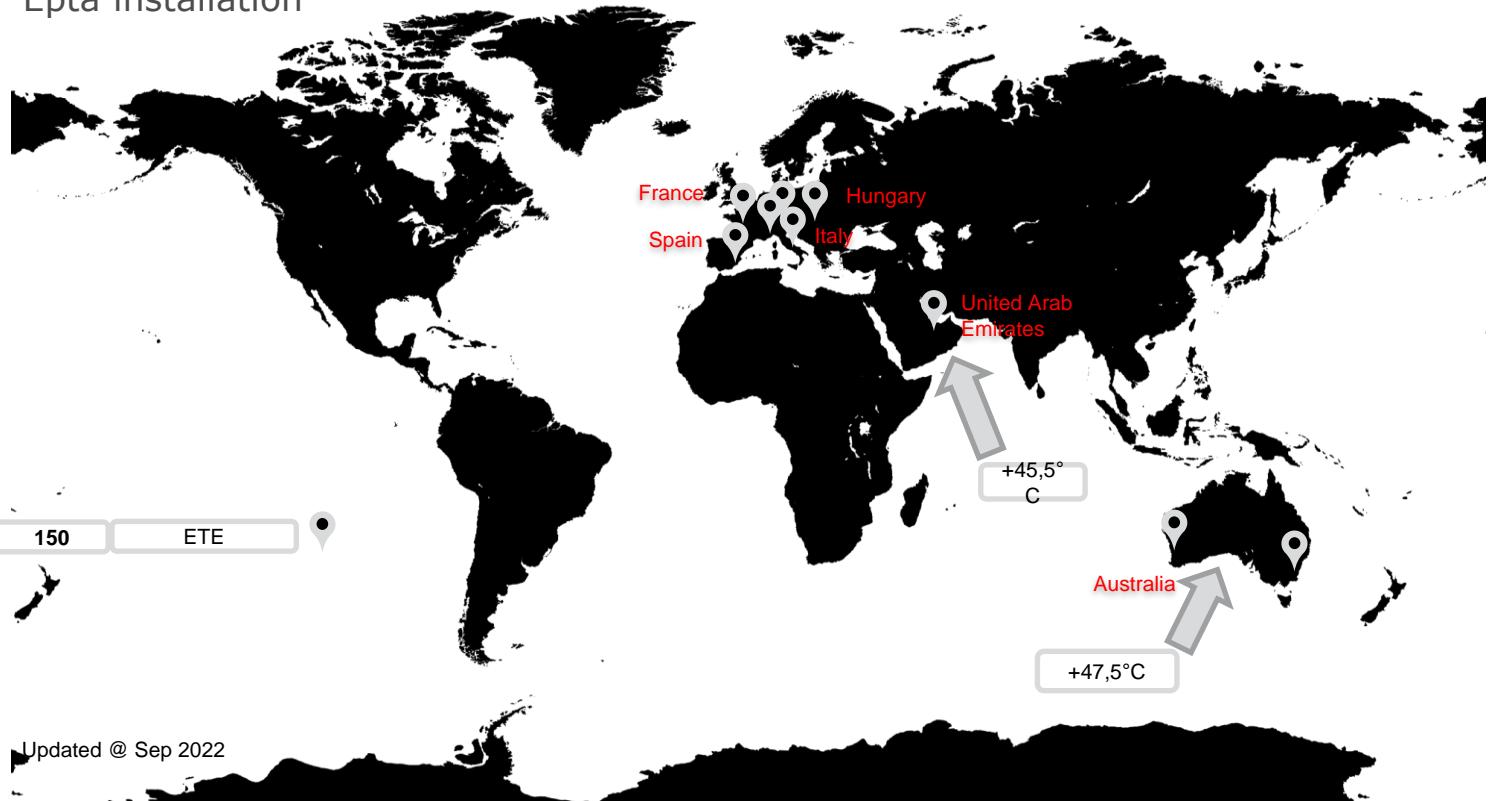

**Parallel Compression :**

- Efficient flash gas recycling.
- Suction pressure on parallel compressor >37bar GOOD COP.
- Possible issues in transitional regime.
- The evaporators don't have 100% of refrigeration capacity available.
- **No positive impact on liquid refrigerant for evaporators.**
