Customer Problem

US Cloud Service Providers are **not legal** anymore without additional encryption – no matter if the data centers are inside or outside of the EU!

<https://www.golem.de/news/urteil-zu-schrems-ii-us-datentransfer-kann-mit-verschluesselung-abgesichert-werden-2109-159602.html>

In case of data transfer into or via a none EU country **additional measures** for data privacy and data security have to be implemented.

The base is the so called CLOUD Act:

https://en.wikipedia.org/wiki/CLOUD_Act

The Clarifying Lawful Overseas Use of Data Act or CLOUD Act (H.R. 4943) is a United States federal law enacted in 2018 by the passing of the Consolidated Appropriations Act, 2018, PL 115-141, Division V. The CLOUD Act primarily amends the Stored Communications Act (SCA) of 1986 to allow federal law enforcement to compel U.S.-based technology companies via warrant or subpoena to provide requested data stored on servers regardless of whether the data are stored in the U.S. or on foreign soil.

Company's are constantly in danger. Various risks are leading to multiple liabilities. From personal to the company, and reputation to penalties.

In the past Server Encryption was good enough followed by E2E encryption. In the meanwhile many companies are acting as a platform or provide platform services. Neither those companies, nor their affiliate service providers should know about what their users share or communicate with each other, even more if we talk about sensitive content. MyPrivacy is the only company on the market right now to enable such operations with E2E encryption and full user anonymity.

SafeSpace - one technology – multiple applications and use cases

With **SafeSpace CORE**, MyPrivacy offers components that can be integrated into third-party solutions.

SafeSpace SHARE is a complete solution that secures data exchange with external and internal partners.

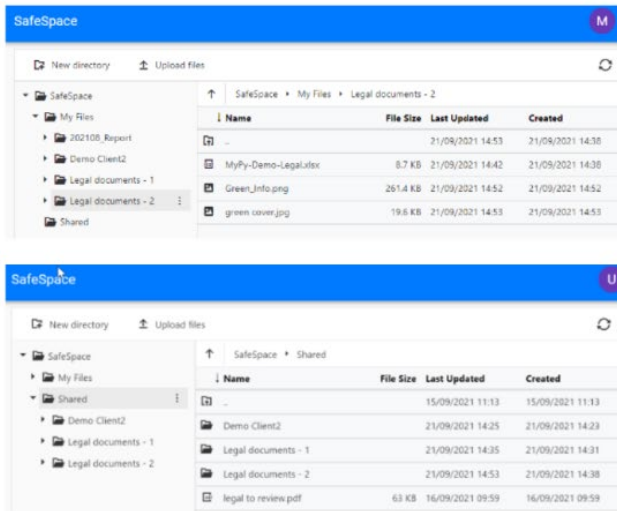

SafeSpace WHISTLEBLOWER is currently being worked on to address the requirements of the "EU Whistle-blower Protection Directive" that will soon come into force.

"SafeSpace" is universally applicable to protect data from unauthorized access and prevent unauthorized analysis of user activity. State-of-the-art cryptography enables anonymity of users, obfuscation of relationships as well as decentralization of authorization management.

Data Confidentiality

How you vs. other users you grant access to files and folders see data in the browser:

How service / storage providers, hackers
etc. see your data:

[illegible]

Configurable Chunking Size and End-to-End Encryption

With ***SafeSpace*** SHARE, MyPrivacy offers a complete solution to operate a dropbox similar solution by the company itself in any public cloud environment. Once the cloud storage is selected It is ready to use within minutes. Even using external service providers they can't spy on the data anymore or track user behavior. The system architecture also protects against internal misuse by e.g. IT admins as they do not have access to the data either.

One Platform – Multiple USE CASES

- FILE Exchange
- Data Lakes
- Predictive Maintenance
- Vehicle Black Box
- KYC Process
- CCTV Systems, Body Cams
- Quality or Production Data
- Contracts, Invoices, Credit Rating
- ...

Wherever sensitive data being shared with external or internal parties needs special protection SafeSpace is THE solution on the market.

What we are looking for

- Platform Providers from any industry
- Software Vendors as Integration Partners
- System Integrators as Channel Partners
