# Deepfakes Unmasked: Technical Landscape of Modern Scams

Bogdan BOTEZATU – Director of Threat Research @ Bitdefender

# About

- 20 years of experience in cyber-security in several roles
- 16 years under the Draco sign at Bitdefender as director of threat research and reporting
- Best known for the ransomware decryption program
- Coordinates the vulnerability research program and CVE numbering allocation with MITRE.

# Top innovators on the cyber-security scene

- 544 patents for innovation in technology, out of which about 60 are related to Al
- 1800+ employees around the world, out of which 800 working in research and engineering
- Offices in 15 countries, global online presence
- Security Operations Center in San Antonio, Texas & Bucharest, Romania
- Offensive Security and Penetration Testing center in Singapore (Horangi)
- Bitdefender is one of the largest licensors of cyber-security technologies for endpoint and CPMs

# Assisting & Supporting Cybercrime Investigations

2017

**New security portfolio** 

# Some terminology

# Fraud - Sting - Scam - Con

A scam is a scheme through which a person tries to obtain money, information, or other benefits from a victim by using fraudulent or deceptive methods.

Scammers can employ various strategies, ranging from false promises of large winnings, products or services that don't exist, to phishing attempts to obtain personal and financial data. The ultimate goal is to deceive the victim and exploit them, either financially or through other means.

# Deepfake

A deepfake is a type of digitally manipulated media content, usually video or audio, that uses artificial intelligence (AI) and deep learning techniques to create fake images or sounds that appear real.

In a deepfake video, a person's face can be replaced with someone else's, and in audio deepfakes, a person's voice can be falsified to say things they never actually said.

# Artificial Intelligence

**Artificial Intelligence (AI)** is a field of computer science that focuses on creating systems capable of performing tasks that normally require human skill and intelligence.

These systems are designed to simulate cognitive processes such as learning, reasoning, visual and language recognition, decision-making, and problem-solving.

# RULE 34

# NCIIA – Non-Consensual Intimate Image Abuse

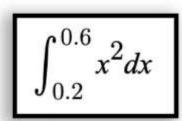

# Millions of People Are Using Abusive Al 'Nudify' Bots on Telegram

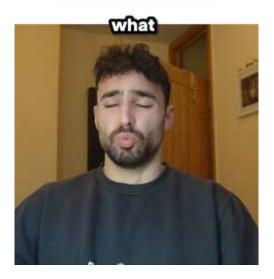

Bots that "remove clothes" from images have run rampant on the messaging app, allowing people to create nonconsensual deepfake images even as lawmakers and tech companies try to crack down.

# GEN AI can be funny

# ...or downright frightening

# Deepfakes and cons

# Deepfakes in attacks

Deepfakes allow cybercriminals to create convincing audio or video recordings impersonating high-ranking leaders (such as CEOs or CFOs). These deepfakes are often used in Business Email Compromise (BEC) schemes, where scammers convincingly pose as a company leader, requesting employees to authorize large financial transactions.

A deepfake voice recording can be used to mimic a CEO's voice in a phone call with the finance department, asking for an urgent bank transfer.

Deepfake videos of executives can be used in video conferences, enhancing the illusion of legitimacy when requesting sensitive financial actions.

# Deepfakes in attacks against regular people

- Good enough for the untrained eye
- Uses a celebrity or public personality easy to recognize by the masses
- Always leverages the idea that they are exposing a secret

# Deepfakes in attacks against regular people

# ...and in real time

# Gen AI and scams

GenAl helps cybercriminals organize complex scams, such as "pig butchering" schemes (a combination of romance and investment scams). Scammers create intricate stories, combining video, audio, and text to set the scene and spark interest.

Often, Al also provides context and localization, enabling scammers from China to target English or Romanian speakers as if they were native speakers.

"Pig butchering" schemes can last for weeks or months, but typically leave the victim penniless and in a dire emotional state.
