Food Cold Chain – Background and challenges

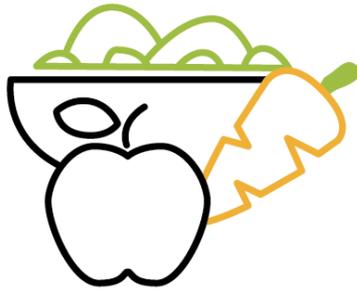

The forecast growth of population of up to 9.7 billion people and the related **increasing demand for food of over 60% by 2050** represent significant challenges for many sectors.

The need of optimizing the resources and minimizing the environmental impact leads to identify sustainable solutions all along the supply chain.

CHILVENTA

The challenges are represented by

Food waste reduction

Long term sustainability

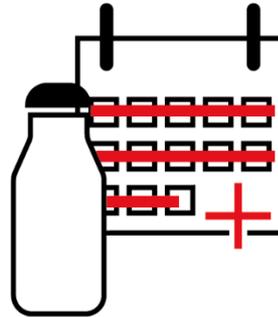

Reduce environmental impact

Guarantee the optimal storage conditions of the produce, from the very early stages of the process (such as harvesting, slaughtering, fishing, ...) up the market distribution, to reduce the food loss.

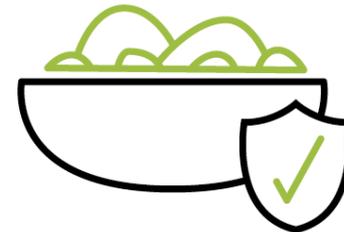

Benefits

Premium food quality

Extended shelf life

Food safety

Optimal storage conditions guaranteed through:

- a ***continuous and precise control of temperature, humidity and air quality*** through advanced specialized algorithms

CAREL offers a wide range of **parametric and programmable controllers**, provided with proprietary **programming tools** for a complete customization of the control logics.

Optimal storage conditions guaranteed through:

- a **continuous monitoring** of the storage conditions, using *local monitoring systems, like the ones of the **Boss family***, and cloud like **RED Control**, for the governance of several installations.

All these solutions are provided with **advanced alarm notifications** for a prompt intervention in case of anomalies.

Sustainable solutions must be identified to support the increasing cooling demand:

- Introduction of **high efficiency solutions** to reduce the power consumption thus to optimize the available resources
- Adoption of low GWP refrigerant, like **natural refrigerants** (R290, R717, R744)

Reducing the complexity of the solution, both in terms of setup, maintainability and optimization, is a key to ease the adoption in areas even where limited technical skills are available

CAREL technology is provided with an **advanced connectivity** with tools and **Apps** for an easier setup and fine tuning of the units.

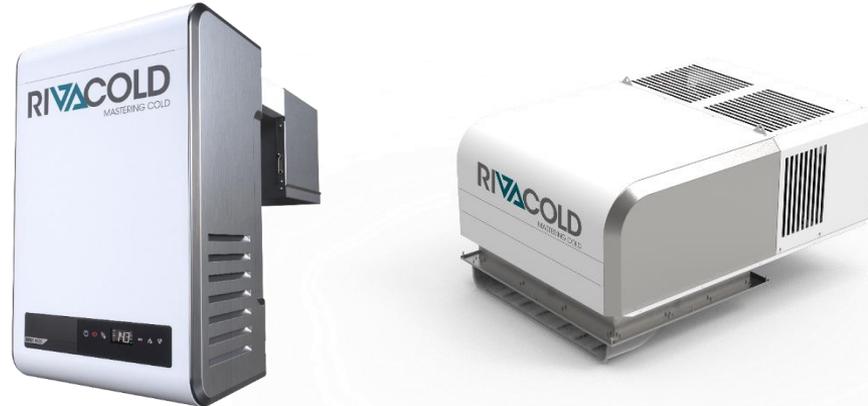

BEST *R-290 packaged system for cold rooms*

BEST – Overview - R-290 packaged system for cold rooms

CHILVENTA

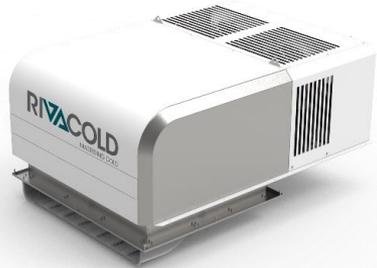

- **Indoor installation.** Permitted ambient temperature: +5 °C to +43° C
- **Natural refrigerant.** R-290, refrigerant charge \leq 150g
- **Wall and ceiling** mounted models
- **Low, Medium and High Temperature:** -25 °C to +15 °C

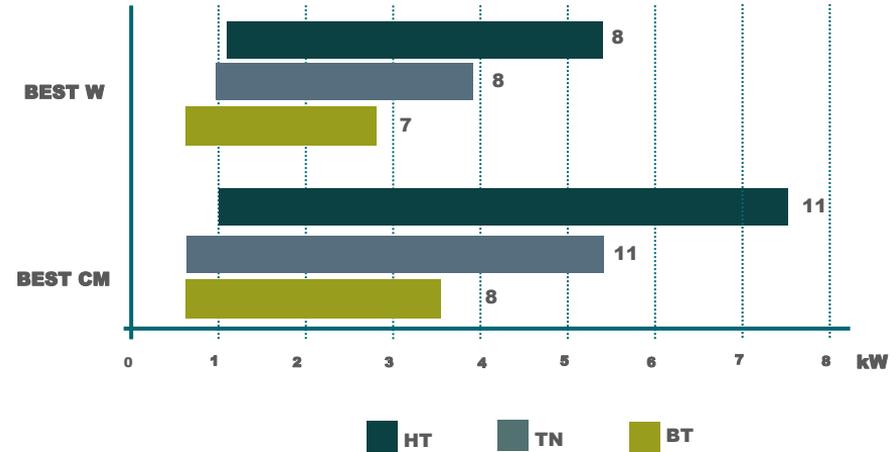

BEST – Cooling capacity

8 HT/MT Models _ 0.9 kW to 5.5 kW
7 LT Models _ 0.7 kW to 2.6 kW

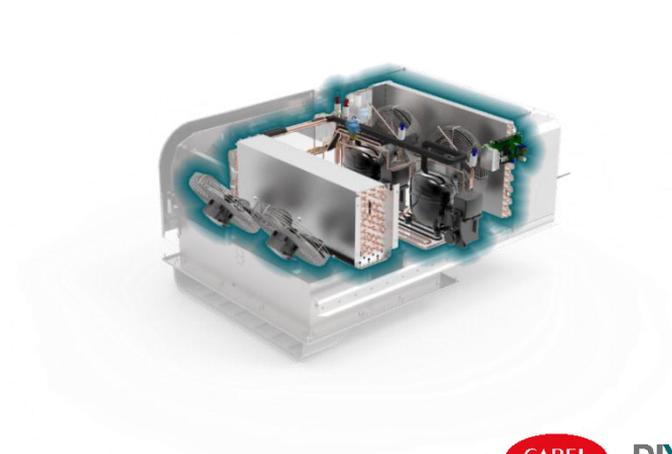

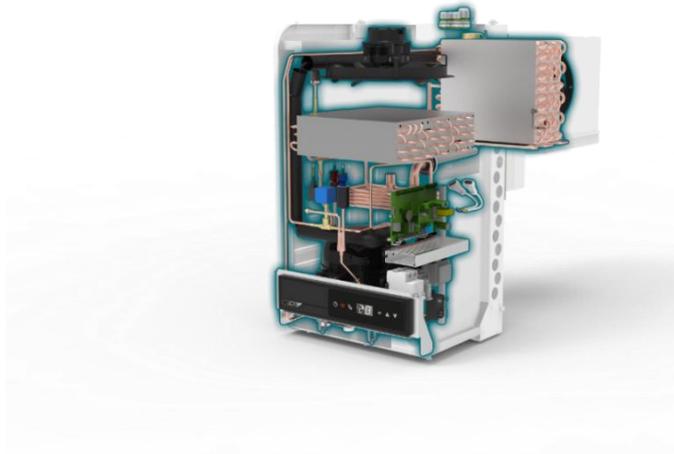

11 HT/MT Models _ 0.7 kW to 7,6 kW
8 LT Models _ 0.7 kW to 3,4 kW

BEST - Principal technical features

CHILVENTA

- A **new circuitry** revised and designed to **maximizing the COP**
- **High-efficiency** compressors
- **Electronic fan** motors
- **Thermostatic expansion valve** and pressure probes
- The new **RIV-OLUTION** electronics

BEST - Riv-olution

CHILVENTA

- A **new electronic board** developed by Carel with Rivacold
- **Dedicated hardware** specifications for monoblocks and machines using flammable refrigerant
- Programmable control – **Rivacold Software**
- **Universal** and **configurable I/O**
- **Open** communication protocols

BEST - Riv-olution

CHILVENTA

Software developed internally by Rivacold:

Flexibility **Versatility** **Scalability**

Example of SW personalization for the BEST range

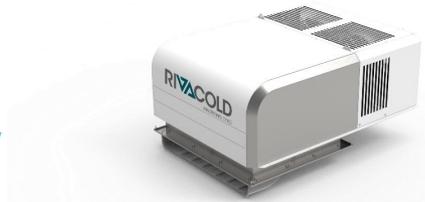

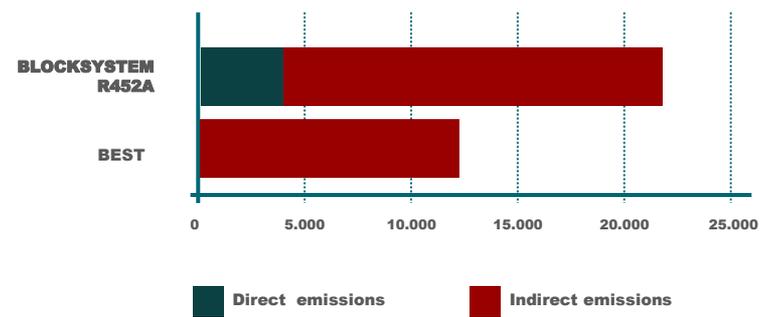

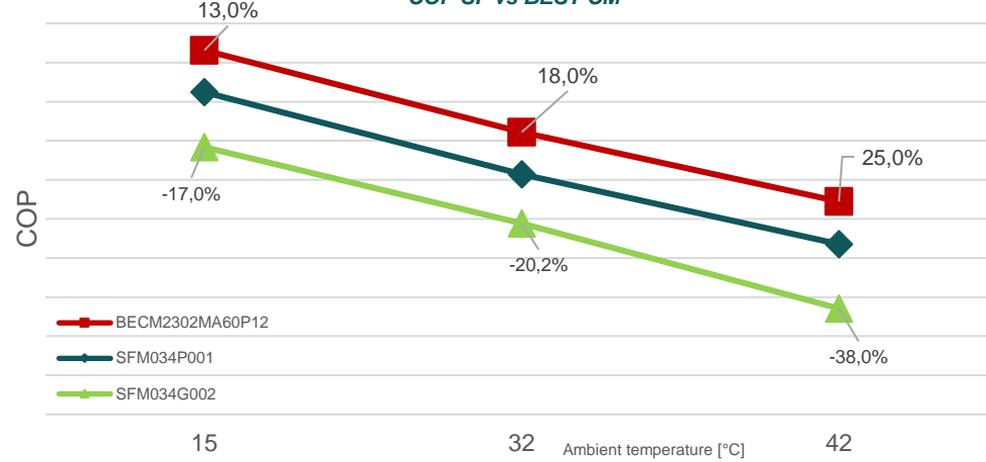

- Compressor management
- Smart Defrost, Leak alarm
- Humidity control / Neutral zone
- Electronic expansion valve management
- Condensation adjustment

BEST – Energy Saving

CHILLVENTA

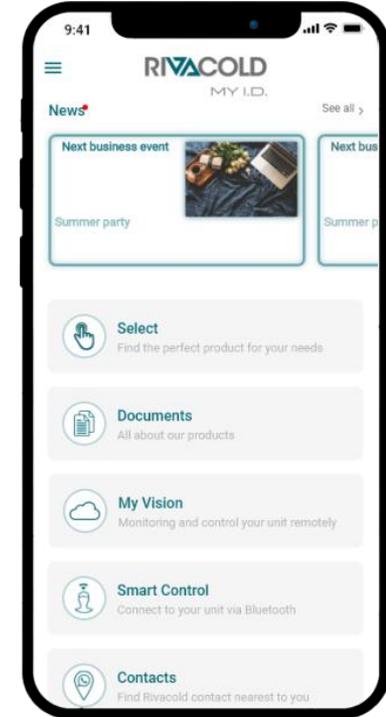

COP SF vs BEST CM

BEST – Advanced Connectivity

- **Rivacold MY I.D.** _ Single Application to control Rivacold units and manage all Rivacold services
 - **Smart Control** _ Bluetooth connection
 - **My. Vision**_ Remote control IoT

CHILVENTA

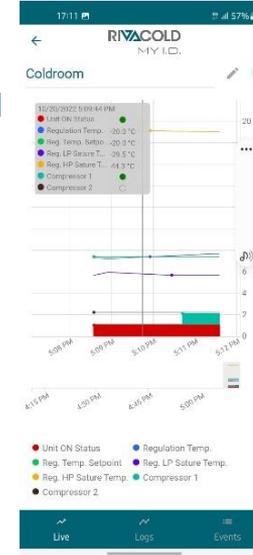

BEST – Advanced Connectivity

CHILVENTA

Compressor	
Compressor Status 1	0.0 <input type="checkbox"/>
Press. Probe Low Pressure 1	0.8 bar
Press. Probe High Pressure 1	14.0 bar

Thank you
