APPENDICES

for the

Proposed Redevelopment of the former St. John Villa Campus

57 Cleveland Place

Staten Island, New York

Appendix A:

Cultural Resources

(Letter of Resolution/ SHPO Correspondence)

LETTER OF RESOLUTION
between the
NEW YORK CITY SCHOOL CONSTRUCTION AUTHORITY
and the
NEW YORK STATE OFFICE OF PARKS, RECREATION, AND HISTORIC PRESERVATION

Regarding

DEMOLITION OF CERTAIN EXISTING STRUCTURES AT SAINT JOHN VILLA ACADEMY AT 57 CLEVELAND PLACE IN THE COUNTY OF RICHMOND, CITY OF NEW YORK

WHEREAS, pursuant to the New York State Historic Preservation Act of 1980 (NYSHPA), and state laws and regulations, the New York City School Construction Authority (NYCSCA) is responsible for undertaking activities affecting historic properties in a manner that emphasizes preservation, avoidance and/or mitigation of the impact of undertakings that might adversely affect historic resources listed in or eligible for inclusion in the State or National Registers of Historic Places to the fullest extent possible; and

WHEREAS, the NYCSCA acquired the real property known as Saint John Villa Academy (the "Campus" or "Saint John Villa Academy") to redevelop for the City's Department of Education, which redevelopment is expected to consist of up to five new schools and athletic fields; and

WHEREAS, the NYCSCA and the New York State Office of Parks, Recreation, and Historic Preservation ("OPRHP") (collectively, the "Parties") recognize that the Campus is a National Register of Historic Places (NRHP)-eligible resource; and

WHEREAS, in connection with the redevelopment of the Campus, NYCSCA proposes to demolish the existing Villa Elementary School, High School, Pre-K Center, Annex, and Garage on the Campus, located within the Staten Island neighborhood of Concord, to develop a new replacement facility (the "Project"); and

WHEREAS, the Project is considered an undertaking under the NYSHPA; and

WHEREAS, pursuant to Section 14.09 of the NYSHPA, OPRHP is responsible for determining the effects of undertakings that may potentially impact historic resources located on lands within the State of New York; and

WHEREAS, the NYCSCA and OPRHP have engaged in discussions regarding the Project to assess the impact of this undertaking on historic resources; and

WHEREAS, in or about 2018, the NYCSCA engaged a multi-disciplinary team of architects, structural and system engineers, and landscape architects to develop an existing conditions inventory and assessment of the Campus; and

WHEREAS, the oldest buildings on the Campus, the Villa and Elementary School, have undergone several modifications to their original design affecting their architectural style and significance; and

WHEREAS, the access to and entrances of existing buildings do not meet current standards for accessibility and negatively impact safe access to and circulation around the Campus; and

WHEREAS, the existing buildings do not meet current building and safety codes requirements for egress and accessibility and require significant alterations to provide the required number and width of exits, and required elevators thereby reducing the available area for educational spaces; and

WHEREAS, the existing buildings' structural systems cannot be adapted into contemporary instructional spaces because the existing building widths and column grids cannot accommodate and are not compatible with NYCSCA standards for classrooms; and

WHEREAS, several of the existing buildings exhibit compromised structural systems including cracked exterior façades and foundation walls, and a portion of the Annex's first floor has collapsed and is currently supported by temporary shoring; and

WHEREAS, the existing buildings exhibit water infiltration from cracked and detached face brick façades, deteriorated brick facing, and corroded windows; and

WHEREAS, Staten Island is one of the fastest growing districts in the City and continues to demonstrate need for new educational facilities to support the growing student population; and

WHEREAS, the current FY2020-2024 Five-Year Plan set aside funding for the construction of new seats throughout the borough and on all grade levels; and

WHEREAS, the redevelopment of the Campus will enable the City to build 2,000 new school seats, bring the City much closer to the goal of providing 5,000 new seats to Staten Island, and will serve students from Pre-K to 12th grade, as well as students with special needs; and

WHEREAS, there were no alternative privately-owned sites of comparable size, residential context, and unencumbered by Special Flood Hazard Areas and State-Regulated Wetlands on the market for sale in the vicinity of the proposed site; and

WHEREAS, the Parties agree that it is in the public interest to fully demolish the Villa, Elementary School, High School, Pre-K Center, Annex, and Garage in order to design and construct a new state-of-the-art educational campus that would comply with all building and safety codes and satisfy the educational requirements and needs of the school district; and

WHEREAS, NYCSCA and the OPRHP are State Agencies as defined by Section 14.03 of NYSHPA, and have mutual interests and obligations in the protection and preservation of historic properties located on lands within the State; and

WHEREAS, the Parties desire to enter into this Letter of Resolution to memorialize the obligations of the NYCSCA and the OPRHP with respect to the Campus.

NOW, THEREFORE, NYCSCA and the OPRHP mutually agree as follows:

1. Purpose. This Letter of Resolution (LOR) between the Parties establishes the course of action necessary for the successful mitigation of the potential adverse impacts of the demolition of the Villa, Elementary School, High School, Pre-K Center, Annex, and Garage at Saint John Villa Academy in accordance with Section 14.09 of the NYSHPA.

2. Scope of Agreement

   a. The NYCSCA will act as the lead agency in collaboration with qualified consultants, to prepare and present all necessary documentation required by the NYSHPA and State Environmental Quality Review (SEQR) to fulfill the New York State Environmental Quality Review Act (SEQRA) mandates.

   b. The Parties recognize that, in the absence of any unanticipated conditions discovered during the course of this undertaking, the successful execution of this LOR fulfills NYCSCA's responsibilities to explore all feasible and prudent alternatives to avoid and/or mitigate any adverse impacts of the undertaking, in accordance with SEQRA and Section 14.09 of the NYSHPA.

   c. NYCSCA will mitigate the adverse impacts of the demolition of the Villa, Elementary School, High School, Pre-K Center, Annex, and Garage by preparing and submitting the following documentation to OPRHP:

      (1) NYCSCA will preserve the existing Chapel building and will submit a restoration plan to OPRHP, who will have thirty days to review and comment upon the proposed work.

      (2) NYCSCA will preserve the existing stone wall, iron fencing, and gates located at a portion of the site's perimeter. Where they are in good condition, the stone wall and iron fence will be preserved, and a reconstruction will be provided around a larger extent of the campus boundary.

(3) NYCSCA will continue to consult with OPRHP on the designs of the new buildings and site work proposed on the Campus that will aim to reflect existing visual cues, massing, and scale of the historic buildings currently existing at the Saint John Villa Academy. NYCSCA will submit its proposed design to OPRHP, who will have thirty days to respond and comment on the proposed designs.

(4) Prior to their demolition, NYCSCA will compile photo documentation of the Villa, Elementary School, High School, Pre-K Center, Annex, and Garage buildings in the manner set forth in Exhibit 1. Two (2) copies of the photo documentation shall be provided to OPRHP. NYCSCA will send one copy of the photographs to a local library or historical society. A proof sheet will be provided to OPRHP for review thirty days before the buildings are scheduled for demolition. The actual photos will be included in the documentation reports, which NYCSCA will send to OPRHP within six months after the buildings are demolished.

(5) NYCSCA has scanned existing drawings of the existing buildings at Saint John Villa Academy and has archived some in its electronic database. These will be included in the documentation report.

(6) NYCSCA will install interpretive panels in the Chapel building that may include photos of the existing Campus. The designs for the interpretive panels shall be submitted to OPRHP for review and comment before design is final.

3. Completion of Project. Pursuant to Section 14.09 of the NYSHPA, this LOR specifies how the undertaking will proceed. At the completion of the Project, NYCSCA will certify in writing that it has completed the undertaking in accordance with the LOR and will provide any additional documentation regarding the Project at the reasonable request of the OPRHP.

4. Execution. This LOR may be executed in counterparts, each of which shall be regarded as an original and all of which shall constitute one and the same instrument. Execution of this LOR by the NYCSCA and the OPRHP, and implementation of its terms shall demonstrate that the NYCSCA has taken into account the impact of the undertaking on historic properties.

EXHIBIT I

Photo Documentation Requirements

- Photographs submitted as documentation should be clear, well-composed, and provide an accurate visual representation of the building and its significant features.
- Digital photographs should be taken using a ten (10) megapixel or greater digital SLR camera.
- Images should be saved in Tag Image File format (TIFF) or RAW format images. RGB color digital TIFFs are preferred
- Selected images for documentation package should be printed as follows: 1-3, 8 by 10-inch views of the overall facility. Sufficient 5 by 7-inch additional images to fully document the present condition of all elevations of the facility.
- Several historic images (if available) depicting the facility should be reprinted at the 5 by 7-inch size and included in the documentation
- Images should be printed on a high-quality color printer on compatible high quality photographic paper stock (HP printer us HP Paper, Epson printer use Epson paper)
- Each photograph must be numbered, and that number must correspond to the photograph number on a photo log or key. For simplicity, the name of the photographer, photo date, etc. may be listed once on the photograph log and doesn't need to be labeled on every photograph
- The label information will be written within the white margin on the front of the photograph using an archival photo labeling pen. Label information can also be generated by computer and printed directly in the white margin (no adhesive labels).
- Information will not be printed on the actual image – only the photo margin or back of the photograph will be used for labeling.
- At a minimum, photographic labels will include the following information: Photograph number, Name of the Property, County, and State.
- Photos will be placed in archival quality photo sleeves. Two (2) sets of images should be produced.

NEW YORK STATE OF OPPORTUNITY. Parks, Recreation, and Historic Preservation

NYCSCA
Redevelopment of St. John Villa Academy
57 Cleveland Pl.
Staten Island, Richmond Co.
21PR00621

Dear Thomas Nielsen:

Thank you for requesting the comments of the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the submitted materials in accordance with the New York State Historic Preservation Act of 1980 (section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the Division for Historic Preservation and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8) and its implementing regulations (6NYCRR Part 617).

The project consists of the demolition of an entire complex of historic school buildings. Linda Mackey in our National Register unit has determined that the complex is eligible for listing in the National Register and she has prepared an extensive Resource Evaluation that describes the cultural, historical, and architectural significance of the complex and it is attached in CRIS. Because of the historic status of the complex, we have reviewed the SCA's proposal to demolish the historic campus.

It is the opinion of OPRHP that the project will have an Adverse Impact on the historic Catholic complex. At this time, we recommend that you consult with our office on ways to avoid the adverse impact. Please prepare an alternatives analysis for our review and approval.

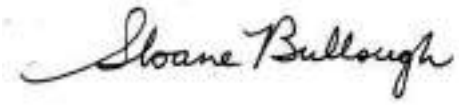
An alternatives analysis should include, but not be limited to:

1. Information about whether the historic structures can be reused to meet SCA's needs.
2. Alternative site analysis. Is there another site that could be used to meet SCA's needs instead of this site?
3. Marketability information about the site. Have there been any other developers interested in the site and how long was it listed?
4. An analysis of whether some of the buildings can be completely or partially

reused.

We would appreciate if the requested information could be provided via our Cultural Resource Information System (CRIS). If you have any questions, I can be reached at sloane.bullough@parks.ny.gov.

Sincerely,



Sloane Bullough
Historic Sites Restoration Coordinator via email only

1.0 EXECUTIVE SUMMARY

At the request of the Industrial and Environmental Hygiene (IEH) Division of the New York City School Construction Authority (NYCSCA), AKRF Engineering, P.C. (AKRF) conducted a Phase I Environmental Site Assessment (ESA) for the St. John Villa Campus (hereafter referred to as the "Site"). The Site is located at 57 Cleveland Place in Staten Island, New York (New York City Tax Block 3087, Lot 1, and Block 3089, Lot 59) in a residential area with some educational and commercial uses. Alternative addresses for the Site include 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, and 18 Hastings Street. The Site consists of an approximately 7.2-acre property containing eight buildings associated with a parochial school constructed between approximately 1891 and 2005, including: a 3-story elementary school with a partial cellar, a 2-story convent with a cellar, a 4-story chapel with a cellar, a 2- to 3-story high school, a 1- to 2-story gymnasium, a 2-story annex, a 1-story child development center, and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a swimming pool with a pool shed. The Site is being considered for acquisition and conversion to a public school facility by the NYCSCA.

The Site was occupied by Clar Manor boarding house prior to acquisition by St. John Villa in 1930. The Manor house was converted into the convent building, and additional structures were added to St. John Villa throughout the 1900s. Some small accessory structures on the eastern portion of the Site were present from 1930 to 1955. The current layout, including the addition to the high school, was present since 2005.

The Site is bounded to the north by Garson Avenue, followed by residences; to the east by Narrows Road South, followed by the Staten Island Expressway; to the southeast by Hastings Street, followed by residences; to the south by Knauth Place, followed by residences; to the west by Landis Avenue followed by St. Joseph Academy and Retreat Center; and to the northwest by Cleveland Alley, followed by residences.

The main objective of the Phase I ESA is to identify recognized environmental conditions (RECs) and environmental concerns that may affect the suitability of the Site for use as a school. RECs are defined in ASTM International (ASTM) Standard Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or, (3) under conditions that pose a material threat of a future release to the environment. Note that controlled recognized environmental conditions (CRECs) are considered to be RECs and are listed in the Executive Summary and Conclusions of this Phase I ESA. Additionally, vapor encroachment conditions (VECs) were evaluated as per ASTM E 2600-10.

Other environmental issues and conditions that, in the opinion of the *environmental professional* conducting the assessment, would not be considered *RECs* are identified in this assessment. These may include *historical RECs and/*or *de minimis* conditions. The Phase I ESA also includes a preliminary evaluation of specific potential environmental issues or conditions that are, according to ASTM E 1527-13, considered non-scope considerations. These issues include radon, asbestos-containing material (ACM), polychlorinated biphenyl (PCB) - containing light ballasts and caulking materials, exterior lead-based paint (LBP), chemical storage, wetlands, regulatory compliance issues, dry cleaner and other industrial emissions, mold, biological agents, electromagnetic fields, and methane. The Phase I ESA included a review of federal, state, and local records, previous reports (if available) and historical

documents; visual observation of the Site and adjoining properties; and interviews with selected Site representatives.

The assessment requested by the NYCSCA is intended to identify conditions that would have the potential to impact the value of the Site or the development and use of the Site as a public school facility. The assessment was also conducted for purposes of environmental due diligence in order to qualify for the innocent landowner, a bona fide prospective purchaser or a contiguous property owner defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The Phase I ESA included evaluation of the following: current and historical Site usage; current and historical usage of adjoining properties; regulatory agency records review; on-site solid waste management and disposal practices; on-site hazardous materials and petroleum products management; chemical storage, ACM, PCBs and exterior LBP management; wetlands; regulatory compliance issues; dry cleaner and other industrial emissions; radon; mold and moisture intrusion; biological agents; electromagnetic fields; and potential for methane generating materials.

Summary of RECs, CRECs, VECs and Environmental Concerns

On-Site REC/CREC/VEC:

- Three in-service fuel oil underground storage tanks (USTs) with two closed-status Spill listings and one reported tank-tightness test failure.
- Potential historic material of unknown origin and/or abandoned USTs associated with demolished historic on-site buildings, and/or potential historic fill associated with past nearby highway construction.

Off-Site RECs/CRECs/VECs:

- Potential contamination associated with historic railroad tracks located east of the Site.
- A New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) listing west-adjacent to the Site at 77 Chicago Avenue.
- A groundwater monitoring well observed during Site reconnaissance on the Cleveland Place sidewalk between the two Site lots.

This Phase I ESA has revealed the following other environmental concerns associated with the Site:

- Suspect ACM in building materials and/or buried demolition debris/fill material.
- Suspect LBP identified on painted surfaces and/or buried demolition debris/fill material.
- Potential PCB-containing building materials and/or buried demolition debris/fill material.
- A 55-gallon drum with unknown contents was observed near the High School building.
- Water damage and associated mold growth.

Recommendations

Based on the findings of the Phase I ESA, AKRF recommends performing a Phase II Environmental Site Investigation (ESI) at the Site to investigate the identified RECs/VECs. The ESI should include a geophysical survey and subsurface soil, soil vapor, and groundwater sampling in the areas of concern. Areas that were inaccessible during the Phase I Site reconnaissance should be inspected during the Phase

II ESI to check for potential additional RECs and/or environmental concerns. In addition, AKRF also recommends that any ACM, LBP, mold, and/or PCB-containing building components affected by future renovations, repairs, or demolition at the Site be identified and properly managed during such activities. Furthermore, the Site's PBS registration should be updated to correct the 6,000-gallon UST capacity, and tank tightness testing information should be reviewed to ensure compliance with PBS requirements.

2.0 INTRODUCTION

This report summarizes the results of the Phase I Environmental Site Assessment (ESA) of the St. John Villa Site, located at 57 Cleveland Place in Staten Island, New York, on Tax Block 3087, Lot 1, and Block 3089, Lot 59. Alternative addresses for the Site include 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, and 18 Hastings Street.

The Site consists of an approximately 7.2-acre property developed with eight buildings: a 3-story elementary school with a partial cellar, a two-story convent with a cellar, a 4-story chapel with a cellar, a 2- to 3-story high school, a 1- to 2-story gymnasium, a 2-story annex, a 1-story child development center, and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a pool with a pool shed. The Site is bounded to the north by Garson Avenue, followed by residences; to the east by Narrows Road South followed by the Staten Island Expressway; to the southeast by Hastings Street, followed by residences; to the south by Knauth Place, followed by residences; to the west by Landis Avenue followed by St. Joseph Academy and Retreat Center; and to the northwest by Cleveland Alley, followed by residences.

Visual inspection of the Site and surrounding area was performed on April 18, 2017 by Ms. Amy Jordan of AKRF, accompanied by Mr. Robert Bustamante, the Facilities Manager at the Site, Mr. Mathew Mankovich of NYCSCA, and other members of the NYCSCA team. At the time of the inspection, the weather was clear and approximately 65 ºF, and visibility was not obscured by weather conditions. Photographs taken during the reconnaissance are provided in Appendix C.

2.1 Selected Definitions

The following terms are used throughout this report and, for the purpose of clarity, corresponding definitions are provided. These terms are fully defined in ASTM E 1527-13 and ASTM E 2600-10.

Controlled recognized environmental condition (CREC) – A recognized environmental condition resulting from a past *release* of *hazardous substances or petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls, or engineering controls).*

Historical recognized environmental condition (HREC) – A past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls,* or *engineering controls).*

Recognized environmental condition (REC) - The presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at *a property*: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the *environment;* or, (3) under conditions that pose a *material threat* of a future *release* to the *environment.*

Environmental Professional - A person meeting the education, training, and experience requirements as set forth in 40 CFR § 312.10(b), necessary to conduct a *site reconnaissanc*e, *interview*s, and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in 40 CFR § 312.20(e) and (f).

Vapor Encroachment Condition (VEC) – The presence or likely presence of chemical of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property.

2.2 Purpose and Scope

The purpose of this assessment is to identify *RECs, CRECs, VECs,* and certain other environmental issues or concerns as they existed at the Site at the time of the Site visit. The assessment is intended to identify conditions that would have the potential to impact the value of the Site or the development and use of the Site as a public school facility. The assessment was also conducted for purposes of environmental due diligence in order to qualify for the innocent landowner, a bona fide prospective purchaser or a contiguous property owner defense under the Comprehensive Environmental Responsibility Compensation and Liability Act (CERCLA). The Phase I ESA included, but was not limited to an assessment of the following potential environmental issues: current and historical Site usage; current and historical usage of adjoining properties; regulatory agency records review; on-Site solid waste management and disposal practices; on-Site hazardous materials and petroleum products management; asbestos-containing material (ACM), polychlorinated biphenyl (PCB) - containing equipment and lead-based paint (LBP) management; wetlands; regulatory compliance issues; dry cleaner and other industrial emissions, radon, mold and moisture intrusion; biological agents; electromagnetic fields; and, potential for methane generating materials.

This evaluation was conducted by qualified *environmental professionals* utilizing a standard of good commercial and customary practice in accordance with the ASTM E 1527-13. The scope of work completed for this evaluation meets all requirements of ASTM 1527-13 and includes the following:

- Documenting the physical characteristics of the Site through a review of available topographic, geologic, wetland, flood plain, groundwater data and Site observations.
- Researching the Site history through a review of reasonably ascertainable standard sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Documenting current Site conditions, via observations and interviews, regarding the presence or absence of hazardous substances/petroleum products; the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes; the presence of electrical equipment that utilizes oils which potentially contain PCBs; and the presence of storage tanks (above and below ground), floor drains, drains that discharge to subsurface, former septic tanks and drywells.
- Determining the usage of adjoining and nearby properties to identify the likelihood for environmental conditions (if present and/or suspected) and concerns to migrate onto the Site.
- Evaluating information contained within federal and state environmental databases and other local environmental records, within specific search distances.

2.3 Additions, Deviations, Deletions, Data Failures, and Data Gaps

The following environmental issues that are outside the scope of (additions to) ASTM E 1527-13 were evaluated:

- A review of available radon data for the Site vicinity
- A review of available wetlands data
- A visual assessment for water damage and mold
- A visual assessment for suspect ACM
- A visual assessment for suspect LBP
- An assessment of potential methane generation on-Site or migration to the Site
- Regulatory compliance
- PCB light ballasts and caulking materials
- Biological agents (mold, pigeon guano, medical waste, etc.)
- Air emissions from dry cleaners and other industrial sources
- An assessment of the potential presence of electromagnetic fields (EMF)
- An assessment of any dust generating activities on or near the Site.

The following deviations, data gaps and deletions from ASTM E 1527-13 were necessary in conducting this assessment:

- The property area history review was not conducted in five-year intervals. However, sufficient information about the history of the Site and surrounding area could be obtained from the available historical Sanborn maps, aerial photographs, city directories, and local records, and this data gap is not likely to alter the conclusions of this report.
- The garage and the northwestern portion of the Site were inaccessible during Site inspection. The garage reportedly contains storage of machinery and light maintenance operations, and the northwestern portion of the Site is fenced off with dense woods and steep slopes. This data gap is not likely to alter the conclusions of this report.

2.4 Limitations and Exceptions

AKRF has prepared this Phase I ESA using reasonable efforts in each phase of its work to identify RECs associated with hazardous substances, wastes and petroleum products at the Site. The methodology of the Phase I ESA was consistent with the ASTM E 1527-13. Findings within this report are based on information collected from observations made on the day of the Site investigation and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes. AKRF makes no representation or warranty that the past or current operations at the Site are or have been in compliance with all applicable federal, state and local laws, regulations and codes.

Regardless of the findings stated in this report, AKRF is not responsible for consequences or conditions arising from facts that were concealed, withheld, or not fully disclosed at the time the evaluation was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Site and neighboring properties that could impact the Site. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM E 1527-13. The information provided in the regulatory database report is assumed to be correct and complete.

This report was prepared for the sole use of NYCSCA and related New York City municipal agencies pursuant to the AKRF Contract dated August 1, 2014.

3.0 SITE DESCRIPTION

3.1 Site Location and Legal Description

The Site is located at 57 Cleveland Place in Staten Island, New York (New York City Tax Block 3087, Lot 1, and Block 3089, Lot 59) in a residential area with some educational and commercial uses. Alternative addresses for the Site include 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, and 18 Hastings Street.

The Site consists of an approximately 7.2-acre property developed with eight buildings: a 3-story elementary school with a partial cellar, a two-story convent with a cellar, a 4-story chapel with a cellar, a 2- to 3-story high school, a 1- to 2-story gymnasium, a 2-story annex, a 1-story child development center, and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a pool with a pool shed.

The Site is bounded to the north by Garson Avenue, followed by residences; to the east by Narrows Road South followed by the Staten Island Expressway; to the southeast by Hastings Street, followed by residences; to the south by Knauth Place, followed by residences; to the west by Landis Avenue followed by St. Joseph Academy and Retreat Center; and to the northwest by Cleveland Alley, followed by residences.

According to the New York City Department of Buildings (NYCDOB) and the Department of City Planning (NYCDCP) zoning map, the Site is zoned R1-2 (Residential). Neither the Site nor adjacent properties contain Hazardous Materials "E" Designations or "D" Restrictive Declarations. A map showing the location of the Site is presented in *Appendix A.* A Site plan showing the physical layout including adjacent land use is presented in *Appendix B.* Photographs of Site and surrounding areas are included in *Appendix C*. A zoning map is included in *Appendix J.*

An addition to the north of the high school building, not shown on the 2007 fire insurance map, was noted during the Site inspection.

3.2 Physical Setting

3.2.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle Maps, *The Narrows, NY – NJ,* dated 2013, the elevation of the Site ranges from approximately 100 to 140 feet above the North American Vertical Datum of 1988 (an approximation of mean sea level), to a high point in the center of the Site. The nearest surface water body is Grasmere Lake, approximately 3,000 feet to the west. The Lower Bay of New York Bay is located approximately 3,000 feet southeast and 4,500 feet east of the Site. A copy of the topographic map is presented in *Appendix A.*

3.2.2 Geology

According to the *USGS Geologic and Geohydrologic Reconnaissance of Staten Island, New York* (1988) the Site is underlain by Pleistocene glacial deposits consisting primarily of clay and sand with some boulders. These deposits are underlain by the Cretaceous clay member of the Raritan formation approximately 200 to 250 feet below ground surface (bgs). The Raritan formation is in turn underlain by Staten Island Serpentine crystalline bedrock at approximately 250 to 300 feet bgs.

3.2.3 Soils

According to the New York City Reconnaissance Soil Survey compiled by the United States Department of Agriculture-Natural Resources Conservation Service, soil beneath the Site is described as: nearly level to gently sloping areas partially filled with natural materials, and a mixture of anthropogenic soils and red till soils.

3.2.4 Hydrology

According to the *USGS Geologic and Geohydrologic Reconnaissance of Staten Island, New York*, groundwater is anticipated to be encountered approximately 90 to 130 feet below grade, flowing in a south-southeasterly direction toward the Lower Bay, located approximately 3,000 feet southeast of the Site. However, actual groundwater levels and/or flow direction may vary due to geology, seasonal fluctuations in precipitation, and other factors beyond the scope of this study. There are no surface water bodies or streams on or immediately adjacent to the Site. The closest surface water body to the Site is Grasmere Lake, approximately 3,000 feet to the west. Stormwater in the Site vicinity flows to the New York City sewer system. Groundwater in Staten Island is not used as a source of potable water.

AKRF reviewed the United States Fish and Wildlife Service National Wetlands Index (NWI) map for the area of the Site (https://www.fws.gov/wetlands/data/mapper.html) to determine whether the Site is located in a regulated wetlands area. Based on a review of the map, the Site is not located within or adjacent to a regulated wetland area. No suspected wetlands were observed during the Site inspection. A copy of the wetlands map is included in *Appendix D.*

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the Site area (Panel No. 3604970327F, effective date September 2007) was reviewed to assess whether the Site is located within a designated flood plain or flood zone. The Site is located in a Zone X area, which is defined by FEMA as an area located outside of the 500-year flood zone. A copy of the FEMA map for the Site area is included in *Appendix E*.

3.2.5 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

The New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to NYSDOH, 298 radon tests have been conducted in Richmond County in 2016: 236 tests in basements and 62 tests on ground floors. The average basement radon level was found to be 1.41 picoCuries per liter (pCi/L), and the average ground floor radon level was found to be 1.22 pCi/L. According to data presented in the regulatory agency database report (*Appendix I*), the average indoor radon level is 0.67 pCi/L in living areas and 1.25 pCi/L for basements in Richmond County, based on 61 tested locations. These results are below the United States Environmental Protection Agency (USEPA) Action Level of 4 pCi/L. As such, AKRF concludes that it is unlikely that elevated levels of radon gas are present at the Site.

4.0 ADJOINING AND SURROUNDING PROPERTIES

The general area around the Site consists of predominantly residential properties, with a Catholic High School Campus to the southwest and entrance ramps for the Verrazano-Narrows Bridge to the northeast. The following table summarizes the adjoining property uses:

Direction	Facility Name/Description	Street Address/Location	Current Use
North	Garson Avenue and Cleveland Avenue, followed by:	N/A	Public Street
	Residences	25 Garson Avenue and 11-31 Cleveland Place	Private dwellings
South	Knauth Place and Hastings Street, followed by:	N/A	Public Street
	Residences	15-40 Knauth Place, 6 Narrows Road South, 35 Landis Avenue, and 11-31 Hastings Street	Private Dwellings
East	Narrows Road South, followed by:	N/A	Public Street
	Staten Island Expressway	N/A	Public Highway
West	Landis Avenue, followed by:	N/A	Public Street
	St. Joseph Retreat Center, St. Joseph Academy High School, and Geller House School	850 Hylan Boulevard and 77 Chicago Avenue	Private School and facilities, and specialized public school
Northwest	Cleveland Alley, followed by:	N/A	Public Street
	Residences	326-348 Fingerboard Road	Private Dwellings

AKRF conducted a review of the surrounding properties to identify potential RECs and to determine whether any existing public schools are located within a two-block radius of the Site. No public schools were identified within this radius. However, two private schools, Geller House School (77 Chicago Avenue) and St. Joseph Hill Academy High School (850 Hylan Boulevard) were noted within one block of the Site. A groundwater monitoring well was noted in the Cleveland Place sidewalk adjacent to the parking lot on the northwestern portion of the Site.

The following change was noted from the most recent Fire Insurance map dated 2007: an addition to the north of the high school building, not shown on the 2007 map, was noted during the Site inspection.

The review of adjoining properties indicated evidence of the following RECs/VECs at the Site or in the surrounding area:

- A groundwater monitoring well observed during Site reconnaissance on the Cleveland Place sidewalk between the two Site lots.

5.0 HISTORICAL USE RESEARCH

5.1 Land Title Records and Tax Records

AKRF ordered a Chain of Title report for the Site from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Public deed records and tax records were reviewed from 1938 to the present for Block 3087, Lot 1. The current owner of the Site is listed as the Sisters of St. John the Baptist Inc. The records indicated that the Site was transferred from Mary Brunetta Paolicelli and Giacenta Poalicelli to the current owner the Sisters of St. John the Baptist Inc. in 1938. No other sale or lease records were identified.

A search of the NYC Department of Finance online database identified the following owner records for the Site:

- Block 3087 Lot 1: St. John Villa Academy
- Block 3089, Lot 89: Sisters of St. John the B.

The review of current and historical ownership and tax record information did not indicate evidence of RECs or VECs at the Site. A copy of the title search is included in *Appendix J.*

5.2 Historical USGS Topographic Quadrangles

AKRF reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the Site. The following table summarizes descriptions and interpretations from the historical USGS maps:

Year	Comments
1891: Staten Island Quadrangle 1:62,500	**Site:** The Site is a largely vacant parcel with a single small building in the northwest portion, sloping upward to the northeast from an elevation of approximately 90 to 130 feet. **Surrounding Properties:** The Site is located approximately 100 feet west of a rapid transit railroad, in a sparsely developed area. Military installations are shown in the vicinity of the Site (Fort Wadsworth is approximately 2,400 feet to the east, and Fort Tompkins is approximately 3,000 feet to the east). The shore of the Lower Bay is approximately 3,000 feet to the southeast of the Site. The area around the Site is sparsely developed.
1898: Staten Island Quadrangle 1:62,500	**Site:** A small road is shown leading to the structure in the northwest portion of the Site. No further significant changes from the 1891 map were noted. **Surrounding Properties:** Buildings were shown to the northwest of the Site. A small pond was shown approximately 200 feet north-northeast of the Site. Additional roads and sparse development were shown surrounding the Site.
1900: Staten Island Quadrangle 1:62,500	**Site:** No significant changes from the 1898 map were noted. **Surrounding Properties:** The surrounding area is similar to the 1898 map.
1905: Passaic Quadrangle 1:125,000	**Site:** The small building is not shown on the Site. **Surrounding Properties:** No buildings were shown on the map, the road network is similar to the 1898 map.
1925: Staten Island Quadrangle 1:62,500	**Site:** The Site appears similar to the 1900 map with a small structure in the northwest portion of the Site. **Surrounding Properties:** The surrounding area is similar to the 1900 map.

Year	Comments
1947: The Narrows and Jersey City Quadrangles 1:24,000	**Site:** The Site is labeled as St. John Academy with three structures. The topography of the Site is shown with structures at a crest at an elevation of approximately 130 feet, and the perimeter of the Site at approximately 120 feet. **Surrounding Properties:** Additional buildings are shown surrounding the Site. The small pond previously shown to the north-northeast is no longer shown. An unnamed road is located west-adjacent to the Site. St. Joseph Academy is located approximately 250 feet southwest of the Site. An "old tank" is shown approximately 0.3 mile northwest of the Site. A railroad is shown east-adjacent to the Site.
1955: The Narrows and Jersey City Quadrangles 1:24,000	**Site:** The Site is labeled as St. Johns Academy and is developed with seven small buildings and vacant land. The buildings appear different from those shown on the 1947 map. The map shows 10 foot elevation contours, relative to 20 foot contours on earlier maps. **Surrounding Properties:** St. Joseph's Home for the Aged is shown southwest of the Site, followed by St. Joseph's Hill Academy. Public Schools PS 39 and PS 34 are shown within 0.25 mile of the Site. The greater surrounding area is shaded pink, indicating unspecified urban development, and contains schools, churches and a hospital. Fort Wadsworth is labeled as a U.S. Military Reservation shown 0.25 mile to the east including vegetated land, stone ruins, and several buildings. Vegetated land is shown to the west and northwest. Grasmere Lake and Cameron Lake are shown approximately 0.5 mile west of the Site. The "old tank" shown on the 1947 map is no longer shown.
1966: The Narrows Quadrangle 1:24,000	**Site:** Six buildings are shown on the St. Johns Villa Academy Site; one building on the eastern border is no longer shown. The northeast area of the Site potentially has been filled in, as a small mound is shown. **Surrounding Properties:** Significant development is shown east of the Site, including the construction of an expressway (Interstate-278 or I-278), a toll gate, a breakwater, and the Verrazano-Narrows Bridge, located northeast adjacent to the Site at the nearest point. Railroad tracks are no longer shown. A building labeled "service facilities" (possibly associated with the bridge) is shown adjacent to the toll gate, approximately 500 feet east-southeast of the Site. St. Joseph's Home for the Aged and PS 34 are no longer shown. Additional structures have also been constructed within in the area surrounding the Site.
1981: The Narrows and Jersey City Quadrangles 1:24,000	**Site:** No significant changes from the 1966 map were noted. **Surrounding Properties:** I-278 has been widened in the area surrounding the toll gate. Additional development is shown northwest of the Site. The surrounding area is otherwise similar to the 1966 map.
1998: The Narrows Quadrangle 1:24,000	**Site:** No significant changes from the 1981 map were noted. **Surrounding Properties:** The surrounding area is similar to the 1981 map.
2013: The Narrows Quadrangle 1:24,000	**Site:** Site details are not shown. **Surrounding Properties:** Surrounding area details are not shown, but the surrounding area appears similar to the 1998 map.

*RECs/CRECs/HRECs/VECs, if found, are listed in **Bold** font*

Based on its distance from the Site the "old tank" shown on the 1947 map is not considered a REC/VEC. The review of the USGS Topographic Quadrangles indicated the following RECs/VECs:

- Potential buried debris associated with demolition of historical on-site buildings could include **underground storage tanks (USTs) and/or historical fill material** of unknown origin.
- **Railroad tracks** noted on the 1891 to 1955 maps east-adjacent to the Site.

- Potential **historical fill material** of unknown origin associated with the construction of the Staten Island Expressway in the northeastern portion of the Site.

Based on a review of the historical topographic maps, the Site was not located in an area of suspected former wetlands; thus, potential subsurface methane is not considered an environmental concern. Copies of the historical USGS topographic maps are included in *Appendix F*.

5.3 Historical Aerial Photographs

AKRF reviewed aerial photographs of the Site and surrounding areas provided by EDR to identify historical land uses that may have involved hazardous substances or petroleum products. These photographs ranged from 1924 to 2011. The following table summarizes descriptions and interpretations from the aerial photograph reviews:

Year	Comments
1924 1:500	**Site:** The Site appears to be developed with a few structures including the convent building in its present day location, and contains vegetated land in the northern portion. Due to the quality of the photograph, specific details are difficult to discern. **Surrounding Properties:** The areas north, south, and west of the Site are vegetated and sparsely developed. Northwest trending Railroad tracks are shown running east of the Site. Small structures whose purpose cannot be determined are shown approximately 100 feet west of the Site.
1940 1:500	**Site:** The Site appears to contain three structures that are presumed to be the existing chapel, convent, and elementary school buildings in the center, and two smaller buildings on the eastern portion of the Site. Two driveways are shown leading to the Site from Cleveland Place. The remainder of the Site appears to be cleared landscaped. **Surrounding Properties:** The area surrounding the Site is developed with small, likely residential structures, with vegetated land shown further east, west, and northwest of the Site. The railroad tracks are shown approximately 250 feet east of the Site at the nearest point.
1951 1:500	**Site:** No changes to the Site in comparison to the 1940 aerial photograph were noted. **Surrounding Properties:** Additional residential development is noted in the greater surrounding area. Disturbed land is shown on the west-adjacent parcel.
1954 1:500	**Site:** A new building is shown to the east-southeast of the existing buildings. No changes to the Site in comparison to the 1951 aerial photograph were noted. **Surrounding Properties** An increase in development is shown southwest of the Site. No further significant changes to the surrounding properties in comparison to the 1951 aerial photograph were noted.
1961 1:500	**Site:** The southern portion of the current High School building is shown. A building is shown on the east-central portion of the Site, it appears to be the current Child Development Center. Two small structures are shown south of the Annex Building. No further changes in comparison to the 1954 photograph were noted. **Surrounding Properties:** Construction is shown northeast-adjacent to the Site including apparent excavation and filling of material.
1966 1:500	**Site:** The pool is now shown on the eastern portion of the Site. No further changes to the Site in comparison to the 1961 aerial photograph were noted. **Surrounding Properties:** A multi-lane highway (I-278) runs northwest to southeast to the east of the Site, with entrance ramps and a toll way east of the Site. The rail tracks shown on the 1940-1961 photographs have been demolished due to highway construction. Additional residences are shown in the greater surrounding area. No further significant changes to the surrounding properties in comparison to the 1961 aerial photograph were noted.
1975 1:500	**Site:** The northwest portion of the Site is shown as a parking lot. No further changes to the Site in comparison to the 1966 aerial photograph were noted. **Surrounding Properties:** No significant changes to the surrounding properties in comparison to the

Year	Comments
	1966 aerial photograph were noted.
1984 1:500	**Site:** The Site appears to be developed with the existing buildings, with the addition of the gymnasium/auditorium building is shown in the southeastern portion of the Site. No further changes were noted in comparison to the 1975 aerial photograph. **Surrounding Properties:** An increase in development is noted northwest of the Site. No further significant changes to the surrounding properties in comparison to the 1975 photograph were noted.
1991 1:500	**Site:** No changes to the Site in comparison to the 1984 aerial photograph were noted. **Surrounding Properties:** No significant changes from the 1984 photograph were noted.
1995 1:500	**Site:** No changes to the Site in comparison to 1991 aerial photograph were noted. **Surrounding Properties:** No significant changes to the surrounding area were noted compared to the 1991 aerial photograph.
2006 1:500	**Site:** An addition on the High School is shown north of the original building shown on previous photographs. The Site appears to be developed with the existing layout. No further changes to the Site in comparison to the 1995 aerial photograph were noted. **Surrounding Properties:** The surrounding area appears generally similar to the 1995 photograph.
2009 1:500	**Site:** No changes to the Site in comparison to the 2006 aerial photograph were noted. **Surrounding Properties:** No changes to the surrounding properties in comparison to the 2006 aerial photograph were noted.
2011 1:500	**Site:** No changes to the Site in comparison to the 2009 aerial photograph were noted. **Surrounding Properties:** No changes to the surrounding properties in comparison to the 2009 aerial photograph were noted.

Notes: **See photographs in Appendix G for actual scale. RECs/CRECs/HRECs/VECs, if found, are listed in **Bold** font*

The review of aerial photographs indicated evidence of the following RECs/VECs at the Site or in the surrounding area:

- Potential **historical fill material** of unknown origin associated with the construction of the Staten Island Expressway in the northeastern portion of the Site.
- **Railroad tracks** noted on the 1924 to 1961 photographs running approximately 250 feet east of the Site.

These RECs were also identified based on review of the historic topographic maps. Copies of reproducible aerial photographs are included in *Appendix G*.

5.4 Historical Fire Insurance Maps (Sanborn Maps)

A search for historical fire insurance maps (Sanborn Maps) for the Site and adjoining properties was conducted by EDR. Specifically, Sanborn Maps from 1917, 1937, 1950, 1962, 1977, 1981, 1983, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006, and 2007 were reviewed. The following table presents descriptions and interpretations from the historical fire insurance map review:

Year	Comments
1917	**Site:** The Site is developed with a two-story boarding house labeled Clar Manor in the center, and a small structure in the southeast corner. McFarland Place (near the southern boundary), Glen Avenue (near the western boundary), and Cleveland Place (near the northwestern boundary) are shown traversing the Site. The remainder of the Site is vacant. **Surrounding Properties:** State Avenue is shown to the north of the Site, followed by a partially developed block with residences. Garfield Avenue is shown to the east of the Site, followed by a vacant undeveloped block. An unnamed street followed by vacant land and the **Staten Island Rapid Transit Tracks** is shown southeast of the Site. McFarland Place followed by a sparsely developed block with two residences and an auto house is shown to the south. Prospect Avenue followed by Barrett Manor is shown to the west. Cleveland Alley followed by residences and the Hebrew Orphan Asylum is shown to the northwest.
1937	**Site:** The Site is shown as St. John's Villa Academy including a Convent (in the former boarding house), Chapel, and School with construction noted between 1930 and 1937. Five vacant lots are shown at the eastern site boundary, and five small structures are shown on the eastern boundary at 341-343 Garfield including a dwelling, miscellaneous storage, a laundry and an auto house. McFarland Place is renamed Knauth Place, and Glen Avenue is renamed Elm Avenue. A small shed is shown in the southwest corner at the corner of Elm Avenue and Knauth Place. The remainder of the Site is vacant. No other significant changes were noted from the 1917 map. **Surrounding Properties:** State Avenue is renamed Garson Avenue and Prospect Avenue is renamed Landis Avenue. Additional residences are shown to the north, east, and south of the Site. Barrett Manor is no longer shown to the west of the Site, and buildings associated with an academy are shown approximately 375 feet southwest of the Site.
1950	**Site:** Four of the vacant lots fronting Garfield Avenue on the eastern portion of the Site are no longer shown, the remaining lot is in the northeast corner of the Site at the corner of Garson Avenue. The small structures at 341-343 Garfield Avenue are no longer shown and have been replaced with a dormitory with laundry, a dwelling, and two storage structures. A small structure is shown in the southeast corner. A 6" water pipe leading to a fire hydrant is shown on the Site running from Garfield Avenue toward the Convent and School. The convent, chapel, and school appear similar to the 1937 map. No other significant changes were noted from the 1937 map. **Surrounding Properties:** Some small accessory structures were shown on the southwest-adjoining block including a tool shed and two water closets. The surrounding area appears similar to the 1937 map with some additional structures and dwellings.
1962	**Site:** A high school is shown on the western portion of the Site fronting Landis Avenue, it is noted that the high school was constructed in 1956. Elm Avenue no longer traverses the Site. Classrooms replace the dormitory in the laundry building, and additional classrooms are shown on the eastern portion of the Site near the dwellings. The storage building in the southeastern portion of the Site has expanded and contains auto garage and storage. These buildings are consistent with the existing Annex Building, Child Development Center, and Garage. No other significant changes were noted from the 1950 map. **Surrounding Properties:** The block east of the Site is vacant. The railroad tracks are labeled "not in operation." The remaining surrounding area appears similar to the 1950 map with some additional structures and dwellings.
1977	**Site:** The Site appears similar to the 1962 map, with two additional small unnamed structures shown in the southern portion of the Site. The vacant lot in the northeastern portion of the Site is no longer demarcated. **Surrounding Properties:** The Staten Island Expressway is shown to the east and northeast, with interchange ramps east-adjacent to the Site, and the Staten Island Rapid Transit railroad tracks are no longer shown. The remaining surrounding area appears similar to the 1962 map.
1981	**Site:** The Site appears similar to the 1977 map. **Surrounding Properties:** No significant changes were noted from the 1977 map.
1983	**Site:** The Site appears similar to the 1981 map. **Surrounding Properties:** No significant changes were noted from the 1981 map.

Year	Comments
1986	**Site:** A gymnasium is shown in the southwestern portion of the Site in its current configuration and is noted as constructed in 1983. Knauth Place is no longer shown traversing the Site. **Surrounding Properties:** No significant changes were noted from the 1983 map.
1987	**Site:** Elm Avenue is shown extending to the Site near the High School and Chapel from Cleveland place. No other significant changes were noted from the 1986 map. **Surrounding Properties:** No significant changes were noted from the 1986 map.
1988	**Site:** The Site appears similar to the 1987 map. **Surrounding Properties:** No significant changes were noted from the 1987 map.
1989	**Site:** The Site appears similar to the 1988 map. **Surrounding Properties:** No significant changes were noted from the 1988 map.
1990	**Site:** Elm Avenue is no longer shown extending onto the Site. No other significant changes were noted from the 1989 map. **Surrounding Properties:** No significant changes were noted from the 1989 map.
1991	**Site:** The Site appears similar to the 1990 map. **Surrounding Properties:** No significant changes were noted from the 1990 map.
1992	**Site:** The Site appears similar to the 1991 map. **Surrounding Properties:** No significant changes were noted from the 1991 map.
1993	**Site:** The Site appears similar to the 1992 map. **Surrounding Properties:** No significant changes were noted from the 1992 map.
1994	**Site:** The Site appears similar to the 1993 map. **Surrounding Properties:** No significant changes were noted from the 1993 map.
1995	**Site:** The Site appears similar to the 1994 map. **Surrounding Properties:** No significant changes were noted from the 1994 map.
1996	**Site:** The Site appears similar to the 1954 map. **Surrounding Properties:** No significant changes were noted from the 1995 map.
2001	**Site:** The Site appears similar to the 1996 map. **Surrounding Properties:** New residential development is shown southeast of the Site, beyond Hastings Street.
2002	**Site:** The current parking lot is labeled "parking" on the northern portion and "playground" on the southern portion. The Site otherwise appears similar to the 2001 map. **Surrounding Properties:** A playground is shown west of the Site across Landis Avenue. No further significant changes were noted from the 2001 map.
2003	**Site:** The Site appears similar to the 2002 map. **Surrounding Properties:** No significant changes were noted from the 2002 map.
2004	**Site:** The Site appears similar to the 2003 map. **Surrounding Properties:** No significant changes were noted from the 2003 map.
2005	**Site:** The Site appears similar to the 2004 map. **Surrounding Properties:** No significant changes were noted from the 2004 map.
2006	**Site:** The Site appears similar to the 2005 map. **Surrounding Properties:** No significant changes were noted from the 2005 map.
2007	**Site:** The Site appears similar to the 2006 map. **Surrounding Properties:** No significant changes were noted from the 2006 map.

*Note: RECs/CRECs/HRECs/VECs, if found, are listed in **bold** font.*

The review of fire insurance maps indicated evidence of the following RECs/VECs:

- Small structures and road beds were present throughout the Site prior to construction of the current buildings. **Potential buried demolition debris/fill material and/or suspect tanks** could be present beneath the Site from the former on-site structures.

- Railroad tracks for the **Staten Island Rapid Transit** were present approximately 250 feet east of the Site between 1917 and 1962 east-adjacent to the Site.

A copy of the Historical Fire Insurance Map report is included in *Appendix H*.

5.5 City Directories

A search for historical city directories was conducted by EDR using the addresses 57-61 Cleveland Place, 26 Landis Avenue, and 8 Narrows Road South. The following table presents descriptions and interpretations from the search:

Year	Comments
1928	**Site:** Not listed. **Surrounding Properties:** Residential
1934	**Site:** St. Johns Villa Academy, St George Hotel (51 Cleveland Place) **Surrounding Properties:** Lakeview Home(77 Chicago Avenue), Orphanage, , Residential
1960	**Site:** St. John Villa Academy **Surrounding Properties:** Lakeview Home (77 Chicago Avenue), Residential
1965	**Site:** St. John Villa Academy **Surrounding Properties:** Lakeview Home (77 Chicago Avenue), Residential
1970	**Site:** St. John Villa Academy **Surrounding Properties:** Residential
1975	**Site:** St. John Villa Academy **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
1979	**Site:** St. John Villa Academy **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
1984	**Site:** St. John Villa Academy **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
1990	**Site:** St. John Villa Academy **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
1995	**Site:** Convent, Elementary School, St. John Villa Academy **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
2000	**Site:** St. John Villa Academy **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
2005	**Site:** HSale 3 M AO, Mcloughlin E M Av, St. John Villa Academy Elementary School **Surrounding Properties:** Residential, Jewish Family and Child Services, Geller House (77 Chicago Avenue)
2008	**Site:** Not Listed. **Surrounding Properties:**
2010	**Site:** Sisters of St. John the Baptist Inc., St. John Villa Academy High School (26 Landis Avenue) **Surrounding Properties:** Jewish Family and Child Services, , Hawthorne-Cedar Knolls Union (77 Chicago Avenue), Frank Trmbetta Sons Construction Corp (348 Fingerboard Rd), Vincent's Home Maintenance Inc (378 Fingerboard Road), Commercial
2014	**Site:** Sisters of St. John the Baptist Inc. **Surrounding Properties:** Jewish Family and Child Services, Frank Trmbetta Sons Construction Corp (348 Fingerboard Rd), Hawthorne-Cedar Knolls Union (77 Chicago Avenue), Commercial

The review of city directories did not identify any RECs/VECs.

A copy of the city directory search is included in *Appendix J*.

5.6 Prior Reports

No prior reports were provided to AKRF for review.

5.7 Other Historical Sources

Computerized NYCDOB records (summarized in Section 6.2) were reviewed for evidence of historical Site work or Site occupation with the potential to have impacted environmental conditions. No records of environmental concern were identified on the NYCDOB Database.

AKRF reviewed electronic block and lot information for the Site on PropertyShark.com (Property Shark). This website contains information including past and present ownership, selected tax records, NYCDOB files including building permits, and environmental hazards compiled by Toxics Targeting, Inc. of Ithaca, New York. The Property Shark website indicated toxic site listings on the Site lot. Of these, two spills, one tank test failure, and one PBS listing are considered RECs/VECs (as detailed in Section 6.1). The report did not indicate any toxic site listings adjacent to the Site. A copy of the Property Shark report is included in Appendix J.

5.8 Historical Use Interviews

Mr. Bustamante, the Facilities Manager of the Site since approximately 1999, indicated that the Site has been occupied by St. John Villa Academy since that time.

5.9 Historical Use Summary

The following table summarizes the findings of the research pertaining to historical Site usage:

YEARS	HISTORICAL USES		SOURCE(S)	COMMENTS
	Site	Surrounding Property		
1891-1929	A small building (Clar Manor Boarding House, current Convent) and vacant land.	Sparse residential development. Military uses (Fort Wadsworth and Fort Tompkins) shown east of the Site on the USGS maps. Staten Island Rapid Transit railroad tracks shown east and southeast of the Site.	Historical USGS topographic maps, Sanborn maps.	The 1891 USGS map is the oldest map noted for the Site. Identified RECs/VECs: potential **USTs and/or fill materials** associated with demolition of a historic building on-site; contamination from railroad operations, may have migrated onto the Site from the **Staten Island Rapid Transit.**

YEARS	HISTORICAL USES		SOURCE(S)	COMMENTS
	Site	Surrounding Property		
1930-1955	St. John Villa Academy including Convent, Chapel (constructed 1937), and School (constructed 1930), some small accessory buildings on perimeter of the Site.	Additional residential and some commercial development in the surrounding area.	Historical USGS topographic maps, Sanborn maps, and Aerial Photographs.	Identified RECs/VECs: potential **USTs and/or fill materials** associated with demolition of historic buildings on-site.
1956-1982	The existing High School building was added to the Site, smaller accessory structures on the eastern boundary no longer shown. The existing Annex Building, Child Development Center, and Garage were shown by 1962.	Additional residential development in the surrounding area. The Staten Island Expressway and Verrazano-Narrows bridge is built approximately 500 feet south of the Site by 1966. The railroad tracks are no longer present to the east of the Site.	Historical USGS topographic maps, aerial photographs, Sanborn maps.	Identified RECs/VECs: potential **USTs and/or fill materials** associated with demolition of historic buildings on-site; Fill materials from highway construction may have been deposited on-site.
1983-present	Existing campus and grounds layout, with gymnasium constructed in 1983.	Residential and educational uses in the surrounding area.	Historical USGS topographic maps, aerial photographs, City Directories, Sanborn Maps.	Identified RECs/VECs: potential **USTs and/or fill materials** associated with demolition of historic buildings on-site.

The review of historical records identified the following RECs/VECs:

- Potential **USTs and/or fill materials** associated with demolition of historic buildings on-site.
- Potential for contamination from track ballast, railroad ties, track maintenance operations, transformers, etc. may have migrated onto the Site from the **Staten Island Rapid Transit** tracks**.**
- **Fill materials** from highway construction may have been deposited on-site.

6.0 REGULATORY AGENCY RECORD REVIEWS

The database search results discussed in this section, provided by EDR of Milford, Connecticut, were reviewed for information regarding documented and/or suspected releases of regulated hazardous substances and/or petroleum products on or near the Site. AKRF also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that cannot be plotted with confidence, but are identified as being located within the general vicinity of the Site based on a partial street address. In general, the listing cannot be mapped due to inaccurate or incomplete address information provided to the corresponding regulatory agency. Any listings from the unmappable summary identified by AKRF as a result of the Site reconnaissance and/or cross-referencing to mapped listings are included in the corresponding database discussion within this section.

6.1 Federal and State Regulatory Agency Database Reviews

A review of federal and state records for the Site was accomplished by contacting offices of federal and state regulatory agencies and reviewing listings compiled in the regulatory agency database report (*Appendix I*). The results of the review of the federal and state records are presented below. Copies of the correspondence are included in *Appendix K*.

United States Environmental Protection Agency (USEPA)
The USEPA is responsible for the research, development and enforcement of national environmental regulations. Certain regulatory programs are deferred by the USEPA to state or tribal entities issuing permits and enforcing compliance. The USEPA Region 2 covers New York, New Jersey, Puerto Rico, US Virgin Islands and seven tribal nations within the region. As directed by EPA personnel (FOIA Specialist) from the Public Outreach Branch, USEPA Region 2, AKRF performed an electronic records search for St. John Villa's addresses on the USEPA FRS Facility Query electronic information search engine. No facilities were identified for the Site address or in the immediate surrounding area.

New York State Department of Environmental Conservation (NYSDEC)
The NYSDEC is responsible for the implementation and enforcement of state-mandated environmental regulations to protect the public health and safety. The NYSDEC Region 2 covers New York City. A FOIL request was submitted to the NYSDEC Region 2 via e-mail on April 14, 2017 to determine whether the agency holds records pertaining to the Site. As of the date of this report, NYSDEC has not responded to the FOIL request. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

New York State Department of Health (NYSDOH)
The NYSDOH Bureau of Environmental Exposure Investigation is responsible for investigating the potential for human exposure from environmental contamination, primarily at inactive hazardous waste sites. Activities include water sampling and treatment; dump site, construction site, and spill investigations; and emergency event investigations. For every state, federal Superfund, Brownfield, and voluntary clean-up site, a bureau specialist is assigned to coordinate and communicate health-related activities. A FOIL request was submitted to the NYSDOH via e-mail on April 14, 2017 to determine whether the agency holds records pertaining to the Site. As of the date of this report, NYSDOH has not responded to the FOIL request. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

A summary of sites identified through review of the federal and state regulatory agency databases is provided in the following table:

Federal and State List	Last Updated	Search Radius*	No. of Sites within Search Radius	Site Appears on List	RECs Identified
National Priorities List for Federal Superfund Cleanup (NPL)	12/05/16	1 mile	0	No	No
Delisted NPL Site List	12/05/16	1 mile	0	No	No
Superfund Enterprise Management System (SEMS), including No Further Remedial Action Planned listings (SEMS-ARCHIVE)	10/10/16	½ mile ½ mile	0 0	No No	No No
Resource Conservation and Recovery Information System (RCRIS) – Corrective Action Activity (CORRACTS) and Non-CORRACTS Treatment, Storage, or Disposal Facilities (RCRIS-TSD)	12/12/16 12/12/16	1 mile ½ mile	0 0	No No	No No
Resource Conservation and Recovery Information System Generators/Transporters (RCRIS Gen/Trans)	12/12/16	¼ mile	3 (+6 Non-Generators)	No	No
Federal Institutional Control/Engineering Control Registries	11/15/15	½ mile	0	No	No
Emergency Response Notification System (ERNS)	09/26/16	Site	0	No	No
Toxic Release Inventory System (TRIS)	12/31/14	¼ mile	0	No	No
New York State Inactive Hazardous Waste Disposal Site (SHWS)	11/14/16	1 mile	2	No	No
Hazardous Substance Waste Disposal Site Inventory (HSWDS)	01/01/03	½ mile	1	No	No
Solid Waste Management Facilities Sites (SWF/LF)	01/04/17	½ mile	0	No	No
Vapor Reopened	06/01/16	1 mile	0	No	No
New York State Spills Information (NY Spills)/Leaking Underground Storage Tanks (LTANKS)	02/06/17	½ mile	99/16	**Yes**	**Yes**
Petroleum Bulk Storage Tanks (AST/UST)	12/28/16	¼ mile	3/2	**Yes**	**Yes**
Chemical Bulk Storage Tanks (CBS UST/CBS AST)	12/28/16	¼ mile ¼ mile	0/1	No No	No No
State Voluntary and Brownfield Cleanup Program Sites (VCP/Brownfields)	11/14/16	1 mile	2/1	No	No
Registered Dry Cleaners	10/27/16	½ mile	2	No	No
Manufactured Gas Plant Sites (Coal Gas)	N/A	1 mile	0	No	No
E-Designation Sites	11/08/16	¼ mile	0	No	No
EDR US Historic Auto Stations	N/A	¼ mile	0	No	No
EDR US Historic Cleaners	NA	½ mile	9	No	No

*The surrounding area search radius indicates the radial area (measured from perimeter of the Site) for which the database review was performed.

As the summary table indicates, the Site is listed in the AST, UST, FINDS, and LTANKs databases. The following subsections provide a discussion of the listings for the Site and surrounding properties, which have been identified within the search radius and are listed in the previous table.

National Priority List (NPL) – Environmental Protection Agency Superfund
The NPL is a subset of the CERCLIS, and lists properties that are ranked as high priority for cleanup under the federal Superfund program. Neither the Site nor any other facilities within one mile of the Site are listed in the NPL database.

Delisted NPL Site List
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria the USEPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL when no further response is appropriate. Neither the Site nor any other facilities within one mile of the Site are listed in the delisted NPL database.

Superfund Enterprise Management System (SEMS)
The SEMS list, formerly known as the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list, is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA, but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP), currently known as Superfund Enterprise Management System Archive (SEMS-ARCHIVE) sites, are also included in this database. Neither the Site nor any other facilities within one-half mile of the Site are listed in the SEMS database.

Resource Conservation and Recovery Information System - Treatment, Storage, or Disposal Facilities (RCRIS-TSD)/RCRIS Corrective Action Activity (CORRACTS)
The Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRIS database tracks facilities that treat, store, and/or dispose of hazardous waste as defined by RCRA (referred to as TSD facilities). The RCRIS CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Site nor any other facilities within the specific search radii of the Site are listed in the RCRIS-TSD or RCRA CORRACTS databases.

RCRIS Generators/Transporters (RCRIS Gen/Trans)
This list includes any operation that generates or transports hazardous waste and must obtain a hazardous waste generator identification number or transporter permit. The database identified three registered RCRA hazardous waste generator facilities and six additional non-generator facilities within one-quarter mile of the Site. Based on their distance (over 475 feet away and hydraulically crossgradient) and the nature of the listings, none of the RCRA sites are considered RECs/VECs.

Federal Institutional Control/ Engineering Control Registries
These registries are listings of sites with engineering and/or institutional controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining at a site. Deed restrictions are generally required as part of the institutional controls. Neither the Site nor any other facilities within one-half mile of the Site are listed in the Federal Institutional Control/Engineering Control Registries.

Emergency Response Notification System (ERNS)
The ERNS is a national database used to collect information on reported releases of oil and hazardous substances. The Site is not listed in the ERNS database.

Toxic Release Inventory System (TRIS)
TRIS identifies facilities which release toxic chemicals to the air, water, and land in reportable quantities under Superfund Amendments and Reauthorization Act (SARA) Title III Section 313. Neither the Site nor any other facilities with a one-quarter mile radius of the Site are listed in the TRIS database.

New York State Inactive Hazardous Waste Disposal Site (SHWS)

The SHWS database, compiled by the NYSDEC, maintains information regarding the investigation and cleanup of suspected hazardous waste sites. Two SHWS facilities were listed within a one-mile radius of the Site. Based on distance from the Site, assumed hydraulic relationship, and/or listing details, neither of the facilities listed are expected to have affected the Site subsurface.

Hazardous Substance Waste Disposal Site Inventory (HSWDS)
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites. The sites on the list will not automatically be made Superfund sites; rather, each site will be further evaluated for listing on the Registry. One facility within a one-half mile radius of the Site is listed in the HSWDS database. The listing was associated with the removal of hazardous waste from Fort Wadsworth located over one-quarter mile east of the Site, and is not considered a REC/VEC due to its downgradient location - the listing is likely mapped incorrectly.

Solid Waste Management Facilities (SWF/LF)
The SWF/LF database is a comprehensive listing of state permitted/recorded solid waste management facilities. The Site is not listed in the SWF/LF database. No SWF/LF facilities were listed within a one-half mile radius of the Site.

New York State Spills Information Database (NY Spills)/Leaking Storage Tanks Incidents Report (LTANKs)
The NY Spills database including LTANKS sites was researched to identify listings within one-half mile of the Site. The Site is listed in the Spills/LTANKS database. The database identified an additional 114 reported NY Spills/LTANKS incidents within a one-half mile radius of the Site. The following table identifies the Spills/LTANKS listings that are considered RECs/VECs given the listing details:

Listing	Distance/ Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
St. John Villa Academy 57 Cleveland Place	Site	N/A	A4	Spill No. 9005671 was reported in May 1990 due to a tank overfill. Spill 0612683 was reported in 2007 due to a tank test failure. According to the listing details the tank was pumped out, lines were exposed and no contamination was found. Both spills are closed. The Site is also listed in the PBS database.

Based on distance from the Site, assumed hydraulic relationship, and/or listing details, none of the off-site facilities identified in the NY Spills/LTANKs database are expected to represent RECs/VECs.

Petroleum Bulk Storage Tanks (USTs/ASTs)

The NYSDEC petroleum bulk storage (PBS) tank databases were researched to identify listings for the Site and surrounding properties located up to one-half mile from the Site. The Site is listed in the PBS database. The database identified an additional two facilities are listed in the PBS database. The following table identifies the PBS database listings that are considered RECs/VECs given the listing details:

Listing	Distance/ Direction	Assumed Hydraulic Gradient	Map ID Number	Regulatory Site ID/Status/Available Data
St. John Villa Academy 57 Cleveland Place	Site	N/A	A2	Facility ID 2-092401 is listed with: one 275-gallon in service #2 fuel oil AST (installed in 1983), two in-service 2,000-gallon #2 fuel oil USTs (one installed in 1965 and one installed in 1980) and one in-service 5,000-gallon #2 fuel oil UST (installed 1956). These PBS listings are considered RECs/VECs. The Site is also listed in the LTANKs database.
Geller House 77 Chicago Avenue	west-adjacent	Upgradient	B6	Facility ID 2-360856 is listed as an active PBS facility with an in-service 2,000-gallon #2 Fuel Oil UST.

Based on distance from the Site, assumed hydraulic relationship, and/or listing details, the remaining facility is not expected to impact the environmental integrity of the Site.

Chemical Bulk Storage Tanks (CBS UST/CBS AST)

The NYSDEC chemical bulk storage (CBS) tank databases were researched to identify listings for the Site and properties within the search radius of one-quarter mile. The Site was not listed in the CBS database. One facility within a one-quarter mile from the Site is listed in the CBS AST tank database. The Hills of Grasmere Hoa located at 49 Claradon Lane, approximately 700 feet northwest of the Site is listed for an in-service 500-gallon sodium hypochlorite tank. No violations were reported. Based on the listing details, this facility is not considered a REC/VEC.

New York State Voluntary and Brownfields Cleanup Programs (VCP/BCP)

The NYSDEC Voluntary and Brownfields Cleanup Programs database was researched to identify listings for the site and within a one-mile radius of the Site. The Site is not listed in the VCP or BCP databases. Two facilities located within a one-mile radius are listed in the VCP database, and one in the BCP database. Based on distances from the Site (over 4,600 feet), these facilities have not affected the Site subsurface.

Registered Dry Cleaners and EDR Historic Cleaners

The registered dry cleaners and EDR Historic Cleaners databases were researched to identify listings within one-half mile of the Site. The Site is not listed in the Registered Drycleaners or EDR Historic Cleaners databases. The regulatory agency database search identified nine EDR Historic Cleaners and two Registered Drycleaners within one-half mile of the Site. Based on distance from the Site and assumed hydraulic relationship, none of these listings are likely to affect the Site subsurface.

Manufactured Gas Plant Sites (Coal Gas)
The EDR manufactured gas plant database was researched to identify listings for the Site and within a one-mile radius of the Site. Neither the Site nor any facilities located within one mile of the Site are listed in the manufactured gas plant database.

EDR Historic Auto Sites
The EDR historic auto database was researched to identify listings within a one-quarter mile radius of the Site. Neither the Site nor any facilities located with one-mile from the Site are listed in the EDR Historic Auto Sites database.

6.2 Local Regulatory Agency Research

A review of local records for the Site was accomplished by contacting offices of New York City regulatory agencies. The results of the review of local records are presented below. Copies of the correspondence are included in *Appendix K*.

New York City Department of Buildings (NYCDOB)

NYCDOB records for the Site were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes or petroleum products at the Site. The following records were identified:

- Eight buildings were listed on-site, with addresses including 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, 57 Cleveland Place, and 18 Hastings Street

61 Cleveland Place
- A 1984 Certificate of Occupancy (C of O) for a three-story school building with basement

8 Narrows Road South
- A 1987 C of O for a one-story (with mezzanine) building with a gym, locker room, kitchen, teacher rooms, and heating in the cellar, for the building located at 8 Narrows Road South

25 Landis Avenue
- A 1964 C of O for a one-story school building with basement including classrooms, a kitchen, and a cafeteria for the building located at 25 Landis Avenue
- A 2006 C of O for a two story school with basement.
- A 2006 permit for a horizontal and vertical enlargement including a three-story annex

57 Cleveland Place
- A 1935 C of O for a three story school building with basement including auditorium
- A 1984 C of O for a two story school building, with chapel, bedrooms, and a basement including a recreation room, lounge, dining room and kitchen, with a boiler room in the sub-basement
- A 1960 C of O for a one story (on-ground) kindergarten
- A 1995 Fuel Oil application to replace two boilers, two oil burners, and change grade of fuel from #4 to #2
- A 2005 Permit to replace the boiler and oil burner

No records were identified for Block 3089, Lot 59. A Building Permit Report provided by EDR also identified records including alterations, plumbing and electrical work, and replacing oil burners as summarized above. A copy of the Building Permit Report is included in *Appendix J*.

New York City Fire Department (FDNY)

The FDNY is responsible for the enforcement of local fire codes pertaining to the use and storage of flammable and hazardous materials. FDNY information concerning USTs, sealed or removed USTs, and history of leaks at the Site was requested in a record search form dated April 14, 2017. As of the date of this report, the FDNY has not responded to the FOIL request. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

New York City Department of Health and Mental Hygiene (NYCDOHMH)

The NYCDOHMH Bureau of Environmental Investigations (BEI) maintains files of health related environmental incidents in the City of New York. These incidents may include spills of hazardous chemicals, citizen complaints regarding asbestos issues, or reports of chemical odors or fumes. NYCDOHMH information concerning the Site was requested in a letter dated April 14, 2017. As of the date of this report, the NYCDOHMH has not responded to the FOIL request. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

New York City Department of Environmental Protection (NYCDEP)

The NYCDEP maintains files of incidents involving environmentally regulated materials. The records maintained by NYCDEP include reports of spills of hazardous chemicals and citizen complaints on environmental issues. NYCDEP information concerning the Site was requested in a form dated April 14, 2017. As of the date of this report, NYCDEP has not responded to the FOIL request. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

7.0 USER RESPONSIBILITIES

7.1 Environmental Liens or Activity and Use Limitations

An Environmental Lien search was performed by EDR on April 20, 2017. The lien search indicated that no environmental liens or other activity and use limitations (AULs) were reported for the Site, and the current Site owner was listed as Sisters of St. John the Baptist Inc. A copy of the Environmental Lien search is included in *Appendix J*.

7.2 Valuation Reduction for Environmental Issues

The Site is owned by Sisters of St. John the Baptist Inc. No information was available at the time of the assessment regarding the relationship of the purchase price of the property to the fair market value of the property. If information is received regarding valuation reduction for environmental issues that changes the conclusions or recommendations presented in this Report, an addendum will be submitted to the NYCSCA.

7.3 Specialized Knowledge or Experience of the User

No information was available at the time of the assessment regarding any specialized NYCSCA knowledge or experience that is material to RECs/VECs in connection with the Site.

7.4 Commonly Known or Reasonably Ascertainable Information

No information was available at the time of the assessment regarding any commonly known or reasonably ascertainable information within the local community about the property that is material to RECs/VECs in connection with the Site.

7.5 The Degree of Obviousness of the Presence or Likely Presence of Contamination At The Property

No information was available at the time of the assessment regarding any obvious indicators that point to the presence or likely presence of releases at the Site.

8.0 SITE RECONNAISSANCE AND INTERVIEWS

8.1 Methodology and Limiting Conditions

The inspection of the Site included observations of the Site and surrounding area (Site reconnaissance) to identify potential sources or indications of hazardous substances, including: ASTs; USTs; tank vents and fill ports; transformers and other items that could contain PCBs; waste storage areas; hazardous materials usage, storage, and disposal; stained surfaces and soils; stressed vegetation; leaks; and, odors. In addition, readily-observable portions of the properties immediately adjacent to the Site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.

8.2 Site Reconnaissance

Visual inspection of the Site and surrounding area was performed on April 18, 2017 by Ms. Amy Jordan of AKRF, accompanied by Mr. Robert Bustamante, the Facilities Manager at the Site, Mr. Bill O'Connor of Parish Property Management, Inc., Mr. Mathew Mankovich of NYCSCA, and other members of the NYCSCA team. At the time of the inspection, the weather was clear and approximately 65 ºF, and visibility was not obscured by weather conditions. Photographs taken during the reconnaissance are provided in Appendix C.

The Site is located at 57-61 Cleveland Place in Staten Island, New York and is also identified as New York City Tax Block 3087, Lot 1 and Tax Block 3089, Lot 59. The Site consists of an approximately 7.2-acre property developed with eight buildings: a 3-story elementary school with a basement and a partial cellar, a two-story convent with a cellar, a 4-story chapel with a cellar, a 2- to 3-story high school, a 1- to 2-story gymnasium, a 2-story annex, a 1-story child development center, and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a pool with a pool shed. The Site is bounded to the north by Garson Avenue, followed by residences; to the east by Narrows Road South followed by the Staten Island Expressway; to the southeast by Hastings Street, followed by residences; to the south by Knauth Place, followed by residences; to the west by Landis Avenue followed by St. Joseph Academy and Retreat Center; and to the northwest by Cleveland Alley, followed by residences.

Elementary School Building

The elementary school building is an approximately 24,600-square foot, three-story brick building with a basement and a partial cellar located on the central portion of the Site. The building contains a boiler room and storage in the partial cellar; classrooms, offices, and restrooms on the first floor; classrooms and restrooms on the second and third floors; and a partial attic above the roof. The attic contains storage for classroom supplies. The basement contains an auditorium/cafeteria, restrooms closets, a stage, and a small prep/warming kitchen. A tunnel is located at the southeastern portion of the building basement connecting it to the chapel. The roof is constructed of modified bitumen noted to be in good condition. The building is illuminated by fluorescent lights and is not served by elevators.

The partial cellar located beneath the northwestern portion of the building contains one oil-fired boiler, a sump pit, and a storage room. According to Mr. Bustamante, the sump pit is used for boiler cleaning only and otherwise remains dry and unused. The building is cooled via window-mounted units. A PBS registration for one 5,000-gallon and two 2,000-gallon fuel oil USTs, and one 275-gallon fuel oil AST was observed in the boiler room and identified the last testing date as March 1992 and a test due date of March 1997. A fill port and a vent pipe were observed in the asphalt northeast-adjacent to the elementary

school building. A sign on the building façade identified a 2,000-gallon No. 2 fuel oil UST. Mr. Bustamante indicated the tank previously used No. 4 fuel oil and that a tightness test was recently performed, but could not provide further details. Vent pipes and fill ports for the other tanks listed on the PBS registration were noted at the chapel building, annex building and child development center, as described below.

Interior finishing materials include plaster and drop-tile ceilings; painted block, wooden, gypsum board, and ceramic-tiled walls; and concrete, wooden, carpeted, and ceramic and vinyl tile floors, which were observed to be generally in good condition, with the exception of some cracked vinyl floor tiles and damaged plaster walls in the attic.

Minor evidence of water damage was observed in a third floor classroom. Mr. Bustamante indicated that minor leaks occur in the building and are repaired on an as-needed basis. Insulation on piping in the boiler room was noted to be in good to poor condition. Chemical storage noted in the building included cleaning chemicals in the slop sink closets and in the partial cellar in containers up to one gallon in size, which were neatly stored and labeled with no evidence of a release. No odors or staining were noted in the building.

High School Building

The high school building is an approximately 42,000-square foot two- and three-story brick, block, and glass building located on the southwestern portion of the Site. Corner stones on the building indicated construction dates of 1956 and 2005 for the southern portion of the building and the northern addition, respectively. The first floor contains classrooms, offices, restrooms, a cafeteria, a kitchen, and closets/mechanical spaces; and the second floor contained classrooms, offices, and restrooms. The third floor on the northern portion of the building contained classrooms and restrooms. The roof was constructed of bitumen noted to be in fair to good condition. The building is heated and cooled by roof-mounted air exchange equipment, is illuminated by fluorescent lights, and is served by one hydraulic elevator. A hydraulic oil-like odor was detected in the ground-floor elevator room, but no evidence of a leak or staining was observed.

During reconnaissance, evidence of water damage was observed throughout the first floor of the addition. Evidence of mold remediation was observed on the ground floor of the addition, including drywall removal and dehumidifiers. According to Mr. O'Connor, the first floor of the new (addition) portion of the high school building has been vacant since it was inundated with water during Hurricane Sandy in October 2012. Mr. O'Connor indicated that the mold was remediated, but the project is under litigation and, therefore, remains in its current state.

Interior finishing materials include drop-tile ceilings; block, gypsum board, and ceramic-tiled walls; and ceramic, vinyl tile, and laminated floors, which were observed to be generally in good condition, with the exception of some cut gypsum walls and damaged vinyl floor tiles in the ground floor space of the addition at the locations of the water/mold damage.

Chemical storage noted in the building included cleaning chemicals in the slop sink closets in containers up to one gallon in size and laboratory chemicals in flammable storage cabinets and on shelving in a science room. The chemicals were observed to be neatly stored and labeled with no evidence of a release. Mr. Bustamante indicated that disposal of the chemicals is handled by a private hauler on an as-needed basis.

A concrete-paved courtyard is located between the original building and the addition. A sewer ejector pit is located north of the addition along Chicago Avenue and a hydraulic trash compactor was observed east of the building. A 55-gallon drum was observed nearby the compactor; however, its contents were unknown.

Convent Building

The convent is an approximately 14,500-square foot, two-story brick building located on the central portion of the Site. It is connected to the chapel and elementary school buildings via underground passageways. The building contains storage, kitchen, restroom, laundry, and living spaces in the cellar (which was shared with the adjoining chapel building); and offices, living spaces, and restrooms on the first floor. The second floor was not inspected due to privacy concerns, but reportedly contains bedrooms and bathrooms. The basement contained an auditorium/cafeteria, restrooms closets, a stage, and a small prep/warming kitchen. A tunnel is located at the southeastern portion of the building basement connecting it to the chapel building. The roof was observed only from the exterior of the building but appeared to be constructed of bitumen shingles and in good condition.

According to Mr. Bustamante, the building is heated by an oil-fired boiler located east-adjacent to the elementary school building and cooled via window-mounted units. The building is illuminated by fluorescent lights and is not served by elevators.

Interior finishing materials include plaster and drop-tile ceilings; wooden, gypsum board, and marble- and ceramic-tiled walls; and concrete, wooden, carpeted, and ceramic and vinyl tile floors, which were observed to be generally in good condition. No evidence of chemical storage, odors, or staining was noted in the building.

Chapel Building

The chapel is an approximately 20,700-square foot, four-story brick building located on the central portion of the Site. It contains storage, a kitchen, restrooms, and living spaces in the cellar (which was shared with the adjoining convent building); and the first floor contained a chapel and meeting rooms. The remainder of the building was inaccessible due to privacy concerns, but reportedly contained restrooms, bedrooms, and living spaces. The boiler room contains three oil burning boilers, used for heating the building. A petrometer and an oil burner switch were also observed in the boiler room. A fill port and a vent pipe were observed in the concrete paving southwest-adjacent to the building. A sign on the building façade identified a 6,000-gallon No. 2 fuel oil UST. Mr. Bustamante indicated the tank previously used No. 4 fuel oil and that a tightness test was recently performed, but could not provide further details. The 5,000-gallon UST listed on the PBS registration observed in the elementary school building boiler room likely refers to this 6,000 gallon tank with the tank capacity reported incorrectly.. Bustamante also indicated that the observed fill port has not been used since a remote fill port was installed in the Cleveland Place sidewalk in 2005 to allow for easier filling. The building is cooled by window-mounted units.

Interior finishing materials include plaster and drop-tile ceilings; painted block, wooden, gypsum board, and ceramic-tiled walls; and concrete, wooden, carpeted, and ceramic and vinyl tile floors, which were observed to be generally in good condition. The roof is constructed of bitumen shingles, but was inaccessible for inspection. No chemical storage, odors, or staining were noted in the building.

Child Development Center/Pre-Kindergarten Building

The child development center/pre-kindergarten is an approximately 3,400-square foot, one-story brick building located on the southeastern portion of the Site. The building contains a boiler room, storage rooms, restrooms, and classrooms. The roof was not accessible for inspection.

The building is heated by an oil-fired boiler and cooled via window-mounted units. A 275-gallon AST was observed south-east adjacent to the building in a locked wooden enclosure that was not able to be inspected. Mr. Bustamante indicated the tank previously used No. 4 fuel oil, but currently uses No. 2 oil.

Interior finishing materials include plaster and drop-tile ceilings; painted block and ceramic-tiled walls; and concrete and vinyl tile floors, which were observed to be in good condition. The building is illuminated by fluorescent lights, is not served by elevators, and evidence of chemical storage was not observed.

Gymnasium/Auditorium Building

The gymnasium/auditorium is an approximately 13,400-square foot, one- and two-story brick building located on the southern portion of the Site. The building contains a large recreational room, a concession kitchen, storage closets, locker rooms, and a stage on the ground floor; and locker rooms on the partial second floor, which is located on the southeastern portion of the building.

Interior finishing materials include drop tile and corrugated metal (covered by insulation) ceiling; painted block, gypsum, and ceramic-tiled walls; and wooden and ceramic and vinyl tile floors, which were observed to be generally in good condition, with the exception of the insulation on the ceiling, which exhibited evidence of water damage. The building is heated and cooled by air exchange equipment located on the roof, is illuminated by fluorescent lights, and is not served by elevators. The roof was not able to be inspected. No chemical storage, odors, or staining were noted in the building.

Annex Building

The annex is an approximately 7,200-square foot, two-story brick building located on the southeastern portion of the Site. Only the ground-floor shop and boiler rooms were accessible at the time of the inspection. Chemical storage noted in the shop included approximately 100 one-gallon and approximately 20 five-gallon containers of paint; and approximately 50 small (less than one-gallon) containers of aerosols, degreasers, solvents, and soaps, which were neatly stored and labeled with no evidence of a release. Some dry paint was observed on the concrete flooring in the shop. No odors or staining were noted in the areas inspected. The boiler room contained one oil-fired boiler and three oil burner switches. Peeling paint was observed on the shop room ceiling and damaged piping insulation was observed in the boiler room. The roof was inaccessible for inspection. The accessible portions of the annex building are illuminated by fluorescent lights and the building is not served by elevators.

Interior finishing materials include plaster ceilings; painted block and gypsum board walls; and concrete and vinyl tile floors, which were observed to be generally in good condition, with the exception of some cracked vinyl floor tiles and concrete flooring.

A fill port was observed on the southeastern façade of the building. During reconnaissance, the associated UST was being excavated. According to Mr. Bustamante, the tank failed its tightness test and was being excavated to find the source of the leak. A sign on the façade identified the tank as a 2,000-gallon No. 2 fuel oil UST and Mr. Bustamante indicated the tank previously used No. 4 fuel oil.

Garage

The garage is an approximately 2,400-square foot, one-story brick building located on the southeastern portion of the Site. The garage was inaccessible during Site inspection. According to Mr. Bustamante, the garage building contains maintenance equipment. The heating and cooling systems of the building, if any, are not known.

Exterior Spaces

Exterior spaces surrounding the buildings included landscaped and grassy areas, concrete-paved walkways, asphalt-paved parking areas, and an inaccessible, steeply-sloped, wooded area on the northeastern portion of the Site. A pool with an adjacent inaccessible pool shed and asphalt-paved playground with playground equipment is located southeast of the wooded area. Mr. Bustamante

indicated that pool cleaning chemicals are not stored on-site. Dumpsters were observed north of the annex building and contained household garbage. An approximately 43,000-square foot, asphalt-paved parking lot is located on the northwestern portion of the Site and a monitoring well was observed adjacent to the parking lot in the Cleveland Place sidewalk adjacent to the parking lot on the northwestern portion of the Site; however, its use was unknown. No staining or stressed vegetation was observed on or around the parking lot.

Based on observations made during the Site inspection, no changes occurred at the Site since the most recent aerial photograph, dated 2011, as listed in Section 5.3.

8.3 Current and Historical Use Interviews

The following knowledgeable persons were interviewed with regard to the Site pursuant to ASTM 1527-13 Section 10:

8.3.1 Current Property Owner

Name	Title/Company	Telephone #	Years Associated with Site
Mr. Robert Bustamante	Facilities Manager/St. John Villa	N/A	18

Mr. Bustamente of St. John Villa, the current facilities manager and representative of the owner, provided access to the Site and indicated that the Site buildings were constructed throughout the 1900s and have been occupied by a school throughout its history. Detailed information provided during the interview listed above is referenced in applicable sections of this report and is documented on the Record of Communication form in *Appendix K.*

8.3.2 Current Site Operator or Key Site Manager

Name	Title/Company	Telephone #	Years Associated with Site
Mr. Robert Bustamante	Facilities Manager/St. John Villa	N/A	18

As noted above, Mr. Bustamante of St. John Villa provided access to the Site and was interviewed during the reconnaissance. Detailed information provided during the interview listed above is referenced in applicable sections of this report and is documented on the Record of Communication form in *Appendix K.*

8.3.3 Site Occupants

Name	Title/Company	Telephone #	Years Associated with Site
Mr. Robert Bustamante	Facilities Manager/St. John Villa	N/A	18

As noted above, Mr. Bustamante of St. John Villa provided access to the Site and was interviewed during the reconnaissance. Detailed information provided during the interview listed above is referenced in applicable sections of this report and is documented on the Record of Communication form in *Appendix K.*

8.3.4 Past Owners, Operators and Occupants

No prior owners or occupants were available to be interviewed.

8.3.5 Report User

Name	Title/Company	Telephone #	Years Associated with Site
Mr. Matthew Mankovich	Industrial Hygienist/NYCSCA	718-752-5622	N/A

Mr. Matthew Mankovich completed the Phase I ESA All Appropriate Inquiries (AAI) questionnaire for the Site. Mr. Matthew Mankovich indicated that the Site is being considered for acquisition and conversion into a new public school by the NYCSCA.

Detailed information provided during the interviews listed above is referenced in applicable sections of this report and is documented on the Record of Communication form in *Appendix K.*

8.4 Hazardous Substances and Petroleum Products Storage and Handling

Chemical storage at the Site includes cleaning and maintenance chemicals in containers up to five gallons in slop sink rooms, and a maintenance shop, and laboratory chemicals in flammable storage cabinets and on shelving in a science room in the high school building. Chemical storage noted in the annex building shop included cleaning chemicals of approximately 100 one-gallon and approximately 20 five-gallon containers of paint; and approximately 50 small (less than one-gallon) containers of aerosols, degreasers, solvents, and soaps. Some dry paint was observed on the concrete flooring in the shop. The chemicals were observed to be neatly stored and labeled with no evidence of a release. Mr. Bustamante indicated that chemical disposal was handled by private hauler on an as-needed basis. Although the garage was inaccessible at the time of inspection, it reportedly contains additional chemical storage and grounds maintenance equipment. On-site fuel oil storage is considered a REC.

8.4.2 Petroleum Product Storage and Handling

During the Site reconnaissance, fill ports, vent pipes and signs were noted for 2,000-gallon No. 2 fuel oil USTs outside of the elementary school and annex buildings and a 6,000-gallon No. 2 fuel oil UST outside of the chapel building. In addition, a 275-gallon No. 2 fuel oil AST was noted within a wooden adjacent to the child development center building. A PBS registration was observed in the elementary school boiler room listed one 5,000-gallon and two 2,000-gallon USTs, and one 275-gallon AST, which is consistent with the PBS database listing for the Site. It is likely that the 5,000-gallon UST is an erroneous listing and actually refers to the 6,000-gallon UST noted at the chapel building. During reconnaissance, a remote fill port was observed on the eastern Cleveland Place sidewalk. Mr. Bustamante indicated that the 6,000-gallon No. 2 fuel oil UST was previously filled via the direct fill port, but that the remote fill port was installed in 2005 and has been used since that time.

The PBS registration that was observed in the elementary school boiler room identified the date of the last UST tightness tests at the Site as 1992; however, the EDR database listings and the NYSDEC PBS database search details identified the last tightness tests were completed in 2012. According to Mr. Bustamante, the USTs had recently undergone tank tightness tests at the time of the Site reconnaissance, and the 2,000-gallon UST south of the annex building/northwest of the garage failed its test. During the inspection, the area around the UST was being excavated to find the source of the leak. The results of the

tests for the remaining USTs were not yet available. The presence of fuel oil tanks at the Site is considered a REC/VEC.

8.5 Solid Waste Generation, Storage and Disposal

Commercial refuse is generated at the Site. Mr. Bustamante indicated that the chemicals in the high school science classrooms were disposed of by a private hauler on an as-needed basis. No RECs or VECs associated with solid waste generation or disposal were identified during the Site reconnaissance.

8.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) are toxic components of various products including, but not limited to caulking materials, light ballasts, dielectric and hydraulic fluids that were formerly used in electrical equipment such as transformers and hydraulic elevators/lifts. The manufacture and use of PCBs was banned in the United States in 1978.

Based on the ages of the buildings, electrical equipment and transformers, fluorescent lighting fixtures, and hydraulic elevator equipment may contain PCBs. No leaks or spills were noted in connection with the electrical fixtures, light ballasts, transformers or elevator equipment. The potential presence of PCBs in building materials and historical fill material is considered an environmental concern.

8.7 Asbestos-Containing Material (ACM)

AKRF conducted a limited visual survey (i.e., within accessible areas only) for the presence of suspect ACM at the Site. The intent of the survey was to identify exposed suspect ACM through a preliminary visual non-destructive survey. In accordance with the SCA scope of services, no sampling of suspect ACM was performed during this investigation. Pursuant to applicable asbestos control regulations and guidelines, AKRF considered any observed suspect ACM to be asbestos-containing. The presence of suspect ACM is considered an environmental concern.

Suspect ACM at the Site include vinyl floor tile, sheetrock, ceramic and stone tile mastic, acoustical ceiling tile, thermal pipe insulation, roofing materials, spray-on fireproofing, and window caulk and glazing, and are summarized as follows:

Material	Location
Thermal pipe insulation	Boiler rooms
Vinyl floor tiles	Throughout Site
Suspended ceiling tiles	Throughout Site
Sheetrock walls and ceilings	Throughout Site
Ceramic tile mastic	Bathrooms
Stone tile mastic	Lobby and hallways
Window caulk and glazing	Throughout Site
Roofing materials	Roofs

Additional known or suspect ACM may be present in portions of the buildings that were not inspected, including within pipe chases, behind walls, in other hidden locations and/or in buried fill materials beneath the Site.

8.8 Lead-Based Paint (LBP) Survey

During the Site inspection, a limited visual assessment of accessible painted surfaces was performed. No sampling or intrusive work was performed, as this is outside the scope of this Phase I ESA. In accordance with NYCSCA's current interior LBP Inspection protocol, all painted interior surfaces are assumed to be LBP.

Painted surfaces observed at the Site (e.g., walls and ceilings) were observed to be in generally good condition, with some small peeling areas noted on interior and exterior surfaces including peeling paint in the shop room in the Annex Building. Any construction work that may disturb exterior painted surfaces should be inspected, and tested as appropriate, in accordance with NYCSCA's current exterior LBP policies and procedures. Any interior paint that is damaged or in disrepair, or that may be disturbed in any way during construction activities, must be handled in accordance with NYCSCA policies and procedures. In addition, LBP may be present in fill materials beneath the Site. The potential presence of LBP is considered an environmental concern.

8.9 Regulatory Compliance

A PBS registration for one 5,000-gallon and two 2,000-gallon USTs, and one 275-gallon AST was observed in the elementary school building boiler room during reconnaissance. However, during the reconnaissance, placards adjacent to the on-site tanks indicated the presence of one 275-gallon No. 2 fuel oil AST, two 2,000-gallon USTs and one 6,000-gallon UST, indicating that 5,000-gallon tank on the PBS registration is likely in error. The PBS registration should be updated to indicate the correct UST details.

According to Mr. Bustamante, tightness tests were recently performed on the USTs at the Site, and the results of the 2,000-gallon No. 2 fuel oil UST south of the annex building indicated the tank failed the test. During reconnaissance, the tank was being excavated to find the source of the leak, but no further information was provided. Tank testing information should be reviewed to ensure that the USTs are in compliance with PBS requirements.

8.10 Electromagnetic Fields

No evidence of high voltage lines or substations was observed in close proximity to the Site during the reconnaissance, and no high-voltage lines were identified in close proximity to the Site in the regulatory database report provided by EDR.

8.11 Other Environmental Conditions (Methane, Mold, etc.)

During reconnaissance, evidence of water damage was observed throughout the first floor of the high school building addition (constructed in 2005). Evidence of mold remediation was observed on the first floor of the 2005 addition, including drywall removal and dehumidifiers. According to Mr. O'Connor, the first floor of the new high school building has been vacant since it was inundated with water during Hurricane Sandy in October 2012. Mr. O'Connor indicated that the mold was remediated, but the project is under litigation and, therefore, remains in its current state.

According to Mr. Bustamante, minor leaks throughout the Site buildings are repaired as needed. Minor evidence of water damage was observed in the elementary school building classrooms. No mold was observed in any of the Site buildings.

Based on a review of the historic topographic maps, the Site is not located in an area of suspected former wetlands. Therefore, potential subsurface methane beneath the Site is not considered an environmental concern at the Site.

9.0 SUMMARY OF FINDINGS

This report summarizes the findings of the Phase I ESA of St. John Villa Academy located in Staten Island, New York (New York City Tax Block 3087, Lot 1, and Block 3089, Lot 59). The Site address is 57 Cleveland Place, and alternative addresses for the Site include 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, and 18 Hastings Street. The Site consists of an approximately 7.2-acre property developed with eight buildings: a 3-story elementary school with a basement and a partial cellar, a 2-story convent with a cellar, a 4-story chapel with a cellar, a 2- to 3-story high school, a 1- to 2-story gymnasium, a 2-story annex, a 1-story child development center, and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a swimming pool with a pool shed.

The Site is bounded to the north by Garson Avenue, followed by residences; to the east by Narrows Road South, followed by the Staten Island Expressway; to the southeast by Hastings Street, followed by residences; to the south by Knauth Place, followed by residences; to the west by Landis Avenue followed by St. Joseph Academy and Retreat Center; and to the northwest by Cleveland Alley, followed by residences. A groundwater monitoring well was noted on the sidewalk on Cleveland Place between the two site lots. According to the New York City Department of Buildings (NYCDOB) and the Department of City Planning (NYCDCP) zoning map, the Site is zoned R1-2 (Residential). Neither the Site nor adjacent properties contain Hazardous Materials "E" Designations or "D" Restrictive Declarations.

According to the USGS 7.5-Minute Quadrangle Map, *The Narrows, NY – NJ*, dated 2013, the elevation of the Site ranges from approximately 100 to 140 feet above the North American Vertical Datum of 1988 (an approximation of mean sea level), to a high point in the center of the Site. The nearest surface water body is Grasmere Lake, approximately 3,000 feet to the west. The Lower Bay of New York Bay is located approximately 3,000 feet southeast and 4,500 feet east of the Site. Based on USGS mapping, groundwater is anticipated to be encountered approximately 90 to 130 feet bgs, and to flow in a south-southeasterly direction toward the Lower Bay. USGS mapping indicates that bedrock is approximately 250 to 300 feet bgs in the vicinity of the Site. Based on a review of the historical USGS topographic maps, the Site is not located in an area of suspected former wetlands; thus, potential subsurface methane is not considered an environmental concern.

The Site was occupied by Clar Manor boarding house prior to acquisition by St. John Villa in 1930. The Manor house was converted into the convent building, and additional structures were added to St. John Villa throughout the 1900s. Some small accessory structures on the eastern portion of the Site were present from 1930 to 1955. The current layout, including the addition to the high school, was present since 2005. Potential buried debris associated with demolition of historical on-site buildings could include USTs and/or historic fill material of unknown origin, which are considered RECs/VECs.

Visual inspection of the Site and surrounding area was performed on April 18, 2017 by Ms. Amy Jordan of AKRF, accompanied by Mr. Robert Bustamante, the Facilities Manager at the Site, Mr. Mathew Mankovich of NYCSCA, and other members of the NYCSCA team. At the time of the Site inspection, the weather was clear and approximately 65 ºF, and the visibility of the Site was not obscured by weather conditions. The chapel, convent, elementary school, annex, and child development center/pre-kindergarten are heated by No. 2 fuel oil-fire boilers and cooled by window-mounted units; the high school and gymnasium/auditorium are heated by natural gas-powered boilers and cooled by roof-mounted air handling systems. It is unknown if the garage is heated or cooled. The high school is served by one traction elevator; the remaining buildings do not contain elevators.

A PBS registration for one 275-gallon AST, two 2,000-gallon USTs, and one 5,000-gallon UST was observed in the elementary school boiler room, consistent with the PBS listing for the Site in the regulatory database. A 275-gallon AST was observed southwest-adjacent to the child development center/pre-kindergarten in a wooden enclosure. UST fill ports and vent pipes associated with one 6,000-gallon (registered as 5,000 gallons) and two 2,000-gallon USTs were observed northeast of the elementary school building, southeast of the annex /northwest of the garage, and southwest of the chapel. A remote fill port associated with the 6,000-gallon UST was also observed on the Cleveland Place sidewalk.

Chemical storage at the Site includes cleaning and maintenance chemicals in containers up to one gallon in slop sink rooms and a maintenance shop, and laboratory chemicals in flammable storage cabinets and on shelving in a science room in the high school building. The chemicals were observed to be neatly stored and labeled with no evidence of a release. Mr. Bustamante indicated that chemical disposal was handled by private hauler on an as-needed basis. A hydraulic trash compactor was observed east of the high school building. A 55-gallon drum was observed nearby the compactor; however, its contents were unknown.

Painted surfaces observed at the Site (e.g., walls and ceilings) were observed to be in generally good condition, with some small peeling areas noted on interior and exterior surfaces including the Annex Building. Based on the buildings' ages (with the exception of the high school building addition), electrical equipment, transformers, hydraulic elevator equipment, fluorescent lighting fixtures, and window caulking may contain PCBs.

Suspect ACM noted in the Site building include vinyl floor tile, sheetrock, ceramic and stone tile mastic, acoustical ceiling tile, thermal pipe insulation, roofing materials, spray-on fireproofing, and window caulk and glazing. These materials were noted to be in good condition with damaged pipe insulation in boiler rooms. Additional suspect ACMs may be present in building areas that were not inspected.

Regulatory database listings were identified for the Site including PBS records and two LTANKS listings. Both spills are closed, and St. John Villa facilities staff is aware of in-service fuel oil storage on Site.

On-site recognized environmental conditions (RECs) including: in-service fuel oil storage tanks with two associated closed-status Spill listings and one recent tightness test failure; and, historic fill of unknown origin, potential buried debris, and potential abandoned USTs. Off-site RECs include potential contamination from historic railroad tracks located east of the Site, a nearby PBS facility, and a monitoring well noted on the public sidewalk between the two Site lots. The Phase I ESA also revealed environmental concerns associated with suspect ACM, LBP, and PCB-containing materials in the Site structures and/or in buried debris; a 55-gallon drum with unknown contents; and current and former water damage with associated historic mold growth.

10.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 and the requirements of NYCSCA. Any additions to, exceptions to, or deletions from this practice are described in Section 2.0 of this report.

This Phase I ESA has revealed the following RECs, CRECs and/or VECs associated with the Site:

On-Site REC/CREC/VEC:

- Three in-service fuel oil underground storage tanks (USTs) with two closed-status Spill listings and one reported tank-tightness test failure.
- Potential historic material of unknown origin and/or abandoned USTs associated with demolished historic on-site buildings, and/or potential historic fill associated with past nearby highway construction.

Off-Site RECs/CRECs/VECs:

- Potential contamination associated with historic railroad tracks located east of the Site.
- A NYSDEC PBS listing west-adjacent to the Site at 77 Chicago Avenue.
- A groundwater monitoring well observed during Site reconnaissance on the Cleveland Place sidewalk between the two Site lots.

This Phase I ESA has revealed the following other environmental concerns associated with the Site:

- Suspect ACM in building materials and/or buried demolition debris/fill material.
- Suspect LBP identified on painted surfaces and/or buried demolition debris/fill material.
- Potential PCB-containing building materials and/or buried demolition debris/fill material.
- A 55-gallon drum with unknown contents was observed near the High School building.
- Water damage and associated mold growth.

Recommendations

Based on the findings of the Phase I ESA, AKRF recommends performing a Phase II Environmental Site Investigation (ESI) at the Site to investigate the identified RECs/VECs. The ESI should include a geophysical survey and subsurface soil, soil vapor, and groundwater sampling in the areas of concern. Areas that were inaccessible during the Phase I Site reconnaissance should be inspected during the Phase II ESI to check for potential additional RECs and/or environmental concerns. In addition, AKRF also recommends that any ACM, LBP, mold, and/or PCB-containing building components affected by future renovations, repairs, or demolition at the Site be identified and properly managed during such activities. Furthermore, the Site's PBS registration should be updated to correct the 6,000-gallon UST capacity, and tank tightness testing information should be reviewed to ensure compliance with PBS requirements.

11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

AKRF Engineering, P.C. (AKRF) has performed a Phase I ESA of St. John Villa Academy Site (the "Site"), located at 57-61 Cleveland Place in Staten Island, NY. The scope of the Phase I ESA was consistent with the requirements of ASTM Standard Practice E 1527-13 and of NYCSCA. Signatures of the Environmental Professionals who participated in conducting this Phase I ESA are provided below. Qualifications for these individuals are provided in *Appendix L*. AKRF declares that to the best of their professional knowledge and belief, they meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. AKRF has the specific qualifications based on education, training and experience to assess the subject property. AKRF has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

SITE PHOTOGRAPHS

Photograph 1: The convent building facing southeast.

Photograph 2: Ground floor kitchen in the convent.

Photograph 3: First floor entryway in the convent building.

Photograph 4: Rear façade of the chapel building facing east.

Photograph 5: Ground floor storage room in the chapel building.

Photograph 6: Petrometer in the ground floor chapel boiler room.

Photograph 7: Three oil-burning boilers in the chapel boiler room.

Photograph 8: First floor chapel.

Photograph 9: Vent pipe adjacent to the southern chapel building façade for a 6,000 gallon No. 2 fuel oil UST.

Photograph 10: Former direct fill port south-adjacent to the chapel building (left) and current remove fill port along the Cleveland Place sidewalk (right).

Photograph 11: Elementary school building façade facing east.

Photograph 12: Typical interior hallway within the elementary school building.

Photograph 13: Typical classroom in the elementary school building.

Photograph 14: Oil-burning boiler in the elementary school building basement.

Photograph 15: Damaged boiler piping insulation in the elementary school building basement.

Photograph 16: Minor water damage in the elementary school building.

Photograph 17: Fill port and vent pipe for the 2,000-gallon No. 2 fuel oil UST on the northern façade of the elementary school building.

Photograph 18: Eastern façade of the high school building along Landis Avenue.

Photograph 19: Concrete-paved courtyard adjacent to the high school building, facing northeast.

Photograph 20: Water damage from an October 2012 flood in the high school building addition.

Photograph 21: Typical hallway in the high school building.

Photograph 22: Typical classroom in the high school building.

Photograph 23: Chemical storage in the high school building science classroom.

Photograph 24: Southern façade of the annex building.

Photograph 25: Paint storage in the annex building.

Photograph 26: Oil burner switches in the annex building.

Photograph 27: UST excavation south of the annex building.

Photograph 28: Gymnasium/auditorium building western façade.

Photograph 29: Recreational space within the gymnasium/auditorium buildi8ng.

Photograph 30: Garage building southern facade.

Photograph 31: AST adjacent to the child development center/pre-kindergarten building.

Photograph 32: Classroom in the child development center/pre-kindergarten building.

Photograph 33: Parking lot northwest of Cleveland Place on the western portion of the Site.

Photograph 34: Wooded area on the northern portion of the Site.

Photograph 35: Playground (foreground) and pool (background) on the eastern portion of the Site.

Photograph 36: Monitoring well in the Cleveland Place sidewalk.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 2

NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 15 NY LTANKS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2017 has revealed that there are 99 NY Spills sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 10/27/2016 has revealed that there are 2 NY DRYCLEANERS sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 9 EDR Hist Cleaner sites within approximately 0.5 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS: The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA HWS list, as provided by EDR, has revealed that there is 1 NY RGA HWS site within approximately 1 mile of the target property.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. This spill site cleanup has been consolidated under Spill No. 9403549. A site investigation work plan was submitted to DEC for review and approval on November 7, 2003. DEC's Sigona sent comments regarding a proposed Work Plan for Site Investigation by BEM Systems, Inc., dated November 5, 2003. Based on the results of our site visit and PBS inspection on June 20, 2003, and evaluation of the proposal by BEM, the DEC accepts MTA Bridges and Tunnel's Work Plan to perform further investigatory actions to address any of the DEC's concerns related to the prior spill investigations at this site. 03/29/05: Transfer from Rommel to Tibbe. 10/18/05: An investigation was performed by MTA B&T into this tank failure. This spill pertains to two 550 gallon gasoline tanks that were subsequently removed in 1996. During repair operations after this failure, contaminated soil was encountered and excavated (see Spill # 94-07908). An investigation was performed in 2004 following a work plan approved by Anthony Sigona. The work plan required only 2 broings with soil and groundwater sampling, which was performed utilizing a geoprobe. The boring logs for these two samples geoprobes did not identify any contamination. Even though the boring logs not moist soil, groundwater was not encountered down to51 feet. A temporary well was installed but remained dry. Therefore, no water sample was collected. No PID readings were encountered above background which is confirmedbythe soil samples which were ND for all VOCs and SVOCs except two very low SVOCs. Since no soil contamination was encountered, groundwater is beyond 50 feet and the tanks have been removed, it has been determined that no further action is required. "

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No

NYSDOT-VERRAZANO NARROWS BRIDGE-DOT BIN #5521217 (Continued) **1000141529**

Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

DEC Memo:	"e2mis no. 154647: 2 gal of cable oil spilled from aerial joint on pole 18904 at 1806 Hylan Blvd on to concrete and grass covering a 15' x 15' area, 1/2 concrete and 1/2 grass. No sewers or waterways affected, no smoke or fire. Cleanup pending crews. 8/3/04 @ 0010 hrs, Clean Ventures reports cleanup complete at 0010 hrs. 2 - 55 gallon drums of solid waste generated. A 17' x 17' area was cleaned by digging and power washing. Cleanup was treated as 50-499 ppm. Waste consists of grass and soil, speedy dry, diapers, socks. As per Ann Ip (EH&S Representative) who visited the spill site on 8/3/04, the total area cleaned was 10'x12' - this included a 5'x7'x3 of grass area which was removed and the remaining concrete area power washed with Seawash and water. Speedy dry, diapers and socks were used as the absorbents as stated above. In addition, the affected area should be no bigger than 10'x12' because area beyond this appeared very clean and there was no sign of oil stain. As per Construction Underground the joint and cable were removed and replaced with new cable and two joints on 8/3/04."
Remarks:	"faulty cable joint caused the 2 gallon spill.clean up pending crew.reference number 154647"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL E2MIS 138835 8/9/01...1725 hrs...Employee K.Carl notified the Control Center that at 1715 hrs. he discovered a dielectric fluid leak from 33KV aerial cable on pole 27643 at 81 - 83 McClean Ave. approx. 3 pts of fluid leaked onto the ground beneath pole 27643. There were also 4 automobiles impacted, all with a few droplets each on the surface of the cars. 1. An Audi, NY plate # N11-8PB owned by Corrine Beshner of 830 Howard Ave., Apt. # 4B, 10301. 2. A 1998 Saturn, NY plate # K15-OXX, owned by Kathleen Cogan of 83 Mcclean Ave.. 3. A 1989 Plymouth also owned by Ms. Cogan NY plate # CR8-70K. 4. An Oldsmobile, NY plate # AEC- 6340,owner unknown at this time. Mr. Carl and Supervisor R.Moloughney Double-washed the vehicles with citrus clean and told the owners to bring them to car washes and submit bills to Con Ed for reimbursement. CDUG Supervisor G.Conroy

POLE #27643 (Continued) **S105141384**

and a UG crew are on site and will perform cleanup of the impacted ground beneath the pole. Spill will be treated as 50-499 ppm pcbs. There were no sewers or waterways involved. Also there was no smoke or fire condition...CIG notified..(Pete Maguire) at 1833 hrs.....T.Bergendale..# 23178. 8/9/01...1915 hrs..UPDATE...1920 hrs. CDUG Supervisor G.Conroy notified the Control Center that he and his crews completed cleanup activities at this location. Employees R.Mazza, D.Laroy, and R.Pizzo cleaned up impacted soil beneath pole 27643. They double washed the adjacent roadway area with citrus cleaner and speedy dry , dug up and removed an area of soil approx. 1' x 2' x 4'' deep, and filled one barrel that was brought to VBSC to be disposed of as hazardous waste. The field Foreman stated he could not obtain a sample of the spilled material. T/S installed plastic bag around leaking joint until feeder can be deenergized to make permanent repair. S.I. ES & H Rep. L.Lukshides notified at 1930 hrs.....T.Bergendale..# 23178. UPDATE 8/14/01 As per G. Conroy the roadway area which was double washed and rinsed was 2'x3' and the cable (not a joint) was wrapped with an absorbent pad and then bagged.....G. Triolo, #01868. UPDATE 1/3/02 1120 Hrs. As per Construction Underground cable was repaired on 12/20/01...G. Triolo, #01868."

Remarks: "caller reporting a spill of material from a leaking arial cable which leaked 3 onces of mateial onto 3 cars. "

Registry ID: 110009472784

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

J O TAILOR INC (Continued) **1000140837**

Registry ID: 110004397992

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #147383: 3/4/03 @ 1030 hrs, OS Cliff Stock reports 2 gallons of Transformer oil spilled on bluestone at Wadsworth S/S. While pumping new oil into the tap changer compartment, the hose ruptured and sprayed oil onto an 8' X 3' area of bluestone. Some oil sprayed onto a PST employee Ajmal Niaz 88304. Oil got on his coat and dungarees, none on his skin no medical attention required. Oil also got on vehicle #22180. Cleanup is in progress and will be treated as non PCB because it is new oil. 3/4/03 @ 1400 hrs, Cliff Stock reports cleanup completed at 1400 hrs. 2 of bluestone removed 3' X 10' area. Vehicle 22180 thoroughly cleaned with Simple green and Pads. 2- 55 Gallon drums of debri generated and disposed of at 4400 Victory Blvd. UPDATE 3/20/03 1225 Hrs. This report is being updated to provide the following information: 1) Responsible Operation was changed from Control Center to I&A/Substation Maintenance, 2) information was added to Event Cause Screen, 3) information was added to Event Involved Person , 4) the finder was Cliff Stock, employee #19457, Operating Supervisor, Apparatus, 5) cleanup persons were Joseph Cardone and Thomas Santora, 6) cleanup supervisor was Cliff Stock and 7) the clothes (coat and dungarees) were sent out to be cleaned.....G. Triolo, #01868. 4/7/03 1250 hrs.....The ruptured hose was removed and replaced on the same day in order to complete pumping of new oil into the tap changer compartment. The ruptured hose was disposed as part of cleanup waste. This report is ready to be submitted to the DEC for closure approval....."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #135737: 2/28/2001 1320 Hours. Vincent Caccavo #41143 reported discovering a transformer oil leak from the throat compartment of transformer #1 at Wadsworth #1 Substation. The oil spilled onto leaves and pine needles on top of a cement pad in which the transformer is placed. Absorbant pads were placed to absorb the spill, and an investigation to see if any soil lay beneath the pine needles and leaves. The spill was discovered at 1315 hours and reported to #9 at 1320 hours. The amount of the spill is approximately 2 gallons of transformer oil. A liner of a bucket truck was placed underneath the throat of the transformer due to a previous spill which was full, but the actual release over the bucket was about 2 gallons. The working group reports a 12 x 12 amount of soil was affected and will be removed during clean up. As of 7/5/2000, lab sequence #00-06371 indicates the oil PCB concentration to be 17 PPM.

WADSWORTH SUBSTATION (Continued) **S104953119**

The working group were directed to take a sample and to treat the spill as 50-499 PPM. 2/28/2001 As per EHS supervisor Ann Ip the spill can be treated as non-pcb due to prior readings in 1992 and 2000. One of the two readings has to be after 9/98 to eliminate a sample and to perform clean up as non-pcb. 2/28/2001 1720 Hours. Company employee Vincent Caccavo reports clean up completed. Speedy-dri, absorbant pads and citrus cleaner utilizied in the clean up. A 12 x 12 x 4 deep section of soil removed from station. Disposal of debris to be performed in conjunction with all company rules, regulations and procedures. 3/26/01 As per Joe Castaldi Transformer scheduled to be replaced. Two drums of debris (1 solid and 1 liquid) was taken to VBSC for disposal. Employees were there for maintenance and inspection. UPDATE 12/13/01 0900 Hrs. As per I&A supervisor (Joe Castaldi), transformer was replaced on 12/6/01. After the unit was removed, it allowed the crew to perform better cleaning of the old stains (caused by previous spill) on the concrete surface. The stained area was double washed and rinsed with citri-clean and water on 12/7. Prior to the completion of this additional cleanup job, it began to rain heavily. As a result, the concrete trough (3' x 3' x 4') located next to the stained area was half-filled with water with a sheen on the top. This water (approx. 150 gal.) was pumped on 12/12/01 and it was transported to Astoria for disposal as non-PCB waste. In addition, one drum of solid waste (PPE, absorbent pads, etc.) was also generated and it will be brought back to VBSC for disposal as non-PCB waste. Since the additional cleaning was associated with the previous spill, the cleanup completion date and time is changed from 2/28/01 1720 hrs to 12/12/01 0940 hrs. 12/19/01 0850 hrs....One drum of solid waste (e.g., PPE, absorbent pads) generated from this cleanup was brought back to VBSC on 12/18 for disposal as nonhazardous waste."

Remarks: "tranform #1 leaking cleanup is in progress ref #135738"

DEC Memo:	"EH&S Siegel reports that Terfetto Const. Co. working for City of N.Y. repairing sanitary sewer found approx. 2 gals of unknown oil mixed in w/ 100 gals. of water in 4' x 50' open trench outside of Wadsworth S/S EMIS# 227380. 09/15/11-Hiralkumar Patel. refer to spill #: 1107604 (pics on e-docs) also. DECPiper met Con Ed Vito Mariani onsite to discuss work plan. 6 wells will be intstalled in streey , 3 on each side of sewr main to determine migration of PCBs from Wadsworth Substation from historic spill. Additionally, five onsite wells will be redeveloped and sampled for VOCS, SVOCs and PCBs. work will be conducted shortly. 5/10/12- DEC Piper received SIR. Based oon work, 1.5 ppm of pcb was detected in soil on con ed side of sewer. VOCs related to abandoned vehicles on NYC property was detected in soil and gw. Based on work to date, no further action granted. See edocs if warranted."
Remarks:	"1341 THE CALLER STATED THE SUBSTANCE IS BEING TESTED AND WILL CONTACT DISPATCH WITH UPDATE."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL CON ED 2EMIS REPORT 6-16-01 While enroute do fault on trouble FDR in TM 5841 saw fire shooting out of transformer. When the cover was pulled the crew found there was oil shooting from the top of the transformer. There was no fire or smoke once they pulled the cover. The fire was occuring when the Hi-Voltage was pulsating. It would push the oil out and ignite it. The transformer itself was not on fire or any fire on the floor of the structure. Approx. 25gals. of transformer oil was in the structure, also 1/2pt. of transformer oil sprayed onto the sidewalk area and roadway covering a 2'x2' area. Historical records of transformer show it to be 10ppm, date 1985 (last sample) Took a liquid sample from the source. Will start cleanup as 50-499ppm. 1833hrs. Double washed sidewalk/street with slix and the grating covers with Bio Gen 760. Washed liquids were pushed from street into structure. This job will be closed. @1830 to start over 50 cleanup in line MH #829. 2025hrs. DEP Acting Director Kim Hanna and DEP Inspector Wai Man Wong were shown the spill situation and told of cleanup plans. They requested that we put a right to know PCB tag on the transformer vault. At 1930hrs. DEC Rep. Timothy Demeo arrived on location and was shown the spill ara and informed of cleanup plans. The transformer was made safe to work on at 2010hrs. LSN 01-06614-001 Clenaup proceeding at this time. 6-17-01 0115hrs. Partial cleanup was completed by double washing and using Bio Gen 760 as of this 0100hr. >50 tanker drained unit and removed all liquids from structure. Found earthen sump. Tag left in place pending removal and replacement of transformer. Samples of earthen sump will be taken at that time. 6-20-01 1050hrs. Quantity of oildrained frm transformer is 252 gals 8 gals. of oil removed from structure. Transformer is scheduled for replacement 6-21-01. 6-21-01 1420hrs. Env. Ops reports triple washed structure using Bio Gen 760 found sump cemented. Transformer crew on location to replace unit. Transformer in vault ha sbeen replaced on 6-21-01u "
Remarks:	"thier was a fire in the transformer.oil coming out of the transformer was on fire.thier was a arching in the hole. "

CAMILLE DOGERY HOME (Continued) **S105055225**

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Homeowner: Camil Dogery (718-981-1150) 7/3/2001 Sangesland received a call of a leak from a tank Sangesland spoke with NYC Fire Chief Posovitz who was on site. Approved Oil (718-238-1050) made a delivery on 7/3 early AM. Later in the day there was oil running down the driveway. The oil burner / tank room is on a cement slab at grade level. There was a hole in the tank which let oil drop to the boiler room floor. The oil then poured out through a crack in the wall onto the side driveway. NYC FD was on site and did initial clean up (laid speedie dry)and drained part of the fuel oil tank. Approved Oil had a service rep on site who installed a temporary magnet patch to the tank. Later in the day Petroleum Tank Cleaners came and swept up the FD speedie dry (2 drums?) and removed the drum (3rd drum) of heating oil. PTC then laid down additional drysol (speedie dry). Sweet Claims was called by Approved Oil. Sweet Claims says the tank failed and that is the responsibility of the homeowner. 7/5/2001 Sangesland spoke with the homeowner again. She said NYC DEP was on site (checking for impacts to drains & sewers). This DEP rep indicated that the fault was with the oil company. Sangesland repeated that if the oil company made a typical delivery and did not force the tank in any way, and nothing came out of the vent line, and the tank just failed , then it is the responsibility of the homeowner. The homeowner was directed to repair or replace the tank, clean the area and then apply epoxy paint to the boiler room floor. 7/6-2001 Allstate- Carl Dujmich - 718 370-6860 (homeowner's insurance) called DEC to ask what happened at the site. Sangesland read the above information to Mr. Dujmich. Mr. Dujmich specifically wanted a statement of what work would be needed to close out this spill number. 8/7/2001 Sweet Claims Submitted a FOIL request on behalf of Highlands Insurance Company (insurance company of Approved Oil) This spill number has been closed and consolidated with Spill #0103616 which remains open."

Remarks: "tank leak caused unknown amount of fuel oil to spill onto ground."

boiler room floor. 7/6-2001 Allstate- Carl Dujmich - 718 370-6860 (FAX number for homeowner's insurance) called DEC to ask what happened at the site. Sangesland read the above information to Mr. Dujmich. Mr. Dujmich specifically wanted a statement of what work would be needed to close out this spill number. 8/7/2001 Sweet Claims Submitted a FOIL request on behalf of Highlands Insurance Company (insurance company of Approved Oil) Cross Ref to Spill #0103611 10/2/09 - Austin - Spill transferred from Albany staff (DA Tromp) to Ketani, for further investigation - end 10/23/01 - Raphael Ketani. The spill took place on 7/3/01. It involved the release of #2 oil due to the failure of a 275 gal. AST in the basement of the home. The leak was noticed when the oil seeped through the wall of the house and was seen running on the driveway. The site is a private home at 15 Jackson Avenue, S.I., 10305. It is still owned by Camille Dogery (718) 981-1150. There is a listing in the phone book for a Frank Dogery at (718) 818-0472. There is no case file, nor any E-docs. 10/26/09 - Raphael Ketani. I tried calling Ms. Dogery, but no one picked up the phone and there was no answering machine. I then called Frank Dogery's number, but it was not in service. 11/4/09 - Raphael Ketani. I attempted a site visit today. No one was home when I reached the site. The home is very long (maybe 70 feet) and looks like two home joined end to end. At the back end of the home, there is a vent pipe and a fill port which are protruding through a wall. The vent and fill are under a second floor overhang. I saw no signs of an oil spill. At about 3:30PM, Ms. Dogery called me. She said that she had arrived home to find oil flowing like a river from under a first floor door. The oil was flowing down her driveway. She added that the tank is against this door and the floor is pitched. The whole tank room was filled with oil from a small hole at the bottom of the tank. Ms. Dogery said that Approved Oil had made a delivery that day and the tank gave way. The Fire Department came quickly and sucked out the tank and put down absorbent sand. Then a cleanup crew arrived (she wasn't sure of the name) and put down more sand and drummed up the oil. She said that she had a lot of belongings in the tank room in boxes. The cleanup crew threw them out. The insurance company didn't reimburse her for the damaged belongings. Ms. Dogery said that the cleanup crew gave her a lot of absorbent sand and she put it down as she needed. The odors were very bad upstairs, but it was August 2001 and she had the windows open. The living room is at the back of the house, and the dog smelled the vapors and threw up. However, she said, the dog was fine, otherwise. Allstate had the cleanup crew power wash the tank room floor. I asked her how the floor was at that time. She said that it was in good condition. I asked her whether there were any cracks. She said no and that she painted the floor after it was dry and clean. She said that the vapors were bad for two days, but the absorbent sand helped. Ms. Dogery said that there haven't been any odors in the home for a very long time and she hasn't seen any signs of the oil. Once things were over with, she had the tank patched. There haven't been any leaks since. I advised her to get a new tank as it is pretty old and may leak again. I called up Approved Oil and spoke to Robert Thora (718) 238-1050. I asked him whether he had any documents describing the cleanup activities. He said that he didn't have any records and so he will contact the company he used to have insurance with. He will see whether they have any records. As there were no signs of the oil spill on the driveway or next to the tank room door, and as Ms. Dogery told me that the home has been odor free for years and that

CAMILLE DOGERY HOME (Continued) **S105055225**

the tank hasn't leaked again, I am closing the spill case. "

DEC Memo: "06/30/14-Hiralkumar Patel. 12:16 PM:- spoke with Ms. Lambert. she lives at 35-50 78th Street. she smelled heating oil for about a week, but not continuously. she has already checked boiler in her own building, but found no issues. she did not smelled any odors after 06/28/14. provided duty desk number to Ms. Lambert and asked her to call back if odors noted again. after discussing with DEC Austin, case closed based on available information. 7/1/14 - Obligado - Voice mail from Nancy Lambert. whole block wreeks of oil . The address is 78th st and 37th Ave. 646-734-5462 07/01/14-Hiralkumar Patel. based on odor complaint from Ms. Lambert, case re-opened. 9:55 AM:- left message for Ms. Lambert.
-

-*-*-*-*-*-*-*-*-*-* alternate address for 35-50 78th Street: 35-50 to 35-56 78th Street no spill record found for 35-50 78th St. PBS #: 2-292230 for 35-50 78th Street. as per PBS record, site has one 3,000 gal #6 oil AST in contact with soil. the tank was installed in Jan. 1937. as per NYC DOB record, a permit was approved on 08/02/2000 for building 35-50 78th Street for change in fuel grade from #6 to #2 oil. Jackson 78 Condominum **owner of 35-50 78th St** c/o SLJ Property Management Attn.: Ruben Ramirez **property manager** PH. (718) 539-2022 Ext. 103 as per PBS record, the site has #6 oil tank; but as per NYC DOB permit dated 08/02/2000, application was filed to change fuel grade from #6 to #2 oil.
-

-*-*-*-*-*-*-*-*-*-* 10:14 AM:- left message for Mr. Ramirez. 12:13 PM:- received call from Ms. Lambert. she lives on 6th floor (top floor) of multi-unit residential building. her unit is in southern end of the building, close to 37th Ave. last night, when she came out of subway, she noticed petroleum odors in neighbourhood with strongest level at the intersection of 37th Ave and 78th St. she confirmed that there were no odors this morning. she also confirmed that there are no odors within her building. she mentioned that there was a boiler issue in adjancent building (77-01 to 77-19 37th Ave) during winter. she also mentioned about a vent from a restaurant at the adjacent property.
-

-*-*-*-*-*-*-*-*-*-* alternate addresses for 77-01 37th Ave: 77-01 to 77-19 37th Ave, 35-57 to 35-59 77th Street, 35-58 to 35-60 78th St PBS #: 2-097888. as per PBS record, building 77-01 37th Ave has one 1,500 gal #2 oil AST in cotact with soil. the tank was installed in Jul. 1975. S & F CO., LLC. **owner of 77-01 37th Ave** 105 Court Street, 5th Floor Brooklyn, NY 11201 Attn.: John Donofrio Ph. (718) 852-4001 email: jwchinaia@gmail.com
-

-*-*-*-*-*-*-*-*-*-* 4:15 PM:- went to site for inspection. no petroleum odors noted in area and in main lobby in building 35-50 78th St. spoke with operator of laundromat at 35-58A 78th Street (adjacent to 35-50 78th St). he did not noticed any petroleum odors in neighbourhood last week. 07/02/14-Hiralkumar Patel. 12:15 PM:-

SMELL OF FUEL (Continued) **S117268041**

spoke with Ms. Lambert. she noticed faint odor yesterday evening around 7-8 PM, but not as strong as before. suggested her to call FDNY also, next time when she notice strong odors. after discussing with DEC DeMeo, case closed as no petroleum spill noted."

Remarks: "Smell of oil in the air on 37th Ave between 77 and 78 Streets. Unknown Source. Has been ongoing but intermittent issue for several days now. Smell is currently strong per the caller. Caller stated there are several storefronts in the area and a few are being renovated."

DEC Memo:	"05/20/08-Vought-Off hours responder. Called Mathew Dibono (Fax:212-566-5764) who is a NYCDOB Inspector who was performing inspection and found oil in sump. Leak by fuel supply line into boiler entered drain by boiler which ran to drain adjacent to sump and hence impact to sump. Owner of property is Hunter Gardens. DOB Dibono left violations for oil in sump and left order to have it removed immediately. Rest of spill in basement on concrete. As per Dibono plug to sump electrical was not connected and sump off. As per PBS#2-332348 mailing address of owner is: Mr. Xiang Zhou Hunter Gardens John B Lovett & Assoc. 109-15 14th Avenue College Point, NY 11356 Ph: (718)445-9500x132 Fax: (718)445-9704 Site has one registered 15,000 gallon #6 fuel oil UST. DEC requires CSL with one month due date for: 1)cleanup of impacted sump. As per DEC Krimgold there are no PBS violations as no tightness testing required for #6 fuel oil UST. Vought called Monica Ghulam at above number and spoke to Delores and she has given information of spill to Mr Xiang. No odor complaints received to date. As per Delores spill may be a month old. Vought will follow up call tomorrow to ensure spill is cleaned. 07/28/09-Vought-Received call from and spoke to James Versocki (631-777-6908) who is attorney for Hunter Gardens Coop. Vought faxed him copy of spill report and discussed need to determine source of spill (either underground fuel line requiring soil borings or above groundline with summary of cleanup and no borings). 10/23/09-Vought-Received phone message from Greg Bodnouick (908-581-8560) as to status of spill case as he is preparing Phase I. Vought called Versocki and left message to return call with status of spill case. Called Bodnouick and left message of current status. Vought spoke to Greg and noted that DEC needs letter on whether line is above ground or below groundwater, summary of cleanup activities and repairs if necessary. Vought received message from Versocki who indicated that as part of refinancing that he is hiring Partner Engineering to perform Phase II and they will be submitting report. Vought called Versocki and left second message. 12/03/09-Hiralkumar Patel. case transferred from DEC Vought to DEC Patel as working on another case (0909229) under same management. this spill number is being investigated under spill #: 0909229. alternate addresses: 147-25 to 147-43 38th Avenue building #1: 147-25 to 147-27 38th Avenue building #2: 147-31 to 147-37 38th Avenue building #3: 147-41 to 147-43 38th Avenue PBS#: 2-154075 for building #1. as per PBS record, building 1 has one 5,000 gal #6 oil UST, installed in Jan. 1950. PBS#: 2-332348 for building #2. as per PBS record, building 2 has one 15,000 gal #6 oil UST, installed in Jan. 1950. PBS#: 2-154067

Mr. Rosano will call back with information about cleanup of spill in sump. Janice Panaro **new property manager** Ph. (718) 445-9500 Ext. 116 email: janicep@lovettrealty.com 12/15/09-Hiralkumar Patel. 10:48 AM:- left message for Mr. Rosano about status of cleanup of spill in sump. 10:49 AM:- left message for Ms. Panaro about status of spill cleanup. 11:00 AM:- received call from Ms. Panaro. asked her about spill cleanup in sump. Ms. Panaro doesn't know but will find out and call back. asked Ms. Panaro to call by end of 01/15/10. 11:25 AM:- sent email to Ms. Panaro and asked her to submit sump spill cleanup report (according to letter dated 05/20/08, letter attached to email) and contractor information with work schedule by the end of 01/15/10. 11:34 AM:- received message from Mr. Rosano. he mentioned that sump cleanup will be included in tank removal work as they plan to remove tanks from three buildings. he asked to contact owner's attorney. 11:47 AM:- left message for Mr. Versocki and informed him that spill in sump must be cleaned up immediately, if not done yet. no further delay will be accepted and case may be referred to DEC legal. 12:04 PM:- received message from Mr. Versocki. 12:45 PM:- spoke with Mr. Versocki. Mr. Versocki mentioned that oil from sump has been removed but he doesn't know where drains ends (sump/city sewer or subsurface). asked Mr. Versocki to find out drain terminals and may need soil investigation if drains ends in subsurface. also asked him to provide contractor's info who will going to do tank removal work. Mr. Versocki will send updates. 12/29/09-Hiralkumar Patel. 3:34 PM:- received fax from Mr. Versocki. Mr. Versocki requested 30 days extension (till 02/15/10) to submit sump cleanup report and work plan for tanks closure. Mr. Versocki mentioned that spill #: 0801932 should be closed based on one soil sample result from sump area (this sample result is included in Phase II report dated 10/08/09. see notes and e-docs for spill #: 0909229 for more details). as per Phase II report, one soil boring was installed in basement, next to sump pump, to a depth of 1.5 ft where refusal encountered in the form of large stone fragments. no

HUNTER GARDENS APARTMENT COMPLEX (Continued) **S109063001**

contamination found in soil sample. but this report doesn't include any information about termination point of drain where oil was found. 01/05/10-Hiralkumar Patel. 11:42 AM:- sent email to Mr. Umbach (who submitted Phase II report) requiring to submit scaled site map of sump area as this map is not included in Phase II report. email copied to Ms. Panaro. 11:44 AM:- left message for Mr. Versocki. 01/06/10-Hiralkumar Patel. 12:53 PM:- received call from Mr. Versocki. Mr. Versocki mentioned that building owner is waiting for re-finance closing and once it done (most probably by 01/20/10), they will hire contractor for tank removal work and will submit schedule. asked Mr. Versocki to submit scaled site map of boiler room where oil found in drains and sump. also asked him to find out termination of drains where oil found. 01/21/10-Hiralkumar Patel. 2:32 PM:- spoke with Mr. Versocki. he mentioned that refinance closing is on 01/25/10 and them probably take two weeks to hire contractor. 03/24/10-Hiralkumar Patel. 1:37 PM:- left message for Ms. Panaro. 03/31/10-Hiralkumar Patel. 3:01 PM:- left message for Ms. Panaro. 04/01/10-Hiralkumar Patel. 12:35 PM:- received message from Ms. Panaro. she is dealing with her attorney for contract with cleanup company. she will call back by 04/05/10 with more details. 07/22/10-Hiralkumar Patel. 4:19 PM:- left message for Ms. Panaro to submit work schedule by end of 07/30/10 or else case will be referred to legal (final notice). 08/02/10-Hiralkumar Patel. 3:05 PM:- left message for Ms. Panaro. informed her that as no documents received by end of 07/30/10, these cases will be referred to legal. 3:07 PM:- spoke with Mr. Versocki. he mentioned that they have hired Eastmond and he drafted contract. he will call property manager and will call back. informed Mr. Versocki that if no response from management/owner with updates by end of tomorrow (08/03/10), then these cases will be referred to legal. 4:39 PM:- received email from Ms. Panaro. she mentioned that Hunter Gardens Board President is out of country for 3 weeks. she requested an extension until September when they can have a meeting with the Board President regarding the work schedule, as he would prefer that he be onsite when the work begins. 08/03/10-Hiralkumar Patel. received email from Mr. Versocki with copy of letter. he asked what else needs to be done about spill noticed in sump area. 08/05/10-Hiralkumar Patel. 11:26 AM:- left message for Mr. Versocki informing that the spill #: 0801932 can not be closed as no information available about termination of drains where oil found. 03/23/11-Hiralkumar Patel. 10:23 AM:- sent email to (and left message for) Ms. Panaro requiring to submit update (for spills 0710969 and 0801932) before 03/28/11. informed her that if no updates available by 03/28/11 then the case will be referred to legal. 10:26 AM:- left message for Mr. Versocki. 2:59 PM:- received call from Mr. Versocki. he doesn't have current status but will talk to property manager and will call back. 03/25/11-Hiralkumar Patel. 1:00 PM:- met with Xiang Yang Zhou, co-op board president, who came to office. asked Mr. Zhou to confirm termination point of the drains where oil found in 2008. informed him that if drains ends into city sewer system, then no further investigation is needed and case can be closed, but if drain ends into subsuface soil then the department requires soil investigation at the termination point of drains. also asked him to submit scaled map of boiler room showing sump, drains and previous soil boring location. Xiang Yang Zhou Board President Hunter Gardens Owners Inc. **property owner** Ph. (718) 690-0328 Email: xyz3308@gmail.com 3:59 PM:- sent email to Mr. Zhou requiring to submit a scaled site map (including boiler/sump/drains/drain

HUNTER GARDENS APARTMENT COMPLEX (Continued) **S109063001**

pipe/previous boring locations) and information about termination point of the drains. informed him that if drains terminate into subsurface then soil investigation is required at the terminal point. asked him to submit required information/document by the end of 04/15/11. informed Mr. Zhou that no more time extension will be approved. email copied to Ms. Panaro. 08/05/11-Hiralkumar Patel. 3:57 PM:- spoke with and resent email (that was sent on 03/25/11) to Mr. Zhou and asked him to submit documents by 08/12/11. email copied to Ms. Panaro. 08/16/11-Hiralkumar Patel. received email from Tara Murphy (at 7:07 PM on 08/15/11) from Catman Plumbing including letter confirming that the existing floor drain in the boiler room discharges into an existing sump pit. 09/26/11-Hiralkumar Patel. based on available info, case closed."

DEC Memo:	"Sangesland spoke to Daren Murphy at Soil Mechanics, 3770 Merick Rd., Seaford, NY 11783 They are pulling Ten 550 gal tanks from a former

IFO 900 HYLAN BLVD (Continued) **S103274818**

gas station. Tanks had previously been closed in place (on 1-7-87 according to PBS) and were filled with cement. Mr. Murphy called to say 6 of tanks were out of ground as of 2 PM on 8/12/08 and he would like permission to remove them so they can pull last 4 tanks. Sangesland told him it was OK to remove tanks from site, but they should call Hasan Ahmed before they backfill hole to give him a chance to see it when end point samples are taken. ****NOTE a site with ten 550-gal tanks will also need groundwater samples*** There are 3 different lots next to each other. #900 is an old gas station with several tanks that were abandoned and are now being removed. #908 is a 1 story store front (no tanks) and #920 is another former gas station with a history of tanks, but no spill history. According to PBS, No. 2-610859, ten (10) 550-gallon gasoline tanks closed/abandoned, and excavated in 2008. UST Closure and Subsurface Investigation Summary Report (Soil Mechanics, Environmental Services, Inc. Ph: 516-221-7500 Fax: 516-679-1900 Mr. Vincent Nantista). Tank removal performed by Shamrock Materials LLC, 131 Willow Ave., Staten Island, NY. August 22, 2008 900 Hylan Blvd. Staten Island, NY NYSDEC Spill No. 0805460 The site consists of a two-story multi-tenant retail and office building (constructed circa 1987) with partial basement surrounded by concrete walkways and paved parking areas. It is bounded by Hylan Blvd. to the west, Sand Lane to the east, residential and commercial to the south, and Seton Foundation for Learning to the east. The property was previously a gasoline station, with 10 550-gallon single wall, steel tanks abandoned in place via the filling with concrete slurry. The excavation of tanks along with overburden material and concrete encasement took place August 12th to 15th 2008. All tanks were cut and cleaned on-site, and all associated piping removed. No fill ports and/or dispenser islands were present. Tank 'inspection revealed each to be in good condition with no obvious signs of holes and/or pitting. During removal, visibly contaminated soils were detected within overburden and surrounding material, and removed to the extent possible (847 tons). After excavation and tank/soil removal, the limits of the remedial excavation were about 40 by 25 with a depth of 15 bgs. Groundwater was not present at the time of work. Sidewall and endpoint samples were subsequently collected utilizing a hand auger; EP-1 from north wall, EP-2 and EP-5 from the bottom, EP-3 and EP-8 from west wall, EP-4 and EP-6 from east wall, and EP-7 from south wall. Semi-volatiles were either not detected or below TAGM. Volatile organics, however, were present in the following samples: 178ppb Benzene, 3,524ppb p-m Xylenes EP-1 (15 bg); 13,685ppb Toluene, 14,486 Ethylbenzene, 15,428 1,3,5 Trimethylbenzene, 48,802 1,2,4 Trimethylbenzene, 73,328ppb p-m Xylenes, 26,430 o-Xylene EP-2 (15 bg); 344ppb Benzene EP-4 (15 bg); 7.613ppb Benzene, 84.483 Toluene, 30.611 Ethylbenzene, 3.437ppb Isopropylbenzene, 10.773ppb n-Propylbenzene, 25.959ppb 1,3,5, Trimethylbenzene, 80.347ppb 1,2,4, Trimethylbenzene, 138.060ppb p-m Xylenes, 50.066ppb o-Xylene EP-5 (15 bg); 170ppb Benzene EP-6 (15 bg); 7.578ppb Benzene, 59.923ppb Toluene, 37.411ppb Ethylbenzene, 4.949ppb Isopropylbenzene, 15.140ppb n-Propylbenzene, 35.082ppb 1,3,5 Trimethylbenzene, 112.137ppb 1,2,4 Trimethylbenzene, 13.887ppb Naphthalene, 184.839ppb p-m Xylenes, 62.345ppb o-Xylene EP-7 (15 bg); 9.223ppb Toluene, 14.675ppb Ethylbenzene, 6.783ppb n-Propylbenzene, 16.683ppb 1,3,5 Trimethylbenzene, 50.623ppb 1,2,4 Trimethylbenzene, 6.152ppb Naphthalene, 63.326ppb p-m Xylenes, 24.934ppb o-Xylene EP-8 (15 bg). Additionally, five soil borings (B1 through B5) were drilled in the

IFO 900 HYLAN BLVD (Continued) **S103274818**

area of the tank excavation. The samples were collected at continuous 2 foot intervals from surface to groundwater (identified at depths of 42-44 below grade) in all samples except B-4. Boring B-4 contained impervious soil that was drilled down to 46 bgs. All soil borings exhibited detectable levels of organic vapor via head space analysis, ranging from 22 ppm and 2000+ ppm at B-1, 19-636ppm at B-2, 1-200+ppm at B-3, up to 2000+ppm at B-4, and 1,440-2000ppm at B-5. Based on these results, nine soil samples were submitted to the laboratory. B-1/S-19, B-1/S-21, B-2/S-3, B-2/S-21, B-3/S-21, B-4/S-23, B-5/S-8, B-5/S-15. The results are as follows: 7738ppb Benzene, 48708ppb Toluene, 14745ppb Ethylbenzene, 5908ppb n-Propylbenzene, 13795ppb 1,3,5 Trimethylbenzene, 37165ppb 1,2,4 Trimethylbenzene, 64069ppb p-m Xylenes, 24257ppb o-Xylenes B-1/S-19 (36 -38 bgs); 110860ppb Benzene, 446585ppb Toluene, 130412ppb Ethylbenzene, 13628ppb Isopropylbenzene, 46532ppb n-Propylbenzene, 97069ppb 1,3,5 Trimethylbenzene, 262744ppb 1,2,4 Trimethylbenzene, 42874ppb Naphthalene, 515151ppb p-m Xylenes, 204023ppb o-Xylenes B-1/S-21 (40 -42 bgs); 680ppb Benzene, 2325ppb Toluene B-3/S-21 (40 -42 bgs); 402ppb Benzene B-4/S-20 (38 -40 bgs); 481ppb Benzene, 31ppb 1,3,5 Trimethylbenzene, 80ppb 1,2,4 Trimethylbenzene, 471ppb Acetone, 2665ppb MEK B4/S-23 (44 -46 bgs); 1526ppb Benzene, 3141ppb Toluene, 910ppb Ethylbenzene, 266ppb n-Propylbenzene, 723ppb 1,3,5 Trimethylbenzene, 2237ppb 1,2,4 Trimethylbenzene, 600ppb Naphthalene, 1229ppb MEK, 3868ppb p-m Xylenes, 1573ppb o-Xylenes B-5/S-8 (28 -30 bgs); 56707ppb Benzene, 298730ppb Toluene, 94700ppb Ethylbenzene, 39619ppb n-Propylbenzene, 82868ppb 1,3,5 Trimethylbenzene, 216859ppb 1,2,4 Trimethylbenzene, 4886ppb Sec-Butylbenzene, 3641ppb P-Isopropyltoluene, 34225ppb Naphthalene, 375456ppb p-m Xylenes, 152491ppb o-Xylenes B-5/S-15 (42 -44 bgs). These results of endpoint samples from the walls and bottom of the remedial tank excavation and soil samples from soil borings, indicated that additional subsurface investigation is warranted. Supplemental Subsurface Investigative Activities Report (Soil Mechanics, Environmental Services, Inc. Ph: 516-221-7500 Fax: 516-679-1900 Mr. Vincent Nantista). January 20, 2009 In order to delineate the soil and groundwater contamination, the investigation included the drilling of three (3) soil borings, B-6, B-7, and B-8, close to the remedial excavation site. Soil boring samples were collected continuously from surface to the groundwater table, which is at an elevation of 13 to 20 above sea level. Depth to water was at depths of 42 to 47 feet bgs. Low specification monitoring wells, MW-1, MW-2, MW-3, MW-4, were installed at boreholes B-5 (of previous investigation), B-6, B-7, and B-8, respectively. Collected soil samples were analyzed with a PID, which revealed detectable levels of organic vapor in borings B-6 (up to 551ppm), B-7 (up to 2000ppm), and B-8 (up to 2000ppm). The soil sample results indicated detectable levels of semi-volatile organics, but below the TAGM limits. Volatile organics, however, were detected in soil samples: 342ppb Benzene and 5251ppb p-m Xylenes B-8/S-7 (30 -32 bgs); 2600ppb Benzene, 4792ppb Toluene, 2763ppb p-m Xylenes, 1222ppb o-Xylene, 248ppb MTBE B-8/S-9 (40-42 bgs). Additionally, the groundwater from the monitoring wells was analyzed for organic matter, all accept the MW-1 sample. A floating product was identified at MW-1, and was being analyzed at the time of reporting. The results for other three samples indicated presence of both volatile and semi-volatile organic matter. The results are as follows: 139ppb Naphthalene, 17ppb w-Methylnaphthalene, 2636ppb Benzene, 77ppb Toluene, 501ppb Ethylbenzene, 98ppb Isopropylbenzene, 97ppb n-Propylbenzene, 164ppb

IFO 900 HYLAN BLVD (Continued) **S103274818**

1,3,5 Trimethylbenzene, 454ppb 1,2,4 Trimethylbenzene, 770ppb p-m Xylenes, 204ppb o-Xylene, 222ppb MTBE MW-2 (40 -42 bgs); 252ppb Naphthalene, 48ppb 2-Methylnaphthalene, 7ppb Bis(2-ethylexyl)phthalate, 1611ppb Benzene, 105ppb Toluene, 733ppb Ethylbenzene, 99ppb Isopropylbenzene, 112ppb n-Propylbenzene, 216ppb 1,3,5 Trimethylbenzene, 622ppb 1,2,4 Trimethylbenzene, 2158ppb p-m Xylenes, 570ppb o-Xylene, 263ppb MTBE MW-3 (45 -47 bgs), 10ppb 3+4-Methylphenol, 11ppb 2,4-Dimethylphenol, 57ppb Naphthalene, 13ppb 2-Methylnaphthalene, 1832ppb Benzene, 2471ppb Toluene, 716ppb Ethylbenzene, 83ppb n-Propylbenzene, 198ppb 1,3,5 Trimethylbenzene, 579ppb 1,2,4 Trimethylbenzene, 2514ppb p-m Xylenes, 909ppb o-Xylene, 240ppb MTBE MW-4 (40 -42 bgs). Top of casing elevations and depth to water were recorded at monitoring well locations MW-2, MW-3, MW-4 for the purposes of preparing a site specific groundwater contour map. Additional subsurface investigative activities will be completed in the proximity of monitoring well MW-1 to investigate for the presence of floating product, as it will continue to be recovered. Groundwater Analysis Report (Soil Mechanics, Environmental Services, Inc. Ph: 516-221-7500 Fax: 516-679-1900 Mr. Vincent Nantista). November 16, 2009. The monitoring wells MW-2, MW-3, MW-4, were sampled a year after their initial installation in 2008. The results for most compounds revealed decreasing amounts of both semi-organic volatiles and organic volatiles. The decrease has been significant for samples MW-2 and MW-3: 139ppb Naphthalene, 17ppb 2-Methylnaphthalene, 1178ppb Benzene, 314ppb Ethylbenzene, 56.5ppb Isopropylbenzene, 62ppb n-Propylbenzene, 146ppb 1,3,5 Trimethylbenzene, 365ppb 1,2,4 Trimethylbenzene, 222ppb p-m Xylenes, 202ppb MTBE MW-2 (40 -42 bgs); 20ppb Naphthalene, 216ppb Benzene, 7ppb Toluene, 82ppb Ethylbenzene, 16ppb Isopropylbenzene, 22ppb n-Propylbenzene, 47ppb 1,3,5 Trimethylbenzene, 118ppb 1,2,4 Trimethylbenzene, 235ppb p-m Xylenes, 54ppb o-Xylene, 35ppb MTBE, 7ppb 1,2-Dichloroethane, 15ppb 2-Butanone, 10ppb p-Isopropyltoluene, 6ppb Sec-Butylbenzene MW-3 (45 -47 bgs); 100ppb Naphthalene, 26ppb 2-Methylnaphthalene, 2222ppb Benzene, 1562ppb Toluene, 726ppb Ethylbenzene, 104ppb n-Propylbenzene, 260ppb 1,3,5 Trimethylbenzene, 796ppb 1,2,4 Trimethylbenzene, 2384ppb p-m Xylenes, 561ppb o-Xylene, 337ppb MTBE MW-4 (40 -42 bgs). The free product that has been identified at monitoring wells MW-1, MW-5, MW-6, and MW-7, and has been removed in the amount of 48 gallons, is believed to be slowly leaching out of the relatively impervious soil formations located above the water table and immediately below the footprint of the recently removed gasoline UST s. Due to the low levels of semi-volatiles identified, the future analysis of aqueous samples will be conducted for volatile organics only. Report (Soil Mechanics, Environmental Services, Inc. Ph: 516-221-7500 Fax: 516-679-1900 Mr. Vincent Nantista). March 5, 2010 The bailing of free product for MW-1, MW-5, MW-6, MW-7 has continued on a biweekly basis for six weeks. The peripheral wells MW-2, MW-3, MW-4 have been sampled on a quarterly basis. A series of charts have been constructed to illustrate the product thickness obtained across time. The results are as follows: Nov 24th-9 , Dec. 8th-6 , Dec. 22nd-4.5 , Jan. 5th-4 , Jan. 19th-3.3 , Feb. 2nd-3 , Feb. 16th-2.7 , Mar. 2nd-2 MW-1; Nov 24th-2.8 , Dec. 8th-1.9 , Dec. 22nd-1.5 , Jan. 5th-1.5 , Jan. 19th-1.5 , Feb. 2nd-1.5, Feb. 16th-1.4 , Mar. 2nd-0.5 MW-5; Nov 24th-2.2 , Dec. 6th-1.4 , Dec. 22nd-1 , Jan. 5th-0.8 , Jan. 19th-0.8 , Feb. 2nd-0.7 , Feb. 16th-0.6 , Mar. 2nd-1 MW-6; Nov 24th-1.5 , Dec. 6th-1 , Dec. 22nd-0.8 , Jan. 5th-0.8 , Jan. 19th-0.7 , Feb. 2nd-0.7 , Feb. 16th-0.6 , Mar. 2nd-0.15 MW-7. Within

IFO 900 HYLAN BLVD (Continued) **S103274818**

this six (6) weeks period, 175 gallons of free product were recovered. Report (Soil Mechanics, Environmental Services, Inc. Ph: 516-221-7500 Fax: 516-679-1900 Mr. Vincent Nantista). May 25, 2010 Bi-weekly observation continues at seven monitoring wells. To date from the inception of investigation no free product in MW 2, 3 and 4. To date a total of 585 gal of gasoline have been recovered. Below are the groundwater data on 05/25/10: MW# Height of Product (ft) Product Removed (gal) 1 .77 2.5 5 .93 3 6 .68 2 7 .13 0.5 6/24/10-HRAHMED-After discussion with Randall Austin (RSE) this case is trasferred to Remediation section B for further investigation/remediation. case assigned to Vadim Brevdo. 7/2/2010 - Carlson: Case assigned to Carlson. Meeting held with owner Frank Fosseli, attys Michael Menicucci, Richard Rosenzweig, Vince Nantista - Soil Mechanics, and NYSDEC Carlson, Tibbe, Urda - Legal. Hand delivered letter and Stipulation dated July 1st requiring additional delineation and Stipulation Agreement. Deadline for Stipulation Agreement submittal extended to July 30th. 8/15/2010 - Carlson: Stipulation Agreement signed - effective 8/10/2010. 9/17/2010 - Carlson: Reviewed work plan. Three soil borings/wells proposed. Sent email/fax requiring submission of a revised work plan with two additional monitoring well locations, and modifying the site plan to include existing monitoring wells. Revision due in 30 days. 9/27/10 - Breen: We received a one-page revision to RIWP showing SB and MW locations from Soil Mechanics. See e-docs. 10/28/10 - Breen: I sent e-mail to Daren of Soil Mechanics asking them to update the entire RIWP, text as well as drawing. See e-docs. Daren replied that they had already done this. I found the document in Sarah's mail slot. 11/3/10 - Breen: Daren says that Vince does not have an e-mail address, so I should send e-mails to Daren, but not look to him for anything other than passing them on to Vince. 11/3/10 - Breen: I sent approval letter for Investigative Work Plan. It calls for five new borings/wells to further the delination of the g/w plume. 12/22/10 - Breen: Investigation Report received, one CD and one hard-copy. Two of the new wells are clean, one has free product, and the other two have dissolved. Soil and g/w delineation is pretty clear at this point. G/W elevation contours are not given. Consultant's conclusion is that bailing twice a month is optimum based on the painfully slow rate at which the soils release product (gasoline). In addition to the bailing DEC would like to see them sample the five wells that have dissolved on an annual basis. These wells are MW-2, MW-3, MW-4, MW-9 and MW-11. If dissolved does not attenuate on its own and/or in response to the bailing, we could wind up with five more wells with dissolved (MW-1, MW-5, MW-6, MW-7 and MW-12), and a more aggressive approach would have to be taken at that point. This station had ten 550s that were abandoned in place and later excavated. Since this release took place over thirty years ago, delaying aggressive remediation by a year or two to try bailing poses no risk. The same observation that says the soil is slow to release the gasoline it holds captive, also keeps the gasoline from migrating from where it is now. 1/6/11 - Breen: Daren inquires by e-mail on behalf of Vincent about status of review of IR and asks if they and their client could come in for meeting perhaps next week. I called Daren. I told him the letter was in the works. He said he did not know what the reason was for the meeting; he was just doing what Vince told him to do. I told him to hold off on having Vince call me until he gets the letter, which disapproved their investigation rpt. 3/14/11. Investigation report received. Copy went to Attorney, Michael Menicucci, Esq. 3/30/11. Vinnie Nantista called to follow up

IFO 900 HYLAN BLVD (Continued) **S103274818**

on the RI report. 516-221-2333. He is in a bind. The product is deep (43 feet to g/w) in pockets of clay, localized to a small area, is immobile, is hard to reach, is not degrading (is perfectly fine when they recover a gallon or two), has been there a long time, there are no receptors. I told him to look into EPA websites for guidance on how to present an exception to the Regulations. He has been around a long time (1930's, he says). These clients are older, in their eighties. They have a buyer. He's been on the hook for three years. I may have to consult with Albany on this case. Vinnie has been bailing for three years. Product is in a buried sponge. They poked holes in the sponge installing wells. Geology of this site is odd and difficult. It hampers recovery. It protects the environment, by the same token. Geology of the site is the key. G/W flows over a dam made of clay. G/W drops several feet in just a short distance. all of this is surrounded by sand. He has been bailing. Recharge is painfully slow. There is no pancake plume, rather pockets of product in chambers of clay. We may have introduced bleeding when we put in wells. Wells are 43 feet deep. Client calls Vinnie every day. Difficult project due to local geology, clays and silt. Product trapped in pockets. Recovery is two or three gallons per visit. I gave him two EPA websites to pursue for closure language and rationale. He wants closure as an exception. DEC does not close on that basis. Liquid gasoline does not qualify for an expection. His clients want him to appeal for an exception. Regulations do not allow us to close. His clients are looking for a way out, a way around Regulations. Let them explore EPA's rules. That may be the approach he should take. 3/31/11. Albany contacted region because a State Senator contacted them about closure. Site is under Stip since 8/15/2010. They are currently bailing gasoline at rate of two or three gallons per visit, yet they want closure because they are sick of this dragging on. 06/07/11: This spill case transferred from G. Breen to J. Kolleeny. - JK 06/10/11: Reviewed Revised Investigation Rpt by Soil Mechanics Envt'l Svcs, dated 3/14/11 (in eDocs), re-submitted with cover letter dated 5/17/11. Rpt summarizes supplmnt'l investigation involving soil borings and install'n of addt'l wells. Soil contam only found in smear zone, but free product detected in one new well (MW-12), plus four existing wells (MW-1, MW-5, MW-6 and MW-7); several wells without product have significant levels of dissolved-phase contam. Based on all data, Soil Mechanics recommends continued monthly product recovery by manual bailing, and quarterly sampling of down-gradient monitoring wells. They note that site has fine-grained soils which are holding product captive and hampering product recovery efforts. I contacted Vincent Nantista of Soil Mechanics, explained that this recommendation does not address dissolved GW contam and will not recover product in timely manner; asked if they had investigated use of high-vac extraction at site, which can be effective at sites with tight soils. He seemed unfamiliar with this technology. I sent email to his colleague Daren Murphy, stating: In my conversation with Vincent Nantista about various approaches to recovering separate-phase product and cleaning up site in timely manner, I mentioned that hi-vacuum extraction or dual-phase extraction is remedial technology that can be effective at sites with free product, dissolved-phase GW contam and soil contam, and where there are relatively fine-grained, tight soils. Here is a link to USEPA document about dual-phase extraction: http://www.epa.gov/oust/cat/dualphas.htm. I've also attached more detailed EPA guidance document about that remedial technology [from

IFO 900 HYLAN BLVD (Continued) **S103274818**

How to Evaluate Alternative Cleanup Technologies for Underground Storage Tank Sites]. In letter I will be sending in response to Soil Mechanic's March 2011 investig rpt, I will likely ask that pilot test be performed to see if such approach might be effective at site. For pilot test, mobile hi-vacuum extraction unit would be brought to site and vacuum would be applied to well, and other nearby wells would be checked for vacuum influence; this should be done using several different wells as vacuum extraction well. Also, some aquifer testing, such as slug tests, should be performed to determine aquifer characteristics such as hydraulic conductivity. A work plan for pilot testing would have to be prepared and submitted for DEC review. Please feel free to contact me at (718) 482-6388 if you have any questions. - J. Kolleeny 07/27/11: On 7/19/11, received letter dated 7/18/11 by Vincent Nantista of Soil Mechanics, stating that it is in response to my email of 6/20/11, but letter makes no mention of content of my email, or of phone discussions earlier that day. Letter states that a RAP will be submitted in near future, proposing monthly free product recovery & quarterly GW monitoring; i.e., continuing with current actions, same proposal made in March 2011 Revised Investig Rpt. I contacted Daren Murphy of Soil Mechanics about this, he indicated I would need to send letter to their client. I requested contact info for RP, he sent info (no email available): Sand Lane Development Corp. 254 Natick Street Staten Island, NY 10306 Attn: Mr. Dominick Tomasino, Secretary On 7/27/11, sent letter (in eDocs) to Mr. Dominick Tomasino, cc to Vincent Nantista, stating that remedial approach recommended in March 2011 rpt is not adequate to address site conditions, which include soil contam and dissolved-phase GW contam, in addition to free product. Requested pilot test of hi-vac / dual phase extraction, plus aquifer testing to determine hydraulic conductivity and other relevant aquifer parameters, and requested submission of pilot test work plan for these actions. - J. Kolleeny 09/23/11: Received email from Kathy Mucerino of Soil Mechanics: Attached please find Mr. Nantista's letter with regard to 900 Hylan Blvd., Staten Island (Sand Lane site). Mr. Nantista has asked me to send this to you and Mr. Brevdo. Any questions regarding this site, please contact Mr. Vincent Nantista. Attached was letter rpt (in eDocs as brief) describing rising head slug (bail down) test they performed on MW-1, which yielded permeability or conductivity of 2.79 x 10-5 cm/sec which is indicative of soil's poor drainage characteristics, accounting for very slow product recovery rate. (They are recovering product only by manual bailing.) Letter rpt also states that they are continuing to bail accumulated product in affected wells, and checking all wells during each site visit to confirm that plume is not migrating and to determine GW flow direction. - J. Kolleeny 09/30/11: Received phone call from Vincent Nantista of Soil Mechanics, who asked about possibility of coming in for a meeting to discuss requirements of dual-phase extraction pilot test work plan which I've requested. I told him a meeting is not necessary, and I explained basic elements of DPE pilot test work plan. Mr. Nantista agreed to submit such plan. - JK 10/19/11: On 10/12/11, received email from Soil Mechanics with attached pdf file of work plan for High Vacuum Dual Phase Extraction Pilot Test. After reviewing plan, on 10/19/11 I sent email to Daren Murphy of Soil Mechanics: Daren, I've looked over Oct. 10, 2011 pilot test work plan for this site. I originally had in mind that a mobile skid-mounted remedial unit with a liquid-ring pump (i.e., basically a small, mobile version of same equipment that would be used for an actual DPE

IFO 900 HYLAN BLVD (Continued) **S103274818**

system) would be used for pilot test. I understand vacuum truck being proposed by Miller Envt'l can generate a high vacuum. However, it's not clear to me that they will be using a drop tube in test well, positioned at GW surface for slurping of product/GW and soil vapor, as would be case in DPE system, or if they simply intend to hook up vacuum hose to top of well casing? I'm concerned that if their intention is latter, it would be very difficult to entrain liquids from depth of water table (~45-47 ft. below grade), so test might not properly evaluate whether or not DPE system would be effective at site. Can you check with Miller if they would be able to use drop tube fitted to vac truck's hose for this test, and if they have drop tube long enough to reach GW at 45-47 ft below grade? Also, during test, vacuum response should be measured in wells MW-2, MW-3, MW-4, MW-11 and MW-12 (in addition to wells mentioned in work plan - MW-5, MW-6 & MW-7, which are all approx same distance from test well MW-1), to see how induced vacuum in subsurface varies over distance and get better idea of effective radius of influence. Perhaps after checking with Miller about drop tube issue, work plan can be revised to address that issue and also to add wells I mentioned for vacuum monitoring? - J. Kolleeny 10/26/11: On 10/21/11, received email from Soil Mechanics with attached pdf file of revised High Vacuum Dual Phase Extraction Pilot Test Work Plan (in eDocs). Work Plan involves having Miller Envt'l bring 3,200-gal capacity vac truck to site capable of creating vacuum pressure of 270 inches H2O, connecting vac truck to monitoring well MW-1 (located in center of former UST field) using drop tube positioned at GW surface to slurp product, water and soil vapors. Nearby monitoring wells MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, MW-11 and MW-12 will be monitored for induced vacuums to determine radius of influence; amounts of GW and product recovered will be measured/recorded, and sample of recovered vapors will be collected with SUMMA canister for lab analysis. Data will be evaluated to assess feasibility of using this technology to address contam at site. I sent letter (in eDocs) approving pilot test work plan to Mr. Dominick Tomasino, cc's to Vincent Nantista and Daren Murphy of Soil Mechanics. - JK 03/15/12: On 1/13/12, received pilot test results letter rpt from Soil Mechanics (in eDocs). Did brief review; rpt concludes that soils are too tight for dual-phase hi-vac extraction to be effective, recommends monthly hand-bailing of free product and quarterly monitoring of one down-gradient well which has dissolved-phase conta. Review showed rpt to be missing crucial data, such as induced vacuum measurements in surrounding wells during test. I contacted Soil Mechanics and requested addt'l data. Received data (most of what I requested) on 2/21/12; I combined with earlier letter rpt (in eDocs) and forwarded to Bill Ottoway of DEC Central Office tech support staff, requesting that he or member of his staff assist in review of rpt and its conclusions. Rpt was assigned to Kevin Carpenter to review. On 3/5/12, I received email from Kevin Carpenter with his comments on rpt, plus attached pdf file of rpt with post-it type notes attached throughout (in eDocs). Kevin C. concluded that, altho there were problems with pilot test and rpt, soils at site are so tight that any remedial approach involving trying to pull air or liquids thru soil would involve tremendous energy use with little success in cleaning up spill. He stated that proposed remedy of hand-bailing could be supported if spill is completely delineated, stable and/or shrinking, and there are no sensitive receptors or vapor intrusion concerns. He also mentioned possibility of in-situ thermal (but again, tight soils would limit ability to recover

IFO 900 HYLAN BLVD (Continued) **S103274818**

vapors) and application of K-permanganate by gravity feed. I also discussed his evaluation with him by phone. On 3/15/12, I sent letter (in eDocs) to Mr. Dominick Tomasino of Sand Lane Development Corp. (domtom105@aol.com), cc's to Daren Murphy & Vincent Nantista of Soil Mechanics, stating that DEC agrees that tight soils limit remedial options and we will not require install'n of hi-vac system; approved proposed monthly hand-bailing of product; noted that addt'l wells are needed for delineation and that once delineatin is complete, a quarterly monitoring program using sufficient number/locations of wells should be proposed, with quarterly reporting of product recov efforts and GW sampling data; and noted that if hand-bailing does not succeed in reducing product levels and dissolved-phase concentrations, a plan to apply K-permanganate should be developed. Required work plan for addt'l wells by 4/6/12. - J. Kolleeny
05/25/12: On 5/14/12, received email from Daren Murpy of Soil Mechanics, forwarding to me an email from Vincent Nantista of Soil Mechanics (in eDocs): Jonathan: I am in final throws of preparing remediation plan per your letter of March 15th to Sand Lane Development Corp. I apologize for delay in completing this task and would like, if possible, to work up plan as a final version. To do that, I need your pre-approval of my proposed modification to your scope of work as identified in letter of March 15th. To that end, I need your comments regarding what we had talked about earlier - that is, putting in less than requested 5 monitoring wells. I am including aerial photo for site to go with your marked-up site plan. You can see difficulty with customer access if we block travel path in and out of parking lot. You can also see how closely spaced existing wells are to building as they are visible in aerial photo. I discussed matter with our client. They understandably would like to do as few monitoring wells as possible to cap their costs. From practical perspective, I genuinely believe that if we do one (V-1) in front of stores instead of two as you requested (J-1, J-2); and similarly install one at northerly end of project identified as V-2 instead of two that you requested (J-4 and J-5)*; and finally, if we can eliminate J-3 since we already have MW-9 in place, which is down-gradient and has no evidence of dissolved product, we can provide you with information you need. Doing this will definitely spare Sand Lane Development Corp. added time and expense of these wells, not only in terms of their install'n, but also in terms of future quarterly monitoring and testing. Please provide your comments and, hopefully, approval of this request so that we can finalize our remediation plan and forward it to you for final approval. Attached to email was aerial photo of site plus site plan with addt'l wells marked on it by me (J wells) and alternate well locations suggested by Mr. Nantista (V wells) also marked on it (see email in eDocs). On 5/25/12, I sent email reply (in eDocs): Vincent: I've looked over your suggestions and thought about them, and I'm willing to eliminate my requested well J-3 (using your nomenclature) and combine requested wells J-4 and J-5 into one well you've designated as V-2. However, I think that both requested wells J-1 and J-2 near building are necessary. If there is concern about blocking access to stores with drill rig during install'n, then requested well J-1 can be moved further to north, closer to existing well MW-2. As for controlling quarterly monitoring costs down road, if wells near building show no significant contamination for two sampling events after they're installed, I'd be willing to suspend quarterly sampling of those wells and just ask for them to be sampled once a year until spill

IFO 900 HYLAN BLVD (Continued) **S103274818**

closure. I believe this is a fair compromise, balancing your client's cost concerns with Dept's concerns regarding plume delineation. Feel free to contact me if you have any questions. - J. Kolleeny 06/08/12: On 6/6/12, received email from Daren Murphy of Soil Mechanics: Hi Jon, Vincent asked that I send this e-mail to you in order to clarify whether or not NYSDEC requires sampling and analysis of soil samples during drilling activities associated with install'n of new GW monitoring wells at subject property. Thank you. On 6/8/12, I sent email reply: Hi Daren, Yes, soil should be screened and sampled during well install'n, with boring logs maintained. Please let me know if you have any other questions. - J. Kolleeny 06/22/12: On 6/19/12, received Work Plan for install'n of addt'l wells at site, prepared by Soil Mechanics. Plan proposes installing 3 addt'l wells, as agreed in negotiations between me and Vincent Nantista of Soil Mechanics (see entry above for 5/25/12). I sent letter (in eDocs) to Mr. Dominick Tomasino of Sand Lane Development Corp. (domtom105@aol.com), cc's to Daren Murphy & Vincent Nantista of Soil Mechanics, approving plan but asking that well MW-13 be moved short distance to east (site conditions permitting), away from sidewalk along Hylan Blvd., in order to intercept any contam moving from area of existing well MW-2 toward site building (strip mall). Awaiting more legible version of work plan for upload to eDocs. - JK 06/17/13: Reviewed Investigation Rpt by Soil Mechanics, dated 4/17/13, received 4/30/13 (in eDocs). Rpt summarizes install'n of 3 addt'l wells at site in Jan./Feb. 2013 to delineate areas of product and dissolved contam. Two new wells near on-site retail bldg (MW-13 & MW-14) showed no significant soil or GW impacts, new well installed in area of product plume (MW-15) showed significant soil impacts virtually from surface to water table at ~46 ft bgs, and had free product (0.18 ft in Feb. 2013; 0.36 ft in April 2013). Existing wells at site were also gauged & sampled. Wells MW-1, MW-5, MW-6, MW-7 and MW-12 also had product (MW-12 had 2.70 ft in April 2013). Significant dissolved contam in wells MW-4 (~9,388 ug/L total VOCs) and MW-11 (~50,448 ug/L tVOCs); also MW-2 had 1,259 ug/L tVOCs and MW-3 had 912 ug/L tVOCs. Based on data, Soil Mechanics recommends continued monthly recovery of free product from wells MW-1, MW-5, MW-6, MW-7, MW-12 and MW-15 by manual bailing, and quarterly sampling of GW from down-gradient monitoring wells. Rpt states that Soil Mechanics will evaluate results of these activities and report their findings, along with any recommendations appropriate to bring about spill closure. I sent letter (in eDocs) to Dominick Tomasino (RP), cc's to Daren Murphy of Soil Mechanics, approving continued monthly bailing of product from affected wells and quarterly GW sampling, but specified that wells MW-2, MW-3, MW-4, MW-11, MW-13 and MW-14 be sampled quarterly; and that if a well is ND or has no VOCs above standards for 3 consecutive sampling events (including past events), well may be temporarily removed from quarterly GW sampling program; however, removed wells and wells MW-8, MW-9 and MW-10 should be sampled annually. My letter also required that if wells currently showing product have no product during quarterly gauging event, wells should be sampled and added to quarterly program, and required that monitoring rpts be submitted quarterly and include all historical GW data, product thickness & recovery data, and that GW data tables include line for total VOCs. - JK 09/13/13: In August 2013, RP contacted DEC R2 Director to request a meeting to discuss remedial goals and spill closure requirements. On 9/13/13, met with RP Dom Tomasino of Sand Lane Development Corp., Mike Menicucci (RP's Atty), Vito Fossella of Land Planning &

IFO 900 HYLAN BLVD (Continued) **S103274818**

Engineering Consultants, and Vince Nantista of Soil Mechanics. Representing DEC were Vadim Brevdo (chief of Remedial Section B), Atty John Urda, RD Venetia Lannon, and myself (see meeting sign-in sheet in eDocs as brief). DEC stated that free product must be removed to extent feasible before spill closure can be considered. Vince Nantista of Soil Mechanics claimed it is not feasible to recover free product at this site. DEC suggested approaches that might help expedite product recovery, such as determining product recharge rate and timing recovery events accordingly, and agreed to be flexible with regard to extent of product removal required if data indicate that complete removal is not feasible. It was agreed that more aggressive product recovery would be attempted for a period of time, and that progress would then be evaluated. - J. Kolleeny 11/21/13: Sent email to RP, Dom Tomasino (cc's to Soil Mechanics): Dear Mr. Tomasino: I had an inquiry from our Regional Director regarding status of this site. I realize it's only been a little over two months since we met to discuss free product recovery methods and goals, but can you please provide an update on any work performed since then? Also, I believe site is overdue for quarterly GW sampling, so GW sampling event should be scheduled for near future. Please send an update on this project at your earliest convenience. Got phone call from Mr. Tomasino, who said he and his partner (Vito Fossella) will meet with their engineer next week or week after, and will relay my email and instruct him to gather together data collected to submit as rpt; they will also tell him of GW sampling requirement. - J. Kolleeny 12/20/13: In early December 2012, got phone call from Vince Nantista of Soil Mechanics, saying he would put together rpt to update DEC on status of product recovery at site. I reminded him that dissolved-phase GW sampling needs to be performed, and he said they would do that. On 12/20/13, received email from Lori Moccio of Soil Mechanics, with attached letter from Vince (in eDocs) stating that they've been holding off on submitting update on product recovery in order to do GW sampling as requested, but that GW sampling has now been done and lab data received, so rpt will likely be submitted in early January 2014. - J. Kolleeny 03/19/14: Reviewed Cover Letter (with water elevation profiles and depth to water graphs) dated 2/21/14, plus Monitoring Rpt dated 1/28/14, received on 2/24/14, both prepared by Soil Mechanics (in eDocs). Cover letter summarizes site history, from 2006 Phase I which found site to be former gas station, thru removal of ten 550-gal USTs plus ~850 tons of contaminated soil, install'n of monitoring wells, discovery of product (gasoline) in wells, recovery to date of ~1,180 gals of product by hand bailing, performance of DPE pilot test as required by DEC which showed DPE would likely not be effective at site due to tight soils, and on-going hand bailing of product. Cover letter states, as have earlier submitted rpts, that product is not really free, but held in place by tight soils, and that drilling of wells created conduits allowing product to flow down and accumulate on water table. Product recovery rate is ~5-7 gals per bailing event. Letter asserts that product and small dissolved plume are held on-site by tight soils, and that in light of depth to GW of 38-46 ft, residual captive product and dissolved contam pose no threat to public, and therefore Soil Mechanics requests spill closure. Accompanying monitoring rpt states that on 12/10/13, wells MW-2, MW-3, MW-13 and MW-14 were sampled; free product was ID'ed in wells MW-1, MW-4, MW-5, MW-6, MW-7, MW-8, MW-11, MW-12 & MW-15. Rpt states that product recovery has continued on an approx. monthly basis from

IFO 900 HYLAN BLVD (Continued) **S103274818**

May 2013 thru Jan. 2014. On 1/13/14, they returned for product recovery event and measured 1.50 ft of product in MW-1, 1.26 ft in MW-5, 0.20 ft in MW-7, 0.01 ft in MW-11, 2.11 ft in MW-12, and 0.43 ft in MW-15; wells MW-4 and MW-6 could not be accessed. Total of 7 gals of product were recovered. Dissolved GW data for Dec. 2013 show MW-2 had 328 ug/L total VOCs (down from 1,281 ug/L in Feb. 2013), MW-3 had 420 ug/L tVOCs (down from 927 ug/L in Feb. 2013), MW-13 & MW-14 were ND (same as in Feb. 2013). On 3/7/14, I spoke with Vincent Nantista of Soil Mechanics, I pointed out that they have not implemented more aggressive product recovery schedule as agreed at Sept. 2013 meeting and that spill cannot be closed with over 2 ft of product in one well, over 1 ft in several more wells. On 3/11/14, Mr. Nantista left phone message saying they had returned to site three days after a recovery event and found product recharge of a little less than half thickness measured before recovery, and again bailed wells, and would return again in 3 days. I called Mr. Nantista and explained that I had not requested that they perform product recovery at 3-day intervals. I stated that amount of recharge suggested wells would likely fully recharge within 7 to 10 days, and I suggested that recovery events be performed 3 times a month for 4 to 6 months, at which time progress (if any) in reducing product thicknesses would be evaluated and situation at site reassessed. Mr. Nantista agreed to pursue this course of action. - J. Kolleeny 09/17/14: On 8/27/14, received email from Ginny Cikos of Soil Mechanics, with attached letter, LNAPL thickness & recovery data table, and site plan showing well locations (pdf file, in DecDocs). Data table shows 8-week sequence of weekly product gauging and recovery events, beginning on 6/13/14 and ending on 8/1/14. Data show six wells with measurable free product; on 6/13/14, well MW-1 had 1.00 ft of product, well MW-5 had 1.84 ft, well MW-6 had 1.04 ft, well MW-7 had 0.28 ft, well MW-12 had 4.50 ft, and well MW-15 had 0.23 ft; ~10.5 gals of product were recovered on that date. By last event on 8/1/14, well MW-1 had 0.42 ft, well MW-5 had 0.37 ft, well MW-6 had 0.30 ft, well MW-7 had 0.10 ft, well MW-12 had 0.37 ft, and well MW-15 had 0.01 ft; ~1.07 gals of product were recovered then. Soil Mechanics' letter notes that all wells now have less than 6 inches of product, target criterion established at 9/13/13 meeting, that site has not been a gas station for more than 25 yrs, and that tight soil formation at site prevent migration of product plume. Based on data, letter requests that wells be decommissioned and spill closed. After discussion with Vadim Brevdo (my supervisor) I sent letter (in DecDocs) to Dominick Tomasino (RP), cc's to Mike Menicucci (atty), Vincent Nantista (Soil Mechanics), Venetial Lannon (DEC R2 Director) and Vadim Brevdo (DEC Remedial Section B Chief) stating that before spill can be closed, DEC requires (1) submission of waste disposal manifests for product recovered during 8-week period of weekly recovery events; (2) performance of addt'l round of well gauging to confirm that free product thicknesses have stabilized at less than 6 inches and have not rebounded; and (3) if product thickness in any well has rebounded above 6-inch criterion, product recovery events should resume until it can be shown that product thicknesses remain below 6 inches when wells have been allowed to fully recharge and come to equilibrium. - J. Kolleeny 01/13/15: I sent email to RP Dominick Tomasino (in DecDocs): Dear Mr. Tomasino: I am writing to inquire about status of this spill cleanup project. DEC last issued correspondence re this site on 9/17/14 (see attached). In that letter, DEC requested waste disposal manifests for free product recovered at site in course of

IFO 900 HYLAN BLVD (Continued) **S103274818**

8-week intensive effort of weekly product recovery, and we requested another round of well gauging to confirm that product thicknesses in wells at site have remained below informal target level of 6 inches. Letter stated that if product has rebounded to a thickness of greater than 6 inches in any well, product recovery efforts should resume and continue until 6-inch target level can be maintained as an equilibrium condition. Shortly after issuing this letter, I was contacted by your consultant, Mr. Vincent Nantista, who acknowledged that free product had rebounded to thicknesses greater than 6-inch target level, although he declined to provide specific information about which wells had rebounded and about measured product thicknesses. Mr. Nantista maintained, as he has on other occasions, that it is not possible to bring about significant reductions in product thicknesses at site within a reasonable period of time. I stated that an 8-week period of intensive product recovery is not adequate to conclusively establish feasibility, or infeasibility, of reducing product thicknesses at site, and I repeated my request that an intensive product recovery program (comprising 3 or 4 product recovery events per month) be implemented for 4 to 6 months, at which point DEC will be better able to truly evaluate feasibility of reducing product accumulations in wells at site. Since that conversation, DEC has not received any information about remedial activities at site. DEC is interesting in resolving this open spill case in an expeditious manner, and I remind you that you have signed a Stipulation Agreement which commits you to that same goal. Please acknowledge your receipt of this email and provide a project update at your earliest convenience. - JK 01/14/15: I received email reply from Vincent Nantista of Soil Mechanics: Dear Mr. Kolleeny, I wish you a Happy New Year! In response to your email, please accept my apology for delay in responding to your September [2014] letter. While I don t wish to bore you with details, I encountered a serious health issue which required a hospital stay and subsequent doctor visits. Only reason I mention this is that it impacted my ability to stay course with projects. Sometimes life does that to you, takes you off course. I m happy to say that all is well and I can now redirect my focus back to issue at hand. I hope you understand. You will be receiving my response by next week. - J. Kolleeny 03/03/15: On 2/26/15, I received letter from Soil Mechanics dated 2/23/15, with attached data table showing 8 weekly well gauging/product recovery events from 6/13/14 thru 8/1/14, plus a 9th well gauging/product recovery event performed on 11/13/14. Nov. 13th event shows all 6 affected by free product having LNAPL thickness of less than 0.5 ft, similar to results of 8/1/14 gauging event: well MW-1 had 0.46 ft (up from 0.42 ft on 8/1/14), well MW-5 had 0.45 ft (up from 0.37 ft on 8/1/14), well MW-12 had 0.45 ft (up from 0.37 ft on 8/1/14). Table includes no indications of site visit with well gauging event in late Sept. or early Oct. 2014 discussed with Mr. Vincent Nantista in phone conversation, in which he acknowledged that product levels in some wells had rebounded back above 6 inches. Letter requests spill closure. On 3/3/15, I sent email to Mr. Nantista: Dear Mr. Nantista: Thank you for your letter dated Feb. 23, 2015 pertaining to this spill site, accompanied by well gauging and product recovery data table, waste manifest and disposal certificate. As stated in your letter, well gauging table presents free product thickness data showing that on Nov. 13, 2014, six site wells impacted by free product all had less than 6 inches of product. I have a number of questions and comments about letter and accompanying data. First, on

IFO 900 HYLAN BLVD (Continued) **S103274818**

Sept. 17, 2014, I sent a letter to Mr. Dominick Tomasino in response to a document you had submitted summarizing 8 weekly free product removal events, culminating in product thickness measurements of less than 6 inches in impacted wells. In my letter, I asked that you return to site and gauge wells to confirm that product thicknesses had remained below 6 inches as an equilibrium condition. Shortly after sending my letter, I received a phone call from you. During our conversation, you stated that you had gauged wells again, and that product levels in some wells had rebounded above 6-inch target thickness (altho you were not specific about which wells or about measured product thicknesses). However, well gauging event you mentioned in our phone conversation does not appear to have been reported in data table accompanying your letter of Feb. 23, 2015. Second, well gauging data table which accompanies your 2/23/15 letter does not clearly indicate whether product thickness measurements taken on 11/13/14 were taken before or after removal of free product from wells (table does indicate that free product recovery was performed on that date). I believe that my letter of 9/17/14 makes clear that 6-inch product thickness target level should be an equilibrium condition (i.e., a measurement taken long enough after a product recovery event to have allowed product to fully recharge into wells) as a prerequisite for consideration of spill closure. Finally, DEC requires that all submissions be accompanied by an electronic version of submission; your 2/23/15 letter with data table and waste disposal documents was not accompanied by a pdf file of these documents. DEC requests that you please revise and resubmit 2/23/15 letter and accompanying data table to include any and all well gauging events performed at site between 8/1/14 and 11/13/14, and with explanation in letter s text affirming that product thickness measurements taken on 11/13/14 were taken before any product removal was performed on wells. Revised letter and data table should be accompanied by a compact disk with a pdf file of letter, data table, and waste disposal documents for upload to our database. In event that 11/13/14 product thickness measurements were taken after product removal was performed on wells, please return to site and gauge wells again, prior to performing any product recovery and at least 7 days after any product recovery has been performed, and report results to DEC. Please feel free to contact me if you have any questions or concerns. - J. Kolleeny 03/19/15: Received CD with pdf files of Soil Mechanics' 2/23/15 letter with well gauging data table, waste manifest and disposal certificate, plus revised version of 2/23 letter, re-dated 3/16/15. Revised letter includes an addt'l sentence stating that 11/13/14 well gauging measurements presented in data table were collected prior to recovering product from wells, like all other such measurements. However, table was not revised to include any gauging data for an event between 8/1/14 and 11/13/14, which was discussed in conversation I had with Mr. Nantista in late Sept. or early Oct. 2014, in which he acknowledged that product thicknesses had rebounded above 6 inches. I called Mr. Nantista and noted absence from table of addt'l gauging data from event discussed in our phone conversation; he stated that he could not recollect details of our conversation and that he had no other well gauging data, nor any record of a gauging event conducted between 8/1/14 & 11/13/14. He said that he was preparing another letter to send to DEC explaining difficulties in measuring depths to product and/or water table and difficulties in recovering product at site, due to complex Staten Island subsurface lithology with fine-grained soils and unexpected

IFO 900 HYLAN BLVD (Continued) **S103274818**

differenced in water table elevation from one well to next. I stated I would like to see another well gauging event to confirm that product levels have remained below 6 inches as an equilibrium condition, under different seasonal water table conditions. Mr. Nantista stated I should make this request in writing. I said I would do so after receiving letter he said he was preparing. - J. Kolleeny 03/24/15: I sent email to Kevin Hale of DEC Central Office, asking if DEC has any standard or guidance regarding how many well gauging events are required (and at what time intervals) to establish that LNAPL has been successfully removed from monitoring wells at a site. Kevin Hale sent email response stating that a rule of thumb was four quarters of gauging. He added that appearing/disappearance of LNAPL is often keyed to water table elevation, with LNAPL reappearing at sites during times of drought and lowered water table elevations. - JK 03/30/15: Received email from Ginny Cikos of Soil Mechanics, with attached pdf file of letter from Vincent Nantista of Soil Mechanics dated 3/17/15 (in DecDocs). Letter acknowledges receipt of my 3/3/15 email response to their 2/23/15 letter rpt; letter states that Soil Mechanics' SOP for all well gauging/product recovery events at site (including event of 11/13/14) was to first measure depths to product & GW to determine product thicknesses, then to bail product from wells into 55-gal drum. Letter states that product recovery efforts at site have been going on for almost 7 yrs, states that they have complied with all my requests to accomplish goal of accelerating product recovery [JK-actually, they never performed 4 to 6 months of intensive product recovery as I requested on several occasions, including 9/13/13 meeting]; letter states that hydraulic dynamics at site are complicated due to soil profiles, that water table depth varies over time, changing hydraulic gradient across site and affecting product thicknesses in wells, which letter writer describes as seepage product as opposed to my use of free phase or floating product [I had discussed Mr. Nantista's insistence on this distinction with Kevin Carpenter of DEC Central Office, who discounted this distinction and stated that if product can drain from soil pores and accumulate in wells, it is free product - JK]. Letter further states that product plume is very small and has not migrated, as spill must've occurred more than 25 yrs ago, and that remaining product is virtually being held captive by fine-grained soils, which make product recovery painfully slow despite aggressive efforts which have been made. Letter then states, in apparent reference to JK's phone conversation with Mr. Nantista in Fall 2014 in which Nantista acknowledged significant rebound of product above 6 inches, that While this writer recollects speaking with Mr. Kolleeny about product depths, he does not recollect specifics of that conversation nor do we have any other data than that presented in rpts. Letter says they hope DEC is satisfied with their efforts to allow closure of spill case. - J. Kolleeny 04/06/15: I prepared and issued letter (in DecDocs) to RP Dominick Tomasino, cc's to Venetia Lannon (RD) and Vadim Brevdo of DEC, Vincent Nantista of Soil Mechanics, and Mike Menicucci (RP's atty), responding to Soil Mechanics' letter of Feb. 23, 2015 with accompanying well gauging data and SM's letter of March 17, 2015. My letter stated that DEC acknowledges difficult soil conditions at site, which is why we are considering spill closure request in spite fact that free product at site has not been reduced to trace or ND levels, as is commonly done prior to petitioning DEC for spill closure. Letter states that DEC's usual practice is to require 4 quarters of well gauging to confirm removal/reduction of

IFO 900 HYLAN BLVD (Continued) **S103274818**

product under different seasonal conditions, and therefore, since last gauging event was in Nov 2014, DEC requires one addt'l gauging event to confirm that product levels have been reduced to less than 6 inches as an equilibrium condition. Letter asks that all site wells, including those which do not exhibit product, be included in this gauging event, and that results be presented in a letter rpt including gauging table with data for all wells from 9 gauging events performed from June to Nov 2014, and with addt'l columns providing TOC elevations, depth to water & product measurements, and water table elevations, to evaluate changes in water table els and effects (if any) of seasonal water table fluctuations on product thicknesses. Letter states that rpt should also include a water table contour map based on measurements from upcoming well gauging event, to confirm current GW flow direction at site. Finally, letter states that if upcoming gauging event shows that product thickness in any well has rebounded above 6 inches, product recovery events should resume until product thicknesses remain below 6 inches when wells have been allowed to fully recharge and come to equilibrium for minimum of 2 weeks after bailing of product from wells. - J. Kolleeny 05/29/15: Received email from Ginny of Soil Mechanics, sent on behalf of Vincent Nantista. Attached to email are letter stating that wells were gauged on 4/20/15 and all six wells that have historically shown product had less than 6 inches, and data table showing depth to water, depth to product, product thickness and product recovered measurements for six wells (MW-1, MW-5, MW-6, MW-7 & MW-12). Letter requests spill closure. I sent email reply: Dear Ginny and Mr. Nantista: Thank you for your letter and accompanying data table. I have attached a copy of my letter dated April 6, 2015 for your reference. Please note that page 2 of letter includes following paragraph: The results of addt'l well gauging event should be presented in a letter rpt with a well gauging data table. Table should include data for all site wells from nine gauging events performed from June to Nov. 2014, and should include addt'l columns providing top of well casing elevation measurements, depth to water and depth to product measurements, and water table elevation measurements, in order to evaluate changes in water table elevations and effects (if any) of seasonal water table fluctuations on product thicknesses. (Product recovery data should be presented in a separate column in table.) Letter rpt should also include a water table contour map based on water table elevation measurements from upcoming well gauging event, to confirm current GW flow direction at site. Data table you have submitted today only includes data for wells which have historically exhibited free product; my April 6, 2015 letter required well gauging data for all site wells (including wells which do not exhibit free product). Letter also required that data table include columns providing Top of Casing Elevations for each well, and Water Table Elevations for each well. Finally, letter required that a water table contour map based on most recent gauging data (i.e., April 20, 2015) accompany well gauging data table. Please revise data table to include missing columns and gauging data for all site wells, and prepare a water table contour map showing up-to-date local GW flow direction, and re-submit these documents. Feel free to contact me if you have any questions. - J. Kolleeny 06/04/15: On 6/3/15, received email from Ginny Cikos of Soil Mechanics, sent on behalf of Vincent Nantista of Soil Mechanics, with attached letter (revised from 5/29/15 letter), plus attachments: data table for six wells impacted by product, with depth to product, depth to water,

IFO 900 HYLAN BLVD (Continued) **S103274818**

product thickness and product volume (recovered) measurements; data table listing all site wells (MW-1 thru MW-15), with depth to product, depth to water and water table elevation measurements (no column for product thickness); GW contour map dated 4/22/13; and small topo map of site area showing land contours. I sent email noting that GW contour map should be based on most recent gauging data from 4/20/15. On 6/4/15, Ginny re-sent all documents; email states that date on GW contour map was a typo, revised map is dated 4/22/15. Letter plus attachments are in DecDocs. Table with data for six product-impacted wells shows that on 4/20/15, well MW-1 had 0.44 ft of product and 0.25 gals of product were recovered, well MW-5 had 0.38 ft of product and 0.25 gals were removed, well MW-6 had 0.26 ft of product and 0.12 gals were recovered, well MW-7 had 0.15 ft of product and 0.12 gals were recovered, well MW-12 had 0.30 ft of product and 0.38 gals were recovered, and well MW-15 had 0.01 ft of product and no measurable gals of product were recovered. Table with data for all site wells shows that wells MW-2, MW-3, MW-4, MW-8, MW-9, MW-10, MW-11, MW-13, and MW-14 had no product detected. GW contour map shows GW flow to NNE (toward off-site well MW-8, consistent with past measurements. I will review further and confer with other staff. - J. Kolleeny 06/29/15: I sent email to RP Dominick Tomasino, Ginny Cikos of Soil Mechanics, and att'y Michael Menicucci, cc to Vince [Nantista] @Soil Mechanics: Mr. Tomasino: Sorry for delay in responding to Soil Mechanics last submission. Because this project is somewhat unique among those I ve worked on, I wanted to check with senior staff in DEC Central Office before proceeding with spill closure. I d like to meet at site with Soil Mechanics staff and check wells one more time to confirm that product levels have remained below 6 inches. Either tomorrow (Tuesday June 30th) or Wednesday July 1st would be good for me, at about 10:30 or 11 A.M. (I could also meet in early afternoon if that s more convenient). Please let me know if someone from Soil Mechanics can meet me at site tomorrow or Wednesday. I received phone call from Vincent Nantista, who said Tuesday (6/30/15) would be difficult, but Wednesday (7/1/15) would be good; we agreed to meet at site on 7/1/5 at 10:30 A.M. - J. Kolleeny 07/28/15: After 7/1/15 site visit, received Soil Mechanics' data tables and write-up letter on 7/10/15; requested revisions and corrections. Received revised letter requesting spill closure on 7/23 and revised/corrected data tables on 7/28/15. Will review data & respond. - JK 11/06/15: Sent letter to RP Dominick Tomasino (cc's to John Urda of DEC R2 Office of General Counsel and Michael Menicucci, Mr. Tomasino's att'y), stating that spill closure is not approved as DEC has determined that significant product thicknesses remain in several wells. Letter requires submission of new RAP to address petroleum impacts by Dec. 18, 2015. - JK 12/16/15: On 12/9/15, I received letter dated 12/3/15 (in DecDocs) from Michael Menicucci, RP's att'y, stating that RP has retained a new envt'l consultant, Ireland Brook Enterprises, LLC, requesting extension of 12/18/15 deadline for submission of new RAP, and requesting meeting with all parties to discuss outstanding issues at site that must be addressed. On 12/16/15, after R2 Regional Att'y Karen Mintzer spoke with Menicucci, I sent email to RP Dominick Tomasino, cc's to Karen Mintzer and John Urda of DEC R2 Office of General Counsel and to Menicucci: Dear Mr. Tomasino: I have received a letter from your att'y, Mr. Michael Menicucci, informing Dept that you have retained a new envt'l consulting firm and requesting that 12/18/2015 deadline for submission of new RAP for this spill site be extended. It is my

IFO 900 HYLAN BLVD (Continued) **S103274818**

understanding that Mr. Menicucci spoke with our Regional Att'y Ms. Karen Mintzer today and that Mr. Menicucci will propose dates for a meeting with all concerned parties in Jan. 2016. 12/18/2015 deadline for submission of a new RAP is suspended; a new due date will be discussed when we meet in Jan. 2016. Feel free to contact me if you have any questions. - JK 01/06/16: DEC remediation staff (Kolleeny & Brevdo)and legal staff (Mintzer & Urda) met with property owners Dominick Tomasino and Vito Fossella, their att'y Michael Menicucci and new consultant James Johnston of Ireland Brook Enterprises. Menicucci asked for clarification of DEC s 11/6/15 letter which stated that DEC s investigations confirmed substantial product thicknesses remaining in several site wells. DEC explained that they had gauged wells at site in June 2015, finding more than 3 ft of product in one well, more than 2 ft in another well, and more than 1 ft of product in a 3rd well. DEC stated that a new RAP must be prepared which will aggressively target free product at site and reduce product levels to extent feasible, suggesting that addt'l investigation, possibly including install'n of addt'l wells, may be helpful in developing a plan. New consultant Johnston asked when DEC would require new RAP; DEC responded they will issue a letter setting a deadline for RAP submission in mid-February 2016. Johnston and Menicucci asked if DEC would provide their well gauging data. DEC legal staff responded that they will consider this request. - J. Kolleeny 01/14/16: After conferring with Urda & Mintzer of R2 Office of General Counsel, I sent letter (in DecDocs) to RP Tomasino, cc's to Fossella, att'y Menicucci, and consultant Johnston of Ireland Brook Enterprises, stating that as discussed at 1/6/16 meeting, DEC requires a new RAP proposing actions to address petroleum impacts at site, with deadline of 3/4/16 for RAP submission. Letter also stated that regarding request for DEC's data, I have been advised by DEC legal staff that data are not available for release at this time, as under FOIL, documents related to a law enforcement investigation may be withheld from disclosure. - JK 02/19/16: Reviewed Remedial Investigation Work Plan prepared by Matrix New World Engineering, P.C. and dated 2/12/16 (in DecDocs). Work Plan summarizes past investigations at site and proposes addt'l investigation to enable preparation of a suitable RAP. Addt'l investigation will involve geophysical survey to identify subsurface utilities and look for unknown USTs, gauging of all wells for depth to GW and product thicknesses, collection of GW samples from wells MW-2, MW-3, MW-4 & MW-11 to evaluate dissolved impacts, and performance of a laser-induced fluorescence (LIF) investigation to delineate NAPL distribution in subsurface. LIF survey will involve 5 initial direct-push borings and 6 secondary borings. After evaluating results, Matrix will prepare & submit a Remedial Investigation Rpt / RAP within 8 weeks of completion of investigation. I sent letter (in DecDocs) to RP Dominick Tomasino, cc's to Karen Mintzer & John Urda of DEC OGC, Michael Menicucci (RP's atty), Vito Fossella (RP's associate) and James Johnston of Ireland Brook Enterprises, approving work plan but requesting that an addt'l LIF boring be advanced in sidewalk west of MW-12 (if feasible), that LIF results be used to determine locations for addt'l permanent wells for NAPL recovery, that if significant GW contam is found in either well MW-2 or MW-3, then wells MW-13 & MW-14 also be sampled; and extending deadline for RAP submission from 3/4/16 to 4/29/16. - JK 03/14/16: Received email from Jim Johnston of Ireland Brook Enterprises with update on LIF investigation at site. Email and attachments (in DecDocs) indicate

IFO 900 HYLAN BLVD (Continued) **S103274818**

they drilled 7 LIF borings and found significant spikes in two borings (LIF-3 and LIF-5). Well gauging on 3/8/16 found measurable free product in six wells: well MW-1 had 1.15 ft, well MW-4 had 0.17 ft, well MW-5 had 5.88 ft, well MW-6 had 1.35 ft, well MW-7 had 0.67 ft, well MW-12 had 4.06 ft. Dissolved GW samples were collected from 3 wells. Email states that they are evaluating LIF data and waiting for GW results; once they have all data they will send to me and arrange a conference call to discuss a path forward to developing a RAP. - J. Kolleeny 05/02/16: I sent email to Jim Johnston of Ireland Brook Enterprises: Jim, Can you tell me status of this project? Your 3/14/16 email stated that once you had all data from LIF investigation, you would forward data & contact me to discuss RAP, but I never got any other data and I wasn t contacted. Deadline for submission of RAP was last Friday [4/29/16]. Please let me know project status ASAP. Jim sent reply: Jonathan, I needed to meet with client to confirm our RAP approach before we could finalize document. We were able to meet on last Wednesday. My fault for not getting you remainder of data (oversight on my part). We will have final RAP to you Wednesday [5/4/16]. We are proposing an aggressive vacuum extraction program using stingers and knockout pots within a manifold system that will be attached to wells that have historically exhibited product to date. This is similar to a system that I believe you were involved with out at JFK. Once you review, we can then conference call to discuss path forward. I sent reply: Jim, Thanks for getting back to me. While I m in favor of implementing an aggressive remedial approach, depth to GW at this site is much greater than at JFK. Do you know that a hi-vac system will be able to recover LNAPL from depth of ~45 ft below grade, and that tight soils won t prevent system from functioning properly? Previous consultant performed a dual-phase extraction pilot test using a vac truck and concluded that such a system wouldn t work at site. I m not sure they performed test correctly, but I want to be sure that system you re proposing will be able to function before approving it. Anyway, I look forward to receiving final RAP. Jim replied: Jonathan, group we intend to use claims it will work under conditions that exist. We intend to pilot it as part of RAP. I just don t see any better way of reducing free product in a timely fashion. Continuous skimming will take forever, and surfactants will not be effective until we are able to knock free product down to a manageable level. I think it is worth a shot. We discussed pros & cons with our Client and they understand and are willing to try it in order to move this forward. I replied: Okay, thanks. - J. Kolleeny 05/23/16: Reviewed Remedial Investigation Rpt & Remedial Action Plan by Matrix New World Engineering, P.C. dated 5/5/16 (received by email on 5/6/16). Rpt presents results of well gauging & sampling on 3/8/16, GPR survey, and LIF soil investigation. GPR survey did not find any unknown USTs. Rpt states that well gauging found measurable LNAPL in 4 wells: MW-1, MW-5, MW-7 & MW-12. Gauging data table lists LNAPL thicknesses, shows MW-1 had 1.15 ft, MW-5 had 5.88 ft, MW-7 had 0.67 ft, & MW-12 had 4.06 ft; data table gives depth to product and water measurements for wells MW-4 & MW-6, but product thickness column shows 0.00 ft of product in those wells (conflicts with data table sent on 3/14/16, which showed measurable product in six wells, with 0.17 ft in MW-4 and 1.35 ft in MW-6). Results of LIF investigation suggest LNAPL present at boring LIF-1 (ID'ed as motor oil), LIF-3 (ID'ed as gasoline or diesel) and LIF-5 (ID'ed as motor oil). GW sampling showed dissolved impacts at MW-2, MW-3 & MW-11 (altho it seems lab didn't analyze for usual

IFO 900 HYLAN BLVD (Continued) **S103274818**

STARS/CP-51 gasoline compound list). Worst was MW-11 with ~1,000 ug/L total BTEX (other compounds also detected). Rpt concludes that dissolved GW impacts are not migrating. Based on data, Matrix recommends semi-ann GW sampling, and using existing wells for vac extraction product recovery, performed monthly for 3 months and then quarterly; after 1 yr, results will be evaluated and if approach has not been effective, a more aggressive approach such as application of surfactants will be considered. If LNAPL is reduced to less than 6 inches in all wells for minimum of 6 months, they will petition for spill closure. I sent email to Jim Johnston of Ireland Brook Enterprises pointing out discrepancy between this rpt and data I received in March re which wells have LNAPL, and stating that rpt seems to suggest use of vac truck instead of hi-vac system he indicated would be proposed in his 5/2/16 email. I stated that brief remedial approach suggestion at end of rpt doesn't constitute a RAP as required, and that monthly vac truck recovery was attempted by previous consultant and found to be ineffective. I asked that he clarify and expand on remedial approach, resolve LNAPL in wells discrepancy, and submit revised RAP. Jim stated he would review my comments and get back to me. - J. Kolleeny 05/26/16: I sent email to Jim Johnston: Jim, when I can expect to hear from you regarding issues I raised about RIR/RAP? I'd like to issue a formal response, but I wanted to confirm several things first, such as actual number of wells with measurable free product when wells were gauged in March (4 vs. 6), whether remedial proposal is to use a vac truck for product recovery events, and if so, why there was a change from idea of installing a manifolded hi-vac system (which was my understanding based on email from you in early May) to use of a vac truck. Also, what sort of pilot testing do you have in mind? I also wanted to ask why results of LIF investigation were not used to propose addt'l wells at locations where indications of LNAPL found? If purpose of LIF investig was not to determine locations for addt'l product recovery wells, then what was point of that investigation? In what way have results of that investig been incorporated into current remedial proposal? It would be helpful if we could discuss these issues by phone. Please call me at your earliest convenience. - J. Kolleeny 05/27/16: Received reply from Jim Johnston: Jonathan, We had a team meeting yesterday and have begun revision of RIR/RAP to address issues you noted and to fortify RAP portion of rpt. We are working with subcontractor to provide more detail on process, as well as method we will use to optimize recovery efforts. It has been our belief from beginning that having a 24/7 high-vacuum recovery system would not be efficient due to anticipated low recharge of formation. Due to vacation schedules, we don t think we can get a draft redline rpt to you for discussion until Wednesday [6/1/16]. We can then schedule a conference call for Thursday [6/2/16]. Hopefully this works for you? I sent reply: Jim, Yes, Wedn/Thurs of next week would be fine to send a draft rpt and have a conversation about remedial approach. - JK 06/02/16: Received email from Mindy Chassin Horowitz of Matrix New World Engineering, P.C., with attached revised RIR/RAP dated 6/1/16. RAP includes revised remedial proposal, involving vacuum truck recovery (VER) of product using stingers installed in 6 LNAPL-impacted wells, manifolded together with hoses to vac truck; clear tubing will be used so LNAPL can be observed and stingers can be adjusted for optimal product recovery. Proposed schedule is to vac 6 hrs/day for 5 days in 1st week, gauge wells middle of 2nd week, vac 3-5 days in 3rd week, gauge wells middle of 4th week, vac 1-5 days in

IFO 900 HYLAN BLVD (Continued) **S103274818**

5th week, gauge wells middle of 6th week; after that, VER frequency will be evaluated based on results, with VER projected to continue weekly for 6 months, after which effectiveness will be evaluated with DEC. If VER is found to not be effective, a more aggressive approach, such as introduction of surfactants, will be considered. On 6/2/16, I participated in conference call with Jim Johnston of Ireland Brook Enterprises and Mindy Horowitz of Matrix, to discuss revised RAP. It was agreed that they would perform a VER pilot test, with follow-up well gauging to determine product recharge rate and optimal schedule for VER events, and revise RAP based on results. They also agreed to consider my suggestion of installing addt'l and/or larger diameter recovery wells, and to consider install'n of continuously operating product skimming system if VER is not effective. Pilot test originally scheduled for 6/27/16, but rescheduled for 7/12/16. - JK 07/12/16: Visited site to observe VER pilot test. Mark Sprengel & Tiffany (last name?) of Matrix were on-site. Gauging of wells prior to VER showed well MW-5 had more than 8 ft of product, MW-12 had 4.62 ft, and three other wells had a foot or more of product. Vac truck spent 20-30 minutes vacuuming each impacted well. Matrix field staff will return to site at intervals of 1, 3 & 7 days to check on product recharge rate. A slug test was also performed on a well without product to evaluate hydraulic conductivity of local aquifer. - J. Kolleeny 08/01/16: On 7/21/16, Jim Johnston of Ireland Brook Enterprises sent email: Jonathan, Sorry I missed you at site. Field crew told me you showed up shortly after I left. By all accounts VER went very well. Only hiccup was that dumpster was on top of MW-4 and could not be moved in time for VER. Appended is product recovery & rebound data for wells. Based on rebound to date, I believe it makes sense to go out next Tuesday again and see where we are. We will also gauge and hand bail well #4 (if there is any product). We performed 2 slug tests and are evaluating data on those. In addition, we are estimating amount of product and water in each well column versus final volume of product/water removed by VER contractor to determine how successful we were in inducing product removal from formation outside wells. This will help determine efficacy of VER efforts vis a vie hand bailing or other passive methods. Of note (and I know that you've mentioned this before) is dramatic difference in product in wells (photo attached). Given this condition, we will recommend to client that we do fingerprinting on two different products. I am concerned that there may be an off-site source impacting site. After we gauge and bail on July 26th, we would like to have a quick call on 28th to discuss all results and a path forward prior to issuing rpt. Hopefully you'll be available? On 8/1/16, I sent email reply: Jim, Thanks for update and product recharge data. Did you return to site on July 26th, and were you able to gauge well MW-4? Sorry I was out of town and could not discuss results with you on July 28th; I ll be in office all week so let me know when you d like to talk about data. As for different appearance of LNAPL, by all means it makes sense to do fingerprint analysis and age-dating of product. However, I don t know of any other potential sources in area, and that coupled with fact that there seems to be very little migration of product (for instance, towards on-site down-gradient wells between wells with LNAPL and shopping center), due most likely to tight soils below site, I think it s unlikely that there s an off-site source. Was a Phase I ever done for this property? If not, it might be worth getting a set of Sanborn Maps and searching City databases to see if there were any other gas stations in immediate area in past. It s

IFO 900 HYLAN BLVD (Continued) **S103274818**

possible that different tanks or piping at site began to leak at different times, and/or that amount of organic matter in subsurface soils varies laterally, either or both of which might help explain different appearance of LNAPL. And I still think it would be worth trying to put in some addt'l wells near MW-12 (which has light-colored LNAPL) to try to delineate product in that well. (I know you can t drill in sidewalk, but perhaps you could drill wells near MW-12 in area of soil along edge of parking lot.) Please keep me posted and let me know when you d like to talk. Well gauging data and LNAPL photo are in DecDocs as brief. - JK 08/29/16: Received email from Jim Johnston of Ireland Brook Enterprises: Jonathan, wanted to update you on progress at 900 Hylan Blvd & see if you would be available for a conference call on Thursday [9/1/16]. Below is some of our progress to date. " High vac extraction was performed on 7/12 Went well. " We also did permeability testing on 7/12 results show a higher value than we would have expected, given tightness of soil. " We returned on 13th, 15th, 19th & 27th [28th?] to gauge wells and measure free product recovery [recharge]. Surprisingly, by 28th, MW-5 (worst well) had only rebounded from 5+ ft to 1.92 ft. Gauging data attached [in DecDocs as brief]. " We also did product fingerprinting (MW-5 & MW-12 (clean product)) and lab reported that both samples are mixtures of gasoline & diesel, with MW-5 having more diesel than MW-12. They opined that difference in color could be attributed to different mixtures, or interactions of products with organic material in soil. Diesel portion of both samples are from same source. They were not able to easily tell same about gasoline portions. They don t recommend any addt'l analyses on these samples as presence of diesel would bias results. " Given slow rebound that we are seeing, we are thinking of recommending installing a passive skimmer system (http://www.qedenv.com/Products/Recovery/Passive_Skimmer_Overview), and would like to hear your thoughts. " To increase recovery and hasten closure, we may install a 6 or 8 well to replace MW-15 (appears to have failed), since we will need to replace this well anyway. Please let me know if you will be available on Thursday [9/1/16] to discuss. I sent email reply: Jim, Thanks for update with addt'l data, and for your thoughts on how to proceed from here on this project. I m available on Thursday [9/1/16] for a conference call to discuss these issues. I have a couple of thoughts on your comments. First, if slug tests gave higher permeability values than you were expecting, I m surprised that you re giving up on idea of VER (or something like a combination of surfactant injections and VER). I checked out link you provided to passive skimming system, and if I m understanding it correctly, this would be my least favored option for site (after VER or even hand-bailing). Passive skimmers usually have a capacity to hold only a gallon or even 1/2 gallon of LNAPL, which must be manually retrieved and emptied, so I don t see how this would be an improvement over hand bailing, and would require fairly frequent site visits to empty accumulated product. Technology I ve suggested in past is a Spill Buster, which pumps LNAPL to a holding tank when its reservoir is filled, so it can operate more or less continuously without requiring frequent site visits to retrieve and empty product. Here s a link: http://cleanearth.biz/products/magnum-spill-buster/ about-magnum-spill-buster/ Second, while I agree that well MW-15 must be replaced if it s become unusable, and I like idea of installing larger diameter wells at site to facilitate product recovery, I m not sure if that s optimal location for install'n of a 6- or 8-inch

IFO 900 HYLAN BLVD (Continued) **S103274818**

diameter well; it might make more sense to put in a larger well(s) at location(s) of MW-5 and/or MW-12, which seem to have greatest product accumulations at site. And as I believe I have mentioned several times in past, I still believe it would be worthwhile to install 1 or 2 delineation wells near MW-12 in strip of soil along north edge of parking lot, to see if there is more recoverable product in that area of site (unless there are site constraints such as overhead obstructions that would prevent drilling in that area). We can discuss these issues and others on Thursday. Please let me know best time for conference call. We agreed on 3 pm for call on 9/1/16. - JK 08/31/16: I sent email to Jim Johnston of Ireland Brook Enterprises, cc's to Mindy Chassin Horowitz, Ed Sullivan & Brian Crespi of Matrix: Jim, is there any chance your staff could return to site and gauge wells one more time prior to our conference call tomorrow afternoon? Last gauging event was more than a month ago. I realize this is very short notice, but I think data would be very useful for our discussion. They could save a little time by only gauging wells that had measurable product on July 28th. Please let me know if this can be done; if not, we ll work with data you already have. Thanks. Jim sent reply: Jonathan, Yes, we will send somebody out to site to gauge wells. By time we get data & have it plotted it will probably be towards end of day. Accordingly, we should probably reschedule our conference call for Tuesday [i.e., Sept. 6th]. Are you available around 10 a.m.? I replied that they should call in at ~11 a.m. on Tuesday Sept. 6th. - J. Kolleeny 09/06/16: Had conference call with Jim Johnston of Ireland Brook Enterprises and Mindy Chassin Horowitz of Matrix New World Engineering. Mindy explained that product skimmer pumps they propose to use have storage capacities ranging up to 4 gals (equal to ~1.5 feet of LNAPL in well and well pack); since follow-up well gauging after vac truck pilot test showed it took 9 days for well MW-5 to recharge that amount, if New World monitors site wells weekly they should be able to empty skimmer before it fills completely. They stated that well MW-15 is damaged and cannot be accessed, so they propose to replace it. They also propose to install a large-diameter (6 -8) well between MW-5 and MW-12 to assist in LNAPL recovery. I urged that they also install a well in strip of soil MW-12 is located in, about 10 ft to north of MW-12, to better delineate LNAPL plume. They agreed to this. I asked that they prepare and submit a brief work plan for install'n of 3 addt'l wells, and after wells have been installed they should complete preparation of a new RAP. - J. Kolleeny 10/04/16: On 9/30/16, sent email to Jim Johnston of Ireland Brook Enterprises, cc to Mindy Chassin Horowitz of Matrix New World Engineering: Mindy and Jim, I was expecting to receive a work plan for install'n of addt'l wells at this site soon after our last conference call. Can you update me on status of this project and well install'n work plan? Been almost a month since conference call& On 10/4/16, I sent another email: Jim, I wanted to confirm if you received my email below, sent last Friday? I am concerned that progress on this project appears to have stalled since our last conference call. Please let me know if you received my email, and please provide an update on status of project. If there s something holding things up, I need to know that. Jim Johnston sent reply: Sorry Jonathan. Could have sworn I sent you a reply. Our client was not prepared for magnitude of cost for addt'l work we discussed moving forward. They are evaluating same, and I will let you know when we have any addt'l information. I am suggesting that they just release us on well install'n at this point. - JK 10/13/16:

IFO 900 HYLAN BLVD (Continued) **S103274818**

Having heard nothing further from RP or his consultants, I sent letter (in DecDocs) to RP Dominick Tomasino, cc's to John Urda of DEC OGC, Michael Menicucci (RP's atty), Vito Fossella (RP's associate), James Johnston of Ireland Brook Enterprises, and Mindy Chassin Horowitz of Matrix, stating that results of VER pilot test have not been formally submitted, and requiring submission of a new RAP by 11/10/16. Letter stated that new RAP should propose actions to aggressively target product at site, & should include proposals to replace any damaged wells & install addt'l wells to better delineate product plume and assist in product recovery. Stated that failure to submit RAP by 11/10/16 will be Stip violation. - JK 11/30/16: Reviewed Remedial Investigation Work Plan prepared by Matrix New World Engineering, P.C., dated 11/14/16, received same date (in DecDocs). Work plan summarizes VER pilot test performed at site in July 2015. Based on results, Matrix concludes that use of a vac truck for product recovery at site will not be cost-effective. Instead, plan proposes install'n of passive skimmers in each well with measurable product and weekly maintenance of skimmers as an IRM. Work plan also proposes install'n of 3 addt'l monitoring wells: one to replace damaged well MW-15, one well to better delineate of product plume, and a large-diameter well to enhance product recovery efforts. After install'n, new & existing wells will be surveyed to provide accurate data for GW elevation modeling. A round of GW samples will be collected from a selection of wells which do not contain product to evaluate dissolved GW contam. Work plan includes a schedule stating that new wells will be installed within 3 weeks of DEC approval of plan, followed by GW sampling and install'n of passive skimmers. If skimmers prove to be effective for product recovery, Matrix will continue their use & provide details in a RAP. An RIR/RAP summarizing these activities will be prepared & submitted to DEC within two months of well install'n. I sent letter (in DecDocs) to RP Dominick Tomasino, cc's to John Urda of DEC OGC, Michael Menicucci (RP's atty), Vito Fossella (RP's associate), James Johnston of Ireland Brook Enterprises, and Mindy Chassin Horowitz of Matrix, approving work plan and requiring submission of RIR/RAP by 2/28/17. - J. Kolleeny "

Remarks: "unknown amount spilled; found contaminated soil during tank removal; samples will be taken; will investigate futhur; there are 10 550g tanks on property;"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ e2MIS 147048 2/4/03 ... 1115 hrs. Employee F. Gerdes, responding to ticket SE03001137, discovered that a 50kva OH transformer i/f/o # 38 Pouch Terrace, had leaked approx. 1 qt. of dielectric fluid from a hole in the side of the unit. The fluid mixed with rainwater underneath on the asphalt roadway beneath the transformer and ran down the hill in the form of a sheen for approx. 300' to the intersection of Hylan Blvd. There is a sewer catch basin at the corner of Hylan Blvd. and Pouch Terr. Mr. Gerdes and Supervisor R. Moloughney, who also responded to this site, are unable to say whether or not any oil got into the sewer. There is no smoke or fire condition. No private property is involved. Mr. Gerdes cut clear the transformer and bagged it to stop the leak. Mr. Moloughney is containing the spill around the catch basin with diapers and bumpers. CDOH assistance has been requested. E.H. & S. was notified and is enroute to site. CIG notified at 1129 hrs. We have a Jaco report dated 5/12/92 indicating that there is 15 ppm pcb content. We cannot use this report and spill will be treated as 50-499 ppm pcb..... T. Bergendale # 23178. 02/04/03 ... 1415 hrs. Ann Ip reported cleanup contractor Ken Marine had arrived on site and started cleanup operations. They will have to clean an area approx. 1' x 800' at the curbline down Pouch Terrace and onto Hylan Blvd. to the corner of Fingerboard Rd. Also, EPA provisional # NYP-004-106902 was obtained from the ERT at the request of Ann Ip....T. Bergendale # 23178. 2/4/03 ....2030 hrs Received Chem lab results. Results show 4 PPM PCB notified CDOH foreman Quinonez 2/4/03....2340 hrs ...F Quinonez reports cleanup complete. F/O 38 Pouch 8 foot by 30 foot area. Area on road 5 foot by 20 foot. Across from 38 Pouch 5 foot by 20 foot area ...a 3 foot by 1300 foot area along curb from 38 Pouch to Roderick to Hylan Blvd. to Fingerboard Rd. All area's double washed with citrus cleaner then double rinsed with water. Also catch basin at 4607 Hylan Blvd. cleaned. 10 55 gal drums of oily waste removed by oil contractor 2/5/03 1050 hrs.....This report is updated to provide the following additional information: 1) The roof of a customer's vehicle (1992 Ford Explorer, license plate G186PH) parked directly underneath the leaked transfomer was also affected by this spill. As a result, the entire roof was double washed and rinsed with a mild degreaser and water. The vehicle owner was then provided with a car wash voucher and was directed to a car wash. 2) Prior to beginning the double washing and rinsing operation, all the debris on the affected area was sweeped and placed into 55-gallon drums. The affected areas were then double pressure washed and rinsed with an

FRONT OF (Continued) **S106011239**

oil degreaser (oil eater) and water. The following lists the sizes of the areas affected and the sizes of the areas cleaned: - 6'x20' asphalt roadway in front of 38 Pouch Terrace was affected. Approx. 8'x30' of the roadway was cleaned. Sections of the concrete sidewalk (~1' wide x30' long) were also cleaned as a precaution. - 3'x6' asphalt roadway (in the mid section of the roadway) in front of 38 Pouch Terrace was affected. Approx. 5'x20' roadway was cleaned. - 3'x15' asphalt roadway on the opposite side of 38 Pouch Terrace was affected. Approx. 5'x20' roadway was cleaned. - ~1' wide and ~1300' long roadway along the curb from Pouch Terrace to Roderick Ave., to Hylan Blvd. was affected. Approx. 3' wide by 800' long roadway was double pressure washed and rinsed with an oil degreaser and water. Upon receiving the PCB result of the oil sample taken from the transformer (i.e., 4 ppm), contractor Ken's Marine Services was instructed to clean the remaining 500' long section of the roadway by single washing and rinsing with oil eater and water. - A catch basin located on Hylan Blvd, adjacent to Fingerboard Road was affected. As a result of the cleanup, all the oily sediment was removed from the catch basin. The basin was pressure washed and rinsed with oil eater and water. 3) As a result of the cleanup performed by Ken's Marine Service, a total of 10 drums of non-hazardous oily debris and 550 gallons of non-hazardous oily liquid waste were generated. These wastes were shipped separately to Cycle Chem located at Elizabeth, NJ for disposal. There is no need to utilize the EPA provision number since waste is non-hazardous. 4) ERT (Dan Pontecorvo) visited the site on 2/4/03 at approx. 1545 hrs. SIEHS (Ann Ip) toured the site with him and discussed the cleanup plan with him and Ken's Marine Service. All three of them mutually agreed on the cleanup plan. Dan left the site at approx. 1620 hrs. 5) The time CIG was notified was not entered in the section of First Reported to CIG . Re-entered date and time in this section. 6) The lab sequence # of the PCB lab result (4 ppm) received on 2/4/03 is 03-01021-001.....A.Ip (71684) UPDATE 2/5/03 1405 Hrs. Finder was F. Gerdes, employee #25706, Troubleshooter, Control Operations. As per Construction transformer was replaced on 2/4/03 UPDATE 3/11/03 1316 hrs.....As per supervisor Fred Quinonez, the primary tap fell and made contact on side of the transformer, burned a hole on the side and cause the spill. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 12/5/03 TJD Initial response to event was two-fold. Krimgold responded to Activities NY (USCG) and was transported via boat to vessel that caused spill. Demeo & Sawyer were assigned to survey Coney Island shoreline in area of Norton Point. At Norton Point heavy oil impacts were identified at high water line. Impacts include tar patties and tar balls along high water rack line. In addition there is substanial oil impacting the rock jetties in this area. Impacts were found between 44th and 51st Streets. Miller Environmental was retained by RP for cleanup. Crews are maintaining absorbents, picking tar balls off beach and using a hotsie to power wash rocks. 12/8/03 TJD Spill reassigned to Sawyer as per direction of Nagi/Austin/Kunkel 3/5/04 - Sawyer - Did shoreline inspection with Steve Kemelman and Randall Austin in December and determined that the rip-rap along the most impacted area of the SeaGate community shoreline had been properly cleaned up. Closed."
Remarks: "vessel named brussel equipment while transforing to tanks it went into waterway."

DEC Memo: "03/30/09 - See eDocs for Con Ed report detailing cleanup and closure. 2/26/09 - Raphael Ketani. I called up the Con Ed ERT desk. The person at the desk said that the pint leak simply fell onto the sidewalk. No one was contaminated and no property. Movement on the sidewalk is not impeded. Con Ed is waiting for the power to be turned off before they bag the transformer. Because it is a minor spill, this case has been assigned to Amar Nagi."
Remarks: "Caller states a transformer failure caused one pint of oil to spill to concrete. Cleanup is ongoing."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ e2MIS NOTES 144287 07/31/02 ... 1715 hrs. Troubleshooter discovered a dielectric fluid spill from 33kv aerial cable joint on feeder 33R13 between poles 10851 and 8693 on Fingerboard Rd. and Tompkins Ave. Approx. 8 oz. of dielectric fluid leaked onto the sidewalk and curb area beneath the joint and a vehicle. Spill was confined on sidewalk and curb. An area of sidewalk and curb approx. 8' x 3' is impacted. Mr. Colon will treat the spill as 50-499 ppm PCB's. He will attempt to determine if he can bag the leaking joint until the feeder can be scheduled out for permanent repairs to the joint. 7/31/02 @ 1915 hrs, R. Remauro reports that cleanup is still in progress, The vehicle mentioned above was parked under the leaking cable. It is NOT a joint, it is a capped end of aerial cable. 7/31/02 @ 1915 hrs, D. Colon reports cleanup complete. The vehicle and the affected sidewalk & curb were double washed and rinsed with Rip-Tide and water. The size of the sidewalk & curb cleaned was 10' x 5'. The end of the aerial cable is temporarily bagged. Permanent repair pending outage of cable. UPDATE 8/7/02 1100 Hrs. As per J. Minucci this cable is dead and an outage is not required. 9/11/02....1135

ROADWAY (Continued) **S106006153**

hrs. R. Mazza # 26963 reports cable ends at this location leaked approx. 2 oz. oil. An area of concrete 5 foot by 5 foot affected. Spill was confined on sidewalk. Cable ends re-bagged and 6 foot by 6 foot area of concrete cleaned using speedy dry and double citrus washed. UPDATE 9/12/02 This report will stay open until cable is removed. Update .... 6/14/04 .... at 1838 hrs responding to SE04006392 T/S R.Wallner reports that an abandoned section of aerial cable between 136 and 138 Fingerboard Rd has leaked approximately 100 drops (8 oz) of dielectric fluid onto the sidewalk. The oil is spread over an aera 2ft wide and 7' long on the cement. No sewers or waterways were affected, there is no active smoke or fire and no private property was affected. The crew responding is treating the oil as 50 - 499 ppm pcbs. Upon arrival the t/s barricaded the area and spread speedi-dri to absorb the oil. At 2020 hrs the clean up was complete. The crew double washed and rinsed an area approximately 4'x9' with citrus cleaner and water. The absorbed the liquid residue with speedi-dri and generated 1 plastic bag of waste. They also installed additional absorbant pads and plastic bags on the aerial cable. The bag will be labled as hazardous waste and will be taken to the VBSC for disposal as such. The stop time on the report was changed to reflect this latest cleanup at the location.....GG 27365. UPDATE 3/22/05 0750 Hrs. As per Construction Overhead (V. Minucci, Foreman) cable was removed on 3/21/05 and disposed of at VBSC."

Remarks: "APPROX 8 OUNCES OF DIELECTRIC FLUID LEAKED FROM A FEEDER ON TO PAVEMENT. CLEANUP TO BE TREATED AS 50 TO 499 PPM. CON ED #144287 "

DEC Memo:	"e2mis 152905 4/13/04 @ 2025 Hrs. J.Lindstrom reports 1 75 KV Transformer on pole 25756 in front of 649 Fingerboard Rd. leaking from main body of transformer. An area of 15 ft. by 20 ft. on grass and street was affected. There were also 2 sanitary sewer catch basins affected. The transformer was a Porter Delta Serial # 620418. Jaco sample on transformer show non-detectable PCB. Sample # SI 200693. Transformer will be treated as 50 - 499 PCB until sample is taken. Dan Pontecorvo E.R.T. reports oily sheen on sewer grating 150 east of transformer. Car under pole covered with oil- Honda Element Ohio Plate # EA 14DS. Dan Pontecorvo taking oil sample to Astoria Chem. Lab. Lab Report from Chem Lab Sequence # 04-2819-00 < 1.0 PPM 3 1/2 ft. by 15 ft. grass in tree lane removed. Roadway in front of Transformer. 20 Ft. by 15 ft. wide was double washed with safety wash and water. Catch Basin 145 ft. east of transformer was cleaned out by vactor and double washed with safety wash and water. Also area across the street 1 ft. wide and 30 ft. long was double washed with safety wash and rinsed. Blacktop in front of transformer 16 ft. by 25 ft. was double washed and rinsed. Pole # 25756 was also washed down with safety wash and rinsed. Above vehicle was also washed and note was left for owner to contact control center for further cleaning. The damaged transformer was removed and replaced in the early morning of 4/14/04. The entire cleanup completed at 0440 hrs on 4/14/04."
Remarks:	"CLEANUP IN PROGRESS. FAULTY TRANSFORMER. AN UNKNOWN AMOUNT (ABOUT 15 GALLONS) WENT INTO THE SEWER. REF NUMBER "

DEC Memo:	"E2MIS 148990 1050 hrs. Field Supervisor J Raggi reports aerial cable leaked approxiamately 16 ounces of dielectric fluid leaked to grass in curb lane affecting an area of 18 inches by 10 foot grass and soil. Also affected was an area of 2 foot by 10 foot on sidewalk. Private vehicle 1995 GMC Jimmy plate AEC - 8239 has oil on roof and side. No sewers or waterways affected. No smoke or fire present. Underground to clean spill. Troubleshooter to bag joint. Spill will be treated as 50 -499 PCB containing.....Rl 26233..... 6/30/03 1135 hrs Raggi notified by owner of house at 88 Ocean Ave that the front steps and front porch have drops on them. Vehicle to be double wash and double rinsed before the owner takes it to car wash. 6/30/03 1140 hrs. DEC Abraham was notified of impact to private property as per Ann Ip EH&S 6/30/03 1148 hrs. Raggi reports an additional vehicle affected. 1994 Mercury Tracer Gray station wagon plate CAU-8054 NY .Oil spots on back window and rear tail gate. CIG notified of additional vehicle 6/30/03 1710 hrs R Moloughney # 98618 Field foreman reports Mr. Biago Brignina reports his son 's vehicle was parked under cable while visiting . Vehicle 1989 Chrysler convertable no license available son lives upstate .Phone number 347-526-9645 Claims roof was stained.....CIG notified Kens marine service on site to do clean-up EPA provisional number NYP 004112561....RL 26233... 6/30/03 1900 hrs UPDATE: A sample (oil on wipe) was taken and it was sent to the Chem Lab for PCB analysis at 1500 hrs. Cleanup contractor Ken's Marine Service arrived the site at approx. 1645 hrs. SIEHS (A.Ip & K.Toomey) discussed the cleanup plan with Ken's Marine. Ken's Marine began the cleanup at approx. 1530 hrs. All the affected solid surface (i.e., concrete sidewalk, concrete front yard, asphalt roadway, cement stariways, and the wooden porch) were first hand scrubbed with seawash and then followed by double pressure washed with seawash and water. The affected wood rail, metal rail, metal fence, stucco surface, and two plastic trash cans and the cans' covers were double pressure washed with seawash and water. The affected grass area was removed and the affected shrub located at the corner of the house was trimmed on both the top and the sides. The two customer vehicles (GMC Jimmy and Mercury Tracer) werealso triple pressure washed with seawash and water. The following lists the size of the affected areas and the size of areas cleaned:1) 4'x40' concrete sidewalk affected, 4'x42' area cleaned 2) 1'x40' grass area between sidewalk and roadway affected, 1'x42'x2 soil/grass removed 3) 4'x16' conrete front yard affected, 4'x18' area cleaned 4) 4'x30' wooded front porch with painted surface affected, 4'x30' area

88 OCEAN AVENUE (Continued) **S106015593**

cleaned 5) 5'x30' stucco surface affected, 5'x30' area cleaned 6) 12'x40' asphalt roadway affected, 13'x42' area cleaned The entire cleanup was completed at approx. 1745 hrs. A total of two fully stuffed 55-gallons drums (270 kg) were generated and they were transported by Ken's Marine to Cycle Chem (Elizabeth, NJ) for disposal as PCB solid waste (manifest # NJA4135973). Customer resides at 88 Ocean Ave (Lina DiGioia 718-815-9307) expressed concern about the result of the PCB anaysis and requested that the Company to verbally inform her of the result when it becomes available. Ms. DiGioria also expressed concern about some of the stains that are still visible after completion of the cleanup (most stains have been removed or lightened). She was informed to contact the UG Planner to followup on this issue. The leaked cable was temporarily wrapped with absorbent pads and plasitc. Currently pending outage for permanent repair of the cable. Post cleanup photos were taken by the Company photographer at approx. 1830 hrs UPDATE 7/1/03 1513 Hrs. The finder was J. Raggi, employee #15861, Field Supervisor, Control Operations and the pole number is 6324. Lab report 03-05389- 001 dated 7/1/03 indicates <1 PPM PCB... G. Triolo, #01868. 7/5/03 @ 2045 hrs, SSO Vito Aglio reports that the the cable leaked again. 1/2 ounce of oil leaked several spots covering an area of 20' x 4' ifo 88 Ocean Ave. TS dispatched to location to perform cleanup and re wrap cable. Vincent Reneo, EGS 81202 7/5/03 @ 2150 hrs, SSO V. Aglio reports that TS Lars Bleivik verified that the plastic wrap over the cable is dry and that there is no evidence of oil leaking from cable. Another bag was installed over the existing one anyway. The visible drops on the concrete were from the previous cleanup. No cleanup required. Vincent Reneo, EGS 81202 7/10/03 1455 hrs..... Update: On 7/1/03, UG Planner Joe D'Aquila visited customer resided at 88 Ocean Ave. Information regarding the PCB result (i.e., <1 ppm) of sample taken on 6/30/03 was provided to the customer. The mint plants (located close to the spill area but not affected by the spill based on visual inspection) was also removed by Joe D'Aquila as a precaution. In addition, the metal fence and metal rails were cleaned again with Knuckle Cleaner to lighten the stains that were still visible after the cleanup performed on 6/30/03.....A.Ip (71684) 8/28/03 0920 hrs.....Update J . Raggi emp# 15861 reports bagged aerial cable leaked approxiamately 6 ounces dielectric fluid. Areas affected 4 feet by 28 feet of sidewalk, 1 foot by 28 feet tree lane and 1 foot by 28 feet asphalt street. No smoke or fire present. No sewers or waterways affected. CDUG on site to do cleanup. Oil samlpe # 146457 from Jun. 30 -2003 shows < 1 PPM PCB. Areial joint was rebagged by troubleshooter. CIG DiDonato #01669 notified @ 0946 hrs.====RL 26233========== 8/28/03 1205 hrs. Update G Conroy # 38488 CDUG foreman reports spill clean. Spill cleaned 4 feet by 30 feet on sidewalk and 1 foot by 30 feet on street by double washing with citrus then double rinsing with water. The tree lane 1 foot by 30 feet soil and grass removed. 2 large bags of debris removed to be disposed at the VBSC. 33 KV feeder 33R13 must be taken out of service to make permanent repairs . Due to heat contingency UPDATE 1/23/04 1020 Hrs. The tree lane 1'x30'x3 of soil and grass was removed. As per Construction aerial cable was repaired on 1/22/04 by replacing a section of aerial cable and making new joint "

Remarks: "LEAK FROM OVERHEAD CABLE JOINT LEAK ON TO PRIVATE PROPERTY AND PRIVATE CAR NY REG AEC8239 THEY WILL CLEAN UP PENDING 50-499 PPM "

FORT WADSWORTH - BATTERY WEED **NY SHWS** **S106905137**
NAVAL STATION - NEW YORK **N/A**
STATEN ISLAND, NY 10305

SHWS:
Program: HW
Site Code: 58302
Classification: C
Region: 2
Acres: 1.5
HW Code: 243015
Record Add: 11/18/1999
Record Upd: 01/11/2008
Updated By: JAAVERSA
Site Description: This site is located in a commercial/residential area of Staten Island. The site Topography slopes east. The nearest Water body is adjacent to the site (Lower New York Bay).Fort Wadsworth was first occupied by the US Army in 1794. The first structures (artillery batteries) were built over 24 acres of the site in order to defend New York City during the War of 1812, including Fort Richmond (now called Battery Weed). On October 1, 1987, Fort Wadsworth was transferred to the US Navy. Since the building functions and generated waste disposal activities were not well documented by the Army, the Navy decided to investigate the base to determine hazardous waste contents and impacts to the environment. A 1990 study identified four potential areas of concern: Moat Transformer Area, Incinerator Ash Disposal Area, Pesticide Shop Area, and Battery Weed

FORT WADSWORTH - BATTERY WEED (Continued) **S106905137**

	Courtyard Area. A Site Inspection (SI) completed in 1992 identified the contaminants of concern as lead, PCBs, pesticides and semi-volatile organic compounds (SVOCs). However, an extended SI completed in the fall of 1994 indicated that the only area containing hazardous waste was the Battery Weed Courtyard Area. On-site soils contained hazardous levels of PCBs (above 50 ppm). In the Fall of 1995, a removal action was undertaken at the site which brought levels of PCBs in the soil below cleanup objectives. Fort Wadsworth, which was decommissioned on August 31, 1994, is currently occupied by the National Park Service.
Env Problem:	Past unknown site operations had caused on-site soils to become contaminated with PCBs. This contamination did not exist outside of the courtyard area. It is unknown whether this contamination had impacted groundwater or the adjacent surface water body. However, in light of the removal action, and the location of the groundwater, it seems highly unlikely. No additional remedial action is planned. The site is no longer considered a significant environmental threat.
Health Problem:	The potential for exposure to PCB-contaminated soils in the courtyard has been eliminated with the removal of these soils as part of a base-wide cleanup conducted in the Fall of 1995. The base is currently occupied by the National Park Service and is open to the public. The site is served by public water, therefore, no exposure to on-site groundwater is expected.

DEC Memo:	"8/11/2006 - Ryan Piper visited the site on his way to another site on Staten Island. Site is residential lot with a half buried ~250 gal oil tank in the rear of the yard. Over time the oil in the tank has leaked out and contaminated the soil. According to the neighbor, the owner of the lot may have died. Neighbor believes the site is now up for sale. NYC Tax records AND Property Shark both show owner as: Mr. & Mrs Artman 51 High St Staten Island, NY 10305 Need to send a CSL (add a statement that the old oil tank must be removed when the contaminated soil is removed. A CSL was semding 08/15/06 to Mr. Mrs Artman at: 51 High St Staten Island, NY 10305 10/03/06-Hiralkumar Patel. visited site on 10/02/06. house was empty. spoke with Mr. Vinny (347-582-3920), neighbour of subject site. he never smelled any oil. dialed broker of house and got phone number for owner's daughter Ms. Joan. spoke with Ms. Joan (732-546-1305). as per her house has

VACANT LOT (Continued) **S108129893**

gas heating system and she doesn't know whether there was any tank in past. found 275 gal tank paritally buried in backyard of property. no evidence of leaking from top. not sure about any leak from bottom of tank and nobody knows how long this tank at location. asked Ms. Joan to hire contractor to dispose this tank properly. she will call back with contractor's information. Joan Doyle 21 Vanbrunt Place Middletown, NJ 07748 Fax: (732) 706-5531 10/11/06-Hiralkumar Patel. left message for Ms. Doyle. 10/12/06-Hiralkumar Patel. received call from Ms. Doyle. she has hired company to remove tanks from site. as per Ms. Doyle, there is one more tank inside the building. company will remove both tanks. explained to Ms. Doyle that the Department may need soil samples after tanks removal depends on site observations. asked Ms. Doyle to give company's name and number who will going to remove these tanks. she will fax document with consultant's name & number. received fax from Ms. Doyle. she has hired Evertight Tank Lining Co. (718-981-1818). 10/31/06-Hiralkumar Patel. left message for Ms. Doyle. 11/07/06-Hiralkumar Patel. spoke at Evertight Tank. they are not working at subject site. left message for Ms. Doyle. CSL sent out to Ms. Doyle via certified mail. letter faxed to Ms. Doyle. 11/16/06-Hiralkumar Patel. received certified mail receipt. 12/06/06-Hiralkumar Patel. received message from Ms. Doyle (Home: 732-495-0182, Cell: 732-546-1305). she hired PTC for tank removal. PTC removed tank on 12/04/06 from backyard. as per Anthony from PTC, there was no oil in tank and area around it was clean. as per Ms. Doyle, Anthony has took some pics. left message for Ms. Doyle left message for Anthony. received call from Anthony Lara. he found tank empty and clean. took PID around tank and found clean soil. based on available information, case closed."

Remarks: "250 GAL TANK THAT IS LEAKING. NEEDS TO BE PICKED UP."

random spots Double washed and rinsed. owners want cars compounded to remove stains. Fence and sidewalk double washed and rinsed but still stained. Area needs to bve power washed to remove stain. 1 bag of debris taken to VBSC for disposal as Hazardous Waste (50 - 499 ppm PCB) cleanup crew consisted of D.Olsen Emp # 07709, T. Clinton Emp # 48059. Crews dispatched to perform cleanup. 09/20/03 ... 1257 hrs. CIG notified. (Larry Costa) UPDATE 9/22/03 1000 Hrs. This report is being updated to provide the following information: 1) the finder was A. Cubas, employee #27308, Manager, Control Operations, 2) the cleanup crew was D. Olsen, employee #07709 and V. Aglio, employee #48370, 3) the sidewalk area affected was 13'x3' (not 30'x5' as originally reported) and the area double washed with citru clean and double rinsed with water was 15'x4', 4) no grass was affected as indicated above but a rock located on the grass had polyethylene compound on it which was removed by the cleanup crew and a 1 1/2'x1'x6 of grass and dirt where the rock was located was removed, 5) a 6 x2' curb area was also double washed with citru clean and double rinsed with water, 6) the fence area affected was 4'x8' and the area double washed with citru clean and double rinsed with water was 4'x10', 7) the four vehicles were double washed with citru clean and double rinsed with water, 8) this cable is 4KV and does not contain oil, the pothead is the only electrical equipment at this location and contains an insulating material which is a polyethylene compound (this compound does not contain PCBs), 9) the correct pole number is T-185, not T-85, 10) as per Construction Overhead the potheads were not removed, and 11) all waste was disposed of at VBSC as hazardous waste.....G. Triolo, #01868. 09/22/03 @ 0945 hrs A. Ip Emp# 71684 of EH&S reports pothead on pole T-185 leaking insulating material (polyethylene compound) on concrete curb in front of 1532 Bay St. 10 to 12 drops on 10 to 12 feet of curb No fire, smoke, sewers, waterways, or wetlands affected. F. Sardone on location to investigate problem. V. Minucci Emp# 16989 reports that actual cleanup size of curb is 10 feet long and 4 inches wide . Repair to pothead can be made now as per V. Minucci 09/22/03 @ 12 30 V. Minucci reports permanent repair to pothead made cleaned 10 ft X 4 inches speedy and citrus cleaner UPDATE 9/22/03 1235 Hrs. As per V. Minucci 1 bag of non-hazardous waste was disposed of at VBSC and the connections to the pothead were tightened which was causing the leak....G. Triolo, #01868."

Remarks: "POLE T-85. LEAK FROM POTHEAD. 1 QUART SPILLED ONTO CONCRETE, GRASS AND PRIVATE PROPERTY. NO PCB INFORMATION. POTHEAD BEING REPAIRED. BEING CLEANED UP. CON EDISON REFERENCE NUMBER 150426."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 152276: in front of 1532 Bay St an A phase 4kv pothead on pole T-185 is leaking insulating compound. Approximately 50 drops of the compound are spread over an area 8' x 8' on concrete, asphalt, a private vehicle and possibly the grass area between the sidewalk and curb. The troubleman has barricaded the area and is awaiting a supervisor from construction with a crew to make repairs. The material leaking from the pothead is G&W 254 Insulating compound and according to the MSDS it is a polyethylene compound and is non-hazardous. V.Minucci CDOH reports that the vehicle that was impacted by the compound was cleaned using polywaterwater type HP cleaner/degreaser and soft rags. THe vehicle was double washed and rinsed and the customer is satisfied with the cleanup. His crew then proceeded to clean an area approximately 15' x 6' of concrete and

POLE #185 TRANSFORMER (Continued) **S106383218**

asphalt by double washing and rinsing it using citrus cleaner and speedi-dri to absorb the liquid. They also removed an area of grass approximately 2 sq ft that has shown signs of the compound on it. All debris was placed in a doubled plastic bag and taken to the VBSC for disposal as non hazardous waste. The overhead crew also wiped down the pothead with the citrus cleaner and installed a plastic sleeve around the bottom. The debris from this portion of the clean up was also placed in the bag for disposal at the VBSC. The cleanup was completed at 1635 hr. As per V. Minucci the grass that was removed was 2 sq. ft. by 2 deep, the concrete area (sidewalk) was 15'x4', the curb area was 15'x and the asphalt area (street) was 15'x1' and the areas were double washed with citru clean and double rinsed with water. This report will be closed when the pothead has been replaced. As per Construction Overhead the pothead was replaced on 4/7/04."

Remarks: "g&W 254 Insulating compound(dielectric fluid) 50 drops were spilled. The transformer failed it probably got too hot and the goo insulation dripped out. Area has been baracaded and they are waiting for a crew to clean it up. This site has been listed as no hazardous. Effecting land only."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 5/6/04: Sent e-mail to Permits and to Marine Resources to make them aware of potential wetlands issues. (JHO) ~~~~~~~~~~~~~~~~ e2mis no. 153229: SIEH&S reported to the control center that 15' s/o tower M-11 on the RRROW 300' s/o South Ave 20' e/o the most easterly track in a wetlands adjacent area an insulating medium has leaked from an aerial joint into the soil. The affected area of soil is approximately 3'x4' and there is a residue of gooey material on the joint and messenger cable. The actual substance is unknown and the responding crews with treat the substance as 50-499 ppm PCBs. amount of liquid that leaked from the joint is estimated to be approximately 8 ounces. As per the Andrea Schmitz it should be noted that this location is in a permitted area. 5/6/04 AT 1600 hrs K.Toomey reports that the cleanup has been completed. Crews removed an area of soil 7'x7'x4 . The joint, associated cable and messenger, a length of approximately 5' was double washed and rinsed with citra clean and the joint was then diapered and wrapped with plastic until permanent repairs can be made. A total of three 55 gallon drums of waste were generated and will be transported to the VBSC under the one trip rule and will be placed in the hazardous waste holding area until sample results are received from the chem lab.. Crews also used dead native plants from the sight as mulch and put them into the excavation to prevent erosion.....GG 27365 UPDATE 5/11/04 0720 Hrs. The finder was K. Toomey, employee #84048, Sr. Specialist, Staten Island EH&S. No private property was affected. The correct First Reported time is 11:30 (not 11:33 as indicated above in the Detail Description). Lab #04-03488-001 dated 5/6/04 indicates <1 ppm PCB. The 3 drums of waste was taken to VBSC and disposed of as non-hazardous waste. This report will be closed when aerial joint has been permanently repaired....G. Triolo, #01868. UPDATE 1/13/05 0645 Hrs. As per Construction Overhead the aerial cable was permanently replaced on 7/16/04. Report submitted for DEC closure approval....G. Triolo, #01868"
Remarks:	"the spill hapened at south ave on railroad right of way,next to tower m11.about 8 ounces of cable oil spilled. leaked onto soil.spill hasnt been cleaned up yet. treat it as PCB "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 153250: Control Ops field supervisor reports that in front of 24 Fingerboard Rd approximately 30' w/o of pole 35113 oil is leaking from an aerial joint on a abandoned section of aerial cable. He estimates that approximately 1 pint of oil has leaked onto an area 15'x15' of concrete and asphalt and also onto a 1989 Ford Tauraus. The crew on site is treating the oil as 50-499 ppm pcbs for the cleanup. A sample has been taken and will sent to the chem lab for analysis. The joint will be diapered and bagged and CDOH will be notified to remove the section. 5/7/2004 R.Moloughney reports that at 17:55 Hrs. cleanup was complete. He reports that an area of 15 ft. by 15 ft was affected and that he cleaned an area of 20 ft. by 20 ft. He double washed the area with orange wash and double rinsed with water He generated 3 bags of waste being treated as 50-449 ppm pcb including diapers and speedy dry and brought the waste to Victory Blvd. service center. The courier was called at 17:30 to pick up sample of oil from the cable to be brought to Astoria for test. The vehicle was also double washed with orange wash and double rinsed with water. A waste tracking form was filled out and the waste was put in a 55 gallon drum for PCB waste in Victory Blvd. Pending results from the Astoria Lab 5/8/04 Results of Analysis Lab Sequence 04-03510-001. Chain of custody # AA07246. Less than 1.0 ppm. UPDATE 5/10/04 1105 Hrs. The finder R. Moloughney, employee #98618, Operating Supervisor, Control Operations. The name of the cleaner was Citri Clean (not orange wash as indicated above). The 3 bags of waste was disposed of as hazardous waste. The joint was bagged and this report will be closed when aerial cable has been removed.....G. Triolo, #01868. UPDATE 3/22/05 0800 Hrs. As per Construction Overhead (V. Minucci, Foreman) all cable was removed on 3/21/05 and disposed of at VBSC. This report is being submitted to the DEC for approval...G. Triolo, #01868."
Remarks:	"One Pint of material spilled on land when airial cable experienced a small leak. Clean up is in progress."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 131330: approximately 50 drops of oil on the sidewalk/parking pad and 100 drops of oil in the street from a leaking aerial joint on feeder 33R13 at pole 10947. He estimates that the approximate amout of liquid lost from the cable is 2 ounces. None of the oil has entered any sewers or waterways. The spill is being treated as a 50-499 ppm PCB as a precaution. The troubleman on location reports that the source of the oil is an existing plastic bag over the cable and joint. 5/10/00 oil has been cleaned up using speedi-dri The affected areas have been double washed and rinsed using Citrus cleaner. The troubleman wrapped the affected joint/cable with diapers, plastic bags and tape to prevent any further leakage. As per Construction Underground joint/cable was repaired on 5/25/00."

Update By:	JEBROWN
Site Description:	Location: The Sun Chemical Corporation site is located at 441-443 Tompkins Avenue and 83 Chestnut Avenue in an urban portion of the Rosebank section of Staten Island, Richmond County, New York. Site Features: The site consists of 5.196 acres. The site comprises two tax lots in Tax Block 2846, including: Lot 12, the majority of the property and the land on which manufacturing operations have

SUN CHEMICAL CORPORATION (Continued) **S109059143**

occurred; and Lot 54, formerly a portion of a passenger and freight railroad. The site is fenced and is bordered on the south by privately owned real property, on the north by Chestnut Avenue, on the west by Tompkins Avenue, and on the east by privately owned real property. All structures were previously demolished and the site is vacant with the exception of an occupied security guard shack located on the western property boundary. Current Zoning and Land Use: Lot 12 is currently zoned M3-l (manufacturing) and Lot 54 is zoned R3A (residential). The site is currently owned by SUN/DIC Acquisitions, Corp. and is vacant. The surrounding parcels are currently used for residential use. A church and the former affiliated parochial school are located to the west and southwest. A museum and neighborhood playground are located across Tompkins Avenue to the west. Past Use of the Site: The site formerly consisted of a multi-story two-wing manufacturing building, support buildings (offices, warehouse laboratory, maintenance shop), exterior aboveground storage tanks and perimeter parking areas. All manufacturing buildings have been demolished.Prior to 1908 the site was used for residential, lodging, and entertainment purposes. In 1908, the site was developed for industrial operations, for the production of various pigments for use in ink, plastics, coatings and cosmetics preparations, and operated in that capacity without material changes until 2008. The Lot 12 portion of the site has historically been used by G. Siegle & Co. Color Works, a pigment production facility (1907-1928), the Ansbacher-Siegle Corp., manufacturers of dry colors (1937-1962), Ansbacher Siegle Division of Sun Chemical Corp. Colors (1965) and Sun Chemical Corp. Pigments Department (1970-1979). The Lot 54 portion of the site has historically been used as a Staten Island Metro Transit railroad station (1898-1962) and was acquired by Sun Chemical Corp. in June 1984. Sun Chemical Corporation conducted pigment production operations at the site between 1987 and 2008.Prior Investigations/Actions:Several investigations/evaluations were completed at the site prior to the 2010-2015 Remedial Investigation (RI) as follows: 1988 Site Investigation by Sun Chemical to determine the extent of contamination in connection with a 1988 release of a caustic solution; 1994 Hazardous Substances Disposal Site Study by the Department; 2001 Preliminary Site Assessment Work Plan by Sun Chemical for investigation of the location of 1988 release of a caustic solution, and floors under the filter presses in the main production building (note, the work plan was on hold for several years while Sun Chemical was in various stages of negotiations with the Department to enter a cleanup program); and June 2008 Pre-Demolition Sub-slab Soil Evaluation by Sun Chemical. Based on those investigations/evaluations an initial remedial action was implemented, prior to execution of the Brownfield Cleanup Agreement and without Department oversight, to address contaminated soils exposed and/or disturbed during removal of the buildings and subsequent regrading.Site Geology and Hydrogeology: Based on soil collected by continuous sampling activities, unconsolidated soils were encountered to the maximum drilling depth of 35 feet. These soils consisted of clayey silt and sand, with minor coarser layers. Soils encountered during preliminary investigations were of the same consistency, with occasional boulders present. A peat layer was also encountered in the southeastern portion of the site. The presence of a peat layer and the associated perched water (8 feet below ground surface [bgs]) appears to be localized given that these conditions were not evident at nearby monitoring wells, completed at the same

SUN CHEMICAL CORPORATION (Continued) **S109059143**

topographic elevation approximately 130 feet to the west-northwest.The groundwater level within the overburden aquifer ranges from an elevation of approximately 5 feet bgs at the east boundary of the site to an elevation of approximately 35 feet bgs in the central portion of the site. Groundwater flow direction varies from easterly to northerly, largely following site topography. As such, the highest groundwater elevations are along the southern property boundary, with a component of flow to the north, and a component of flow to the east. The regional groundwater flow direction is generally to the east toward the Upper New York Bay.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. The Remedial Investigation indicated that the primary contaminants of concern at the site include metals, polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs), and chlorinated volatile organic compounds (CVOCs). Previous environmental investigation on-site also revealed concentrations of metals, SVOCs, CVOCs and PCBs exceeding standards, criteria, and guidance values in the soil and groundwater.Soil: Based upon investigations to date, surface and sub-surface soils are contaminated with SVOCs (polyaromatic hydrocarbons [PAHs]), PCBs and some metals (e.g., arsenic, barium, cadmium, lead, and nickel) over restricted residential use soil cleanup objectives (RRSCOS) on Lot 12 and over residential use SCOs (RSCOs) on Lot 54 at varying depths. Lot 12: Maximum detections vs. applicable RRSCOs are as follows: arsenic at 559 parts per million (ppm) vs. 16 ppm, barium at 2,340 ppm vs. 400 ppm, cadmium at 53 ppm vs. 4.3 ppm, lead at 44,400 ppm vs. 400 ppm, PCBs at 49 ppm vs. 1 ppm, benzo(a)pyrene at 4.3 ppm vs. 1 ppm, benzo(k)anthracene at 4.3 ppm vs. 1 ppm and benzo(k)flouranthene at 4.8 ppm vs. 3.9 ppm.Lot 54: Maximum detections vs. applicable RSCOs are as follows: arsenic at 42 ppm vs. 16 ppm, barium 490 ppm vs. 350 ppm, lead 433 ppm vs. 400 ppm, nickel at 799 ppm vs. 140 ppm, PCBs at 2.1 ppm vs. 1 ppm, benzo(a)pyrene at 1.5 ppm vs. 1 ppm, benzo(k)anthracene at 1.5 ppm vs. 1 ppm and benzo(k)flouranthene at 1.6 ppm vs. 1 ppm.Data does not indicate any off-site impacts in soil related to this site.Groundwater: On Lot 12, groundwater sampling indicates one metal and CVOCs contamination above Class GA groundwater standards a localized area near MW-3 and MW-3D on-site. The groundwater samples were analyzed for metals, SVOCs, VOCs, PCBs and pesticides. Maximum groundwater detections vs. standards are as follows: trichloroethene at 16.7 parts per billion (ppb) vs. 5 ppb, 1,1,1-TCA at 7.35 ppb vs. 5 ppb, 1,1-dichloroethane at 314 ppb vs. 5 ppb, 1,1-dichloroethene at 576 ppb vs. 5 ppb, and nickel at 260 ppb vs. 100 ppb. On Lot 54, groundwater does not exceed standards. Data does not indicate off-site impacts in groundwater related to this site Soil Vapor: On Lot 12, elevated levels of tetrachloroethylene (PCE) were detected in soil vapor. Concentrations of PCE were detected in the southwestern portion of the site at the concentrations of 120 micrograms per cubic meter (ug/m3). The off-site soil vapor investigation was conducted at an adjacent property and it confirmed that PCE is not present in off-site soil vapor. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. On Lot 54, soil vapor results did not find any VOCs at levels of concern. Furthermore, environmental data does not indicate any off-site impacts in soil vapor related to this site.

SUN CHEMICAL CORPORATION (Continued) **S109059143**

Health Problem:	The site is fenced, which restricts public access. Groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains its water from a different source. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling has indicated that soil vapor intrusion is not a concern for off-site buildings.

Tank Info:

Tank Number: 1A
Tank Id: 46890
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
A01 - Tank Internal Protection - Epoxy Liner
B01 - Tank External Protection - Painted/Asphalt Coating
G01 - Tank Secondary Containment - Diking (Aboveground)
H00 - Tank Leak Detection - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 08/01/1993

Updated By:	REEVANS
Site Description:	The site is a 1/2 acre natural gas measuring and regulation station located in a residential neighborhood in northeast Staten Island, approx. one block from the Upper New York Bay. Past activities have resulted in a release of mercury onto site soils and there is a possibility of SVOC, PAH,and PCB contamination. The cause of the mercury release is thought to be breakage and maintenance of pressure measuring devices known as manometers. The site has been owned and operated by the volunteer as a natural gas metering facility for 49 years, and it is their intent to continue to operate it as such following remediation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/05/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/05/2016

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ST JOHN VILLA
57-61 CLEVELAND PLACE
STATEN ISLAND, NY 10305

TARGET PROPERTY COORDINATES

Latitude (North):	40.60164 - 40° 36' 5.90''
Longitude (West):	74.067845 - 74° 4' 4.24''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	578868.4
UTM Y (Meters):	4494743.0
Elevation:	137 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5939335 THE NARROWS, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

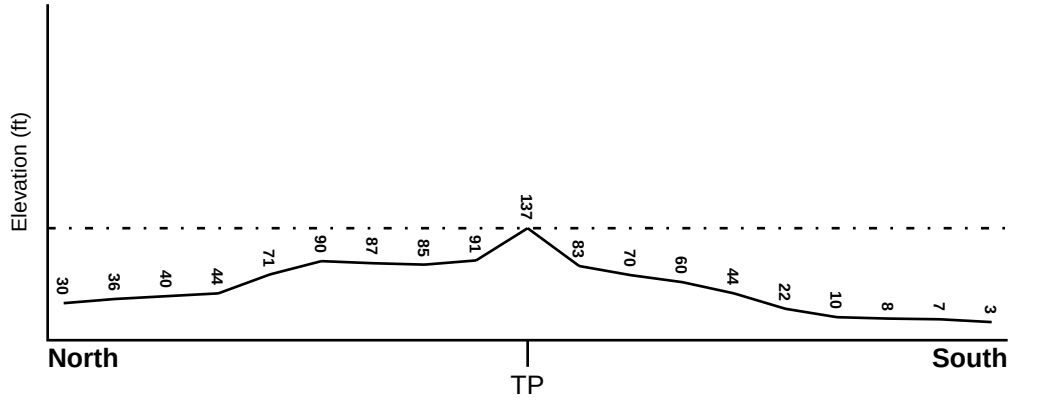
TOPOGRAPHIC INFORMATION

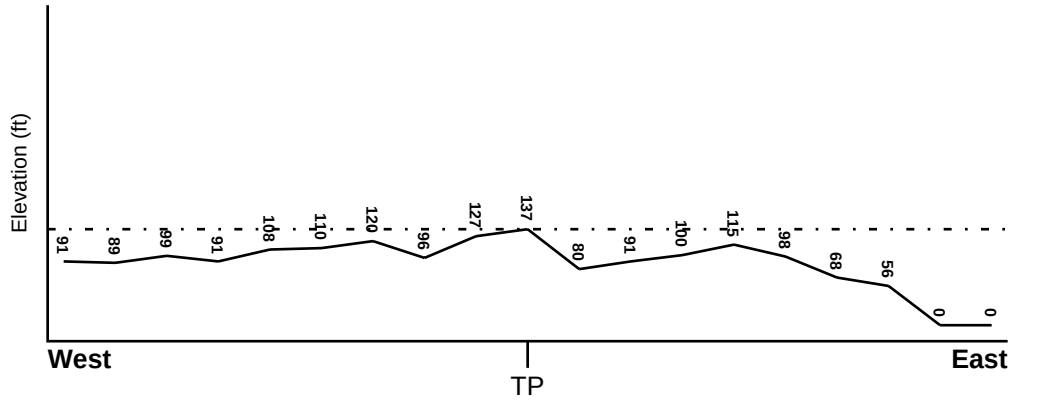
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 137 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970327F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970331F	FEMA FIRM Flood data
3604970329F	FEMA FIRM Flood data
3604970333F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
THE NARROWS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BERNARDSTON
Soil Surface Texture:	gravelly - silt loam
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	gravelly - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
2	6 inches	20 inches	channery - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.00 Min: 4.50
3	20 inches	65 inches	channery - silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 0.20 Min: 0.06	Max: 6.00 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: channery - silt loam
very stony - silt loam
silt loam
unweathered bedrock

Surficial Soil Types: channery - silt loam
very stony - silt loam
silt loam
unweathered bedrock

Shallow Soil Types: channery - fine sandy loam
very channery - silt loam

Deeper Soil Types: channery - loam
unweathered bedrock
loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of AKRF, Inc. on Apr 17, 2017.

TARGET PROPERTY

57-61 Cleveland Place
Staten Island, NY 10305

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

EDR Chain of Title

The EDR Chain of Title Report tracks a line of successive owners from the present back to 1940 of a particular parcel of property, linked together by recorded transactions which pass title. Available nationwide, this report provides a summary of a property's ownership history and is a valuable source for determining the prior uses of a property.

A network of professional abstractors following established procedures, uses client supplied address information to locate:

- Historical Chain of Title research
- Leases and Miscellaneous

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

(No. 45100 FEE $4.00) (No Stamps)

THIS INDENTURE, made the 27th day of July, nineteen hundred and thirty-eight, BETWEEN MARY BRUNETTA PAOLICELLI AND GIACENTA PAOLICELLI, residing at 35 Landis Avenue, Arrochar, Staten Island, N.Y., parties of the first part, and SISTERS OF ST. JOHN THE BAPTIST INC., (a domestic membership corporation) with an office and principal place of business at Cleveland Place, Arrochar, in the Borough and County of Richmond, City and State of New York, party of the second part; WITNESSETH, that the party of the first part, in consideration of TEN AND MORE ($10.00) dollars, lawful money of the United States, paid by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, its successors and assigns forever,

ALL the right, title and interest of the parties of the first part in and to that portion of Elma Avenue, formerly Glen Avenue, in the Borough of Richmond, County of Richmond, City of New York and State of New York, bounded and described as follows: NORTHWESTERLY by a line in continuation of the southeasterly side of Cleveland Place; southeasterly by a line parallel to

the northwesterly side of Knauth Place and intersecting the southwesterly side of Elma Avenue at a point distant seventy-five feet northwesterly from the corner formed by the intersection of the southwesterly side of Elma Avenue and the northwesterly side of Knauth Place; northeasterly by the northeasterly side of Elma Avenue, formerly Glen Avenue; and southwesterly by the southwesterly side of said Elma Avenue. IT being the intention of the parties of the first part to divest themselves of all right, title and interest in and to the bed of Elma Avenue as above described. The grantor, in compliance with Section 13 of the Lien Law, covenants that the grantor will receive the consideration for this conveyance as a trust fund to be applied first for the purpose of paying the cost of the improvement and that the grantor will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

TOGETHER with the appurtenances and all the estate and rights of the parties of the first part in and to said premises, TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, its successors and assigns forever.

IN WITNESS WHEREOF, the parties of the first part have hereunto set their hand_ and seal_ the day and year first above written.

IN PRESENCE OF: MARY B.PAOLICELLI (L.S.)

MICHAEL H.GRAE GIACINTA PAOLICELLI (L.S.)

State of New York, County of Richmond SS.: On the 27th day of July, nineteen hundred and thirty-eight, before me came MARY BRUNETTA PAOLICELLI and GIACINTA PAOLICELLI, to me known to be the individuals described in, and who executed, the foregoing instrument, and acknowledged that they executed the same. MICHAEL H.GRAE, Notary Public, Richmond County. - - - The land affected by the within instrument lies in Section 4 in Blocks 3085,3087,3088,3089, on the land map of the County of Richmond. Recorded July 28,1938 at 1.48 P.M. Vincent K. Drury, Clerk (For TITLE GUARANTEE TRUST COMPANY, BAY ST., ST. GEORGE, STATEN ISLAND)(ER)

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

MM

Borough Superintendent

CERTIFICATE WILL BE NULL AND VOID IF ALTERED IN ANY MANNER OR ADDITIONS ARE MADE THERETO.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing its height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners of any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent; and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the buildings or premises, upon payment of a fee of fifty cents per copy.

CERTIFICATE WILL BE NULL AND VOID IF ALTERED IN ANY MANNER OR ADDITIONS ARE MADE THERETO.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the egress or elevators of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extension on any side or by increasing in height shall be made; nor shall the building be moved from one lot or portion to another, nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certificated.

The superimposed, uniformly distributed loads, or concentrated loads or whatever the actual system of the construction in any story shall not exceed the live loads specified or assumed for the purpose of which such story is occupied, nor shall any such story be occupied by a greater number of persons of either sex or any more than that specified when any is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any such story may be put shall be restricted to that stated by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such licenses, permits or approvals as may be prescribed by law for the uses or purposes for which the building or any part thereof is occupied, nor from obtaining the special certificates required for the use and operation of elevators, nor from the installation of fire alarm systems where required by law, nor from complying with any lawful order issued by the fire commissioner relative to the fire and fire extinguishing appliances under the discretionary powers of the fire commissioner, nor from complying with any lawful order issued with the object of maintaining the building in a safe and lawful condition, nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building as is subject to all the provisions and conditions applying to a final or permanent certificate, it is not applicable to any building under the jurisdiction of the Housing Division, unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 15, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 15, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or construction to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance, or that there are no orders of violations or orders pending in the Department of Buildings at the time of issuance of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 644-F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammable or other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has inspected and tested and has certified his approval in writing of the installation of such containers, systems or equipments to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises upon payment of a fee of fifty cents per copy.

Color coordinates with the price ranges above.

G. Property Tax

G1. Property Tax

Market Value

The property tax assessment process starts when the city's assessors estimate a property's market value, based upon the available information. The assessors use three approaches to value the property: sales, cost and income. The *market value* is generally defined as what the property would sell for in a competitive and open market.

		2016/2017		2017/2018
Land market value		$1,180,000		$1,180,000
Building market value	+	$132,000	+	$171,000
Market value	**=**	**$1,312,000**	**=**	**$1,351,000**

Assessed Value

Assessed value is a calculation of the property value for tax purposes. It usually represents a percentage of the market value and is subject to limits on annual increases. Sometimes the city will exempt part of the assessed value from taxation, as an incentive to make improvements to an existing structure or to build on a vacant lot. There are also several tax reductions programs for residential properties that may apply and may lower the property's tax bill.

		2016/2017		2017/2018
Land assessed value		$531,000		$531,000
Building assessed value	+	$59,400	+	$76,950
Assessed value	=	$590,400	=	$607,950
Exemptions granted by city	-	$590,400	-	$607,950
Net assessed value	**=**	**$0**	**=**	**$0**

Transitional Value

While the city's assessors have noted the rapid appreciation of property in New York City, the state understands that it would be burdensome for property taxes to rise too fast. Therefore, increases in the *assessed value* are phased in over a number of years. This introduces the *transitional assessed value*, which is a limit on the portion of the assessed value introduced into the tax base. When the *assessed value* is phased in, sometimes the *exemptions* are as well.

		2016/2017		2017/2018
Transitional land value		$537,480		$534,240
Transitional building value	+	$27,090	+	$41,670
Transitional value	=	$564,570	=	$575,910
Transitional exemption value	-	$564,570	-	$575,910
Transitional net assessed value	**=**	**$0**	**=**	**$0**

Taxable Value

The *taxable value*, for 2016/2017, is the smaller of the city's *net assessed value* and the *transitional net assessed value*.

Taxable value	=	$0

Property Tax

Base tax is an estimate of what an owner **not** benefiting from tax exemptions or abatements would pay and is determined by multiplying the assessed value by the tax rate. *Current tax* is calculated by multiplying the taxable value by the tax rate.
For a very small number of properties, owner-related exemptions (for which we currently don't have information) apply, and so the values given below may be slightly different from the official ones. In addition to exemptions, the city also grants *tax abatements* to some properties. An *abatement* is simply a discount which is subtracted directly from the current tax. This results in the *property tax*, the amount the current owner pays.

Tax description	Billable value 16/17		Tax rate 16/17		Tax amount 16/17
Base tax	$564,570	*	10.5740%	=	$59,697.63
Exemption	$564,570			-	$59,697.63
Current tax	$0	*	10.5740%	=	$0.00
Total abatements				-	$0.00
Property tax				**=**	**$0.00**

Tax description	Billable value 17/18		Tax rate 17/18		Tax amount 17/18
Base tax	$575,910	*	10.5740%	=	$60,896.72
Exemption	$575,910			-	$60,896.72
Current tax	$0	*	10.5740%	=	$0.00
Total abatements				-	$0.00
Property tax				**=**	**$0.00**

For more information please visit New York City's property tax section. Also, you can view this property's assessment, tax bill and account statements here.

G2. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the J-51 Program and the 421a Program.

Exemption Values 16/17

Land exemption value	**$531,000**
Total exemption value	**$590,400**

Exemption Values 17/18

Land exemption value	**$531,000**
Total exemption value	**$607,950**

Transitional Exemptions 16/17

Transitional land exemption value	**$537,480**
Transitional total exemption value	**$564,570**

Transitional Exemptions 17/18

Transitional land exemption value	**$575,910**
Transitional total exemption value	**$575,910**

Code	Exemption description	Transitional exemption value	Changing exempt total
1021-01 (25110)	Nonprof Orgnztn-Religious	$556,776	$7,794

G3. Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishs the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may file forms providing corrections. After Finance verifies the complaints,

the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

Tentative Transitional Values

Tentative transitional land	**$534,240**
Tentative transitional total	**$575,910**
Tentative exempt land	**$534,240**
Tentative exempt total	**$575,910**

Tentative Actual Values

Tentative actual land	**$531,000**
Tentative actual total	**$607,950**
Tentative actual exempt land	**$531,000**
Tentative actual exempt total	**$607,950**

G5. Assessment History

Year	Building class	Market value	Assessed value	Taxable	Tax rate%	Base tax	Property tax
2016/17	Q2	$1,312,000	$590,400	$0	10.574%	$59,698	$0

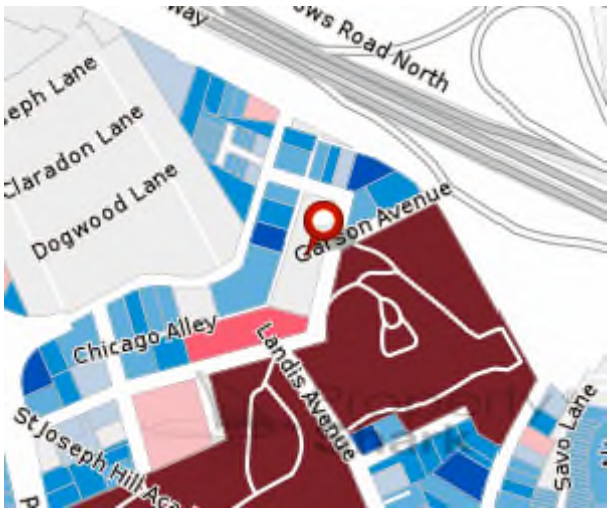
2005/06	Q2	$858,780	$386,451	$0	11.306%	$38,145	$0
2004/05	Q2	$760,000	$342,000	$0	11.558%	$35,940	$0
2003/04	Q2	$760,000	$342,000	$0	11.431%	$33,539	$0

G6. Tax per Square Foot



This map shows property tax in correlation with square footage of the property.

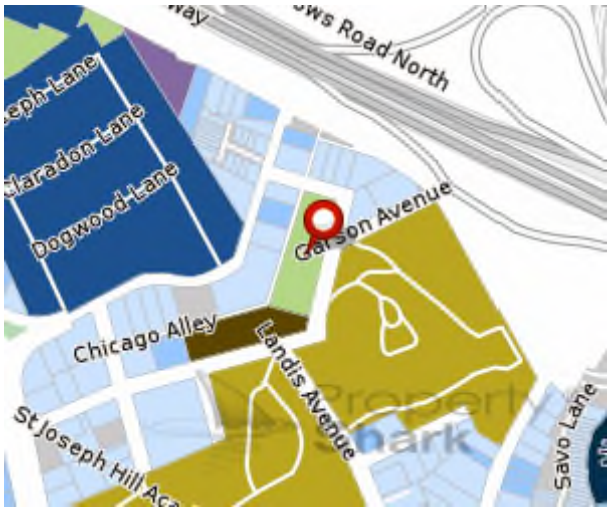
Above $10.00	$4.00 - $5.00
$9.00 - $10.00	$3.00 - $4.00
$8.00 - $9.00	$2.00 - $3.00
$7.00 - $8.00	$1.00 - $2.00
$6.00 - $7.00	Below $1.00
$5.00 - $6.00	No Data

H. Development & Use

H1. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found here.



Building class: **Playground (Q2)**

H2. Zoning

New York City is divided into three basic *zoning districts:* residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

Zoning Designation

Residential **R1-2**

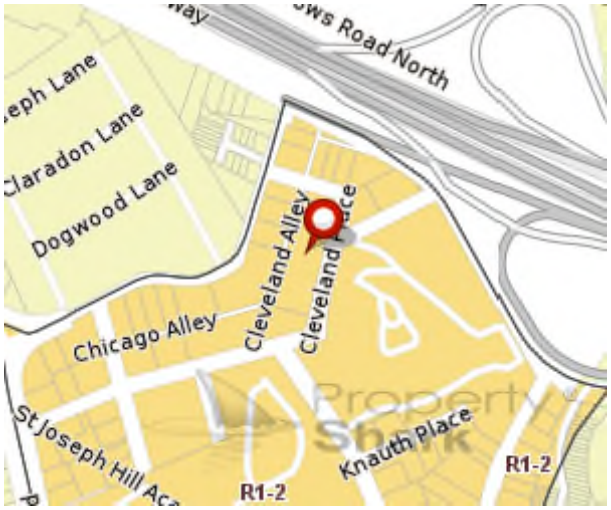
Rezoning Projects

No Rezoning Projects found.

For more information about zoning district regulations, click here.

This map was created from the NYC Department of City Planning's online zoning map files. It includes updates found in those files through 12/15/16.

Residential **R1-2**



R1 districts are leafy, low-density neighborhoods of large, single-family detached homes on spacious lots. Maped in Jamaica Estates in Queens, and Fieldston in the Bronx. Although new homes in R1-1 districts must be on larger and wider lots than homes in R1-2 and R1-2A districts, generous yard requirements and high open space ratio (OSR) or lot coverage regulations preserve the open space that characterizes all R1 districts More info

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution.

H3. Floor Area Ratio & Air Rights

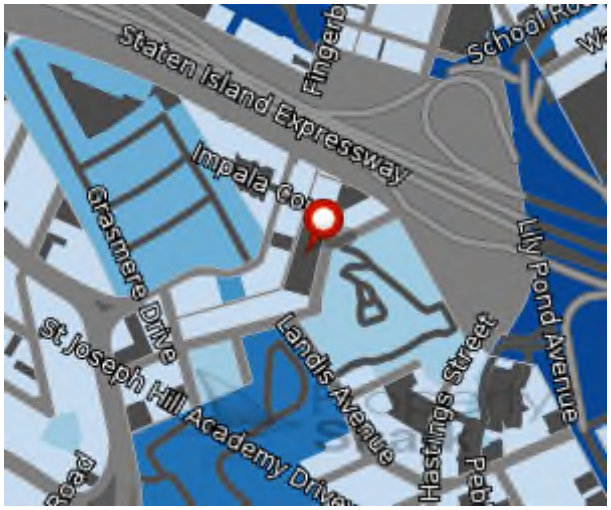
There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

Area of lot in square feet		**43,111**
FAR	x	**0.5**
Maximum usable floor area of building	=	**21,556**

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

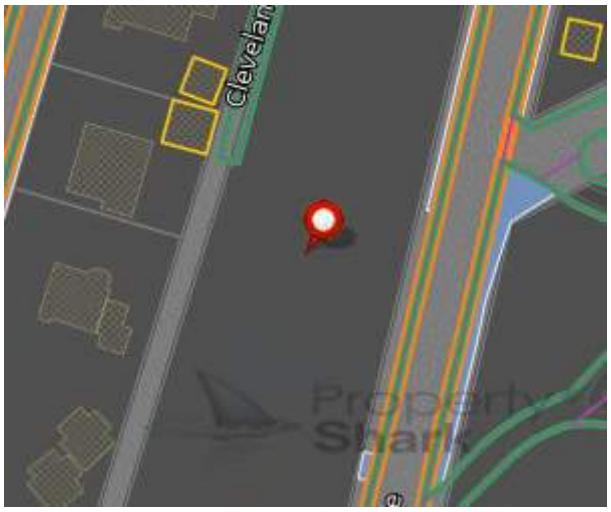
Maximum usable floor area		**21,556**
Usable floor area	-	**0**
Unused buildable square feet ("air rights")	=	**21,556**



Residential FAR	**0.5**
Facility FAR	**1**

H4. Planimetric Map

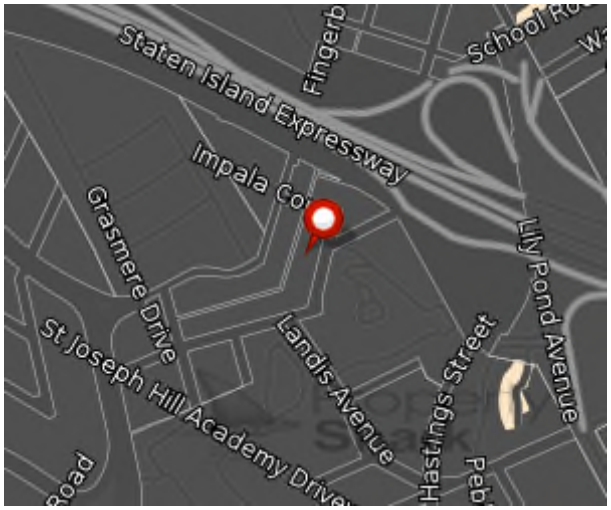
This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.



I. Complaints & Violations

I1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.



This map shows housing violations in residential buildings, giving more weight to more recent and more severe violations.

- Very high
- High
- Medium
- Low
- Very low

Class description ?

We do not have any record of violations in our database. Status can be verified here.

I2. ECB Violations

There are eleven city agencies that administer the City's quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department
- Landmarks Preservation Commission (LPC)
- Department of Sanitation

PropertyShark obtains its ECB NOV records from the DOB and updates them nightly. Records go back to 1988

No records found.

For more information about the ECB and the types of NOVs that it handles, visit its home page.

J. Neighborhood

J1. Distance to Schools

J4. Demographics By Zip Code

Demographic data shown in this section was gathered from the 2014 American Community Survey and refers to zip code **10305**.

Population Demographics

Total population	41,471
Female population	52.2%
Male population	47.8%
Median age	40.1
Male median age	39.7
Female median age	40.5

Race & Ethnicity

White	77.5%
Black or african american	4.3%
American indian	0.8%
Asian	12.0%
Other	5.4%

Education

No highschool	5.9%
Some highschool or college	56.4%
Bachelors degree	19.0%

Other

Citizens	87.7%
Citizens born in US	62.6%
English speakers	90.4%

Journey to Work

Work in a metropolitan area	100.0%
Work at home	2.4%
Go to work by car	57.4%
Go to work after 10 am	16.6%

Economic/Employment

Average household income	$83,184
White collar	82.4%
Blue collar	17.6%

Housing

Family households	70.3%
Households with kids	34.5%
Housing units	15,978
Occupied housing units	14,884
Owner occupied units	66.2%
Average number of people per household	2.73
Median year structure built	1971
Houses with mortgages	68.6%

Wealth

Median value for units with a mortgage	$407,400
Median value for units without a mortgage	$419,800
Median gross rent	$1,181
Median housing costs per month	$1,458
Population in poverty	11.1%

K. Hazards & Environment

K1. Toxic Sites

Get a Phase I Environmental Report Site Assessment or a Home Environmental Database Report for this property directly from Toxics Targeting by accessing this link.

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

Call **800-2-TOXICS** *(800-286-9427 NYS only)* or **607-273-3391** for more info.

Toxic Sites

Toxic site data reported for this property: **No**

Neighboring toxic sites: **1**

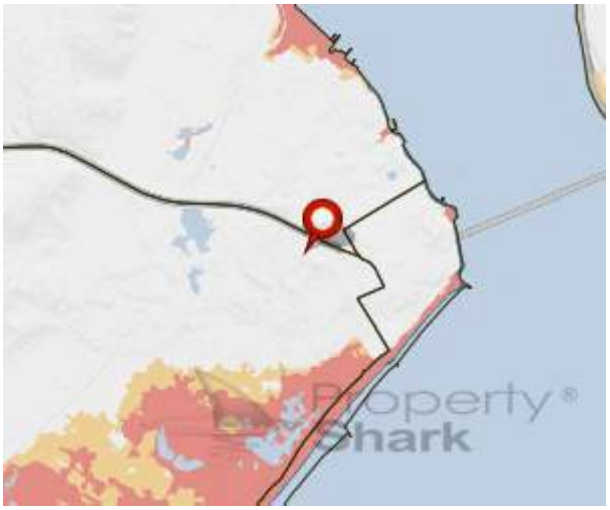
- Other Toxic Sites:
  - x **1** Petroleum Bulk Storage

Total toxic sites near the property: **No**

Map Disclaimer: Mapped locations are approximate; identified sites based on current and/or historic information; site symbols can refer to large properties; additional toxic sites are not mapped; contamination problems can impact properties far from toxic sources; sites include known and potential hazards; regulatory status of sites may have changed.

K2. Fema Flood Zones Map

On this map, you can see if the property is located in a special flood hazard area.



Note: This map was constructed using Fema Flood DFIRM data set. It does not take into account changes made after Hurricane Sandy.

Link to the map for this property at **FEMA's Map Service Center** (may not be available in all locations).

FEMA Flood Zoning

FEMA flood zone(s)	**X**

Property Report for:

57 Cleveland Pl, Staten Island, NY 10305

B. Overview

B1. Overview

Address

Primary address	57 Cleveland Pl
Alternate address(es)	25 REAR Landis Ave 18 Hastings St 25 Landis Ave Other Alternate Addresses
Zip code	10305
Borough	Staten Island
Block & lot	03087-0001
Sanborn map	503 314
Tax map	51301

Owner

Name	St John Villa Academy
Address	57 Cleveland Pl Staten Island, NY 10305-3796

Property Taxes

Tax class	4
Tax assessor's market value	$19,114,000
Projected tax assessor's market value	$99,958,000
Current tax bill	$0
Projected tax bill	$0

Neighborhood

Neighborhood	Grasmere - Concord
Community district	2
Closest Police station	1.02 Miles
Closest Fire station	0.29 Miles
School district number	31
Census tract	20

Hazards & Environment

Toxic site on this property	Yes
Neighboring toxic sites	No

Building

Building class	Parochial School, Yeshiva (W2) ?
Building sqft	108,275
Building dimensions	135 ft x 61 ft
Year built	1920 (estimated)
Stories	3
Year last altered	2005 ?

Use

Residential units	1
Residential sqft	10,800
Average residential unit size	10,800
Commercial units	5
Other sqft	22,365

Lot

Lot sqft	269,400 ?
Lot dimensions	449 ft x 600 ft
Corner lot	NW
Buildings on lot	1

Zoning

Zoning districts	R1-2 ?
Zoning map	27c

Floor Area Ratio (FAR)

Residential FAR	0.5
Facility FAR	1
FAR as built	0.40 ?
Allowed usable floor area	134,700
Usable floor area as built	107,760

Easements

Owner	Mta Bridges and Tunne
Type	Land Easement
Lot sqft	5,200
Lot frontage	30
Lot depth	116
Assessment	$3,600

F. Sales & Value

F1. Sales & Values Maps

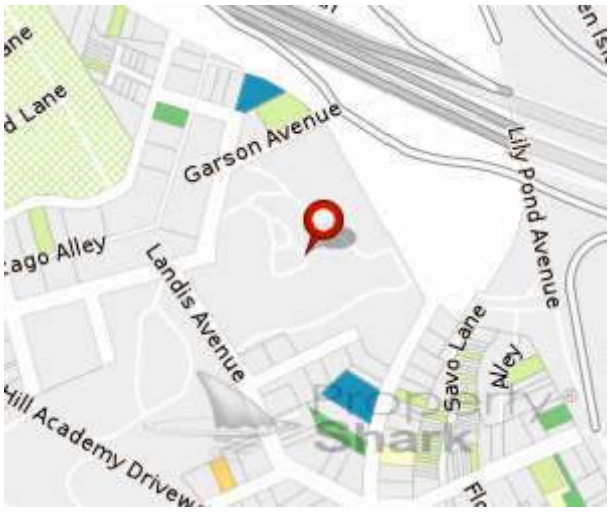
Date of Last Sale

This map shows the most recent sales around the subject property, with darker colors indicating more recent sales.

- First half of 2017
- Second half of 2016
- First half of 2016
- Second half of 2015
- First half of 2015
- All 2014
- 2012 - 2013
- < 2012
- No data

The map is based only on valid sales with a recorded price over $1000.

Price per Square Foot



On this color-coded map, view the price paid per square foot around the subject property.

- Below $100
- $100 - $250
- $250 - $400
- $400 - $550
- $550 - $700
- $700 - $850
- $850 - $1000
- Above $1000
- No data

Multiple properties on the same parcel.
Color coordinates with the price ranges above.

G. Property Tax

G1. Property Tax

Market Value

The property tax assessment process starts when the city's assessors estimate a property's market value, based upon the available information. The assessors use three approaches to value the property: sales, cost and income. The *market value* is generally defined as what the property would sell for in a competitive and open market.

		2016/2017		2017/2018
Land market value		$6,735,000		$6,735,000
Building market value	+	$12,379,000	+	$93,223,000
Market value	**=**	**$19,114,000**	**=**	**$99,958,000**

Assessed Value

Assessed value is a calculation of the property value for tax purposes. It usually represents a percentage of the market value and is subject to limits on annual increases. Sometimes the city will exempt part of the assessed value from taxation, as an incentive to make improvements to an existing structure or to build on a vacant lot. There are also several tax reductions programs for residential properties that may apply and may lower the property's tax bill.

		2016/2017		2017/2018
Land assessed value		$3,030,750		$3,030,750
Building assessed value	+	$5,570,550	+	$41,950,350
Assessed value	=	$8,601,300	=	$44,981,100
Exemptions granted by city	-	$8,601,300	-	$44,981,100
Net assessed value	**=**	**$0**	**=**	**$0**

Transitional Value

While the city's assessors have noted the rapid appreciation of property in New York City, the state understands that it would be burdensome for property taxes to rise too fast. Therefore, increases in the *assessed value* are phased in over a number of years. This introduces the *transitional assessed value*, which is a limit on the portion of the assessed value introduced into the tax base. When the *assessed value* is phased in, sometimes the *exemptions* are as well.

		2016/2017		2017/2018
Transitional land value		$2,546,910		$2,667,870
Transitional building value	+	$5,640,026	+	$12,995,095
Transitional value	=	$8,186,936	=	$15,662,965
Transitional exemption value	-	$8,186,936	-	$15,662,965
Transitional net assessed value	**=**	**$0**	**=**	**$0**

Taxable Value

The *taxable value*, for 2016/2017, is the smaller of the city's *net assessed value* and the *transitional net assessed value*.

Taxable value	=	$0

Property Tax

Base tax is an estimate of what an owner **not** benefiting from tax exemptions or abatements would pay and is determined by multiplying the assessed value by the tax rate. *Current tax* is calculated by multiplying the taxable value by the tax rate.
For a very small number of properties, owner-related exemptions (for which we currently don't have information) apply, and so the values given below may be slightly different from the official ones. In addition to exemptions, the city also grants *tax abatements* to some properties. An *abatement* is simply a discount which is subtracted directly from the current tax. This results in the *property tax*, the amount the current owner pays.

Tax description	Billable value 16/17		Tax rate 16/17		Tax amount 16/17
Base tax	$8,186,936	*	10.5740%	=	$865,686.61
Exemption	$8,186,936			-	$865,686.61
Current tax	$0	*	10.5740%	=	$0.00
Total abatements				-	$0.00
Property tax				**=**	**$0.00**

Tax description	Billable value 17/18		Tax rate 17/18		Tax amount 17/18
Base tax	$15,662,965	*	10.5740%	=	$1,656,201.92
Exemption	$15,662,965			-	$1,656,201.92
Current tax	$0	*	10.5740%	=	$0.00

Tax description	Billable value 17/18	Tax rate 17/18		Tax amount 17/18
Total abatements			-	$0.00
Property tax			=	**$0.00**

For more information please visit New York City's property tax section. Also, you can view this property's assessment, tax bill and account statements here.

G2. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the J-51 Program and the 421a Program.

Exemption Values 16/17

Land exemption value	**$3,030,750**
Total exemption value	**$8,601,300**

Exemption Values 17/18

Land exemption value	**$3,030,750**
Total exemption value	**$44,981,100**

Transitional Exemptions 16/17

Transitional land exemption value	**$2,546,910**
Transitional total exemption value	**$8,186,936**

Transitional Exemptions 17/18

Transitional land exemption value	**$15,662,965**
Transitional total exemption value	**$15,662,965**

Code	Exemption description	Transitional exemption value	Changing exempt total
1022-01 (25120)	Nonprof Orgnztn-Educational	$7,986,867	$200,069

G3. Tentative Values

Every year in January, the NYC Department of Finance Commissioner publishs the tentative property assessment roll for the current fiscal year. All properties are valued by law according to their condition on the taxable status date of January 5th. Owners who believe that the Department of Finance has used incorrect information to determine their market value may file forms providing corrections. After Finance verifies the complaints, the agency will make any corrections before the final assessment roll is published on May 25. The final roll will also include changes, based on the decisions made by the New York City Tax Commission, an independent City agency, as well as new information Finance gathers about abatements, exemptions and other adjustments. In June, Finance will use the final roll and new tax rates adopted by the City Council to generate property tax bills for the fiscal year beginning July 1st.

Tentative Transitional Values

Tentative transitional land	**$2,667,870**
Tentative transitional total	**$15,662,965**
Tentative exempt land	**$2,667,870**
Tentative exempt total	**$15,662,965**

Tentative Actual Values

Tentative actual land	**$3,030,750**
Tentative actual total	**$44,981,100**
Tentative actual exempt land	**$3,030,750**
Tentative actual exempt total	**$44,981,100**

G5. Assessment History

Year	Building class	Market value	Assessed value	Taxable	Tax rate%	Base tax	Property tax

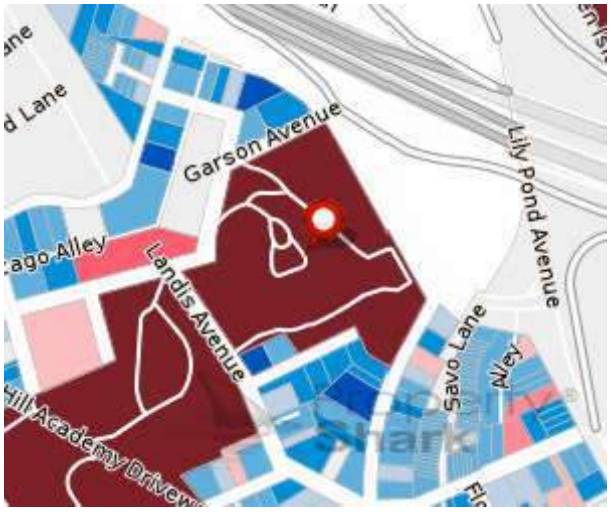
G6. Tax per Square Foot



This map shows property tax in correlation with square footage of the property.

Above $10.00	$4.00 - $5.00
$9.00 - $10.00	$3.00 - $4.00
$8.00 - $9.00	$2.00 - $3.00
$7.00 - $8.00	$1.00 - $2.00
$6.00 - $7.00	Below $1.00
$5.00 - $6.00	No Data

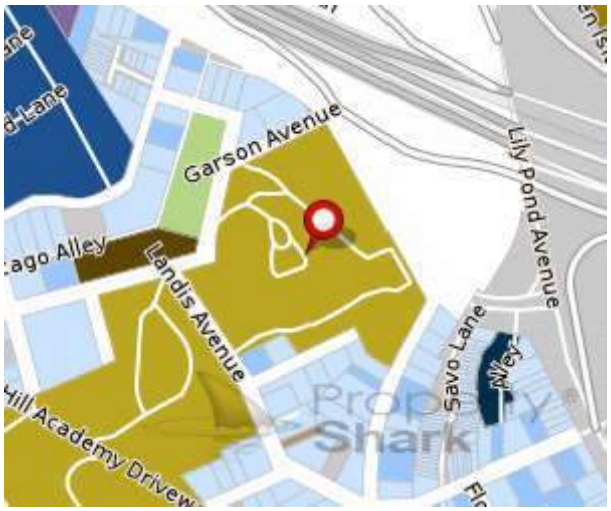
Property tax	**$1,656,202**
Tax year	**2017/2018**
Square feet	**108,275**
Tax per sqft	**$15**

H. Development & Use

H1. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found here.



Building class: **Parochial School, Yeshiva (W2)**

H2. Zoning

New York City is divided into three basic *zoning districts:* residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

Zoning Designation

Residential **R1-2**

Rezoning Projects

No Rezoning Projects found.

For more information about zoning district regulations, click here.

This map was created from the NYC Department of City Planning's online zoning map files. It includes updates found in those files through 12/15/16.

Residential R1-2

R1 districts are leafy, low-density neighborhoods of large, single-family detached homes on spacious lots. Maped in Jamaica Estates in Queens, and Fieldston in the Bronx. Although new homes in R1-1 districts must be on larger and wider lots than homes in R1-2 and R1-2A districts, generous yard requirements and high open space ratio (OSR) or lot coverage regulations preserve the open space that characterizes all R1 districts More info

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution.

H3. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet.
Max FAR depends on several factors including zoning, location and use. FAR values for this property are: Facility FAR 1,Commercial FAR 0 and Residential FAR .5.

Area of lot in square feet		**269,400**
FAR	x	**.5**
Maximum usable floor area of building	=	**134,700**

Available Air Rights by Parcel

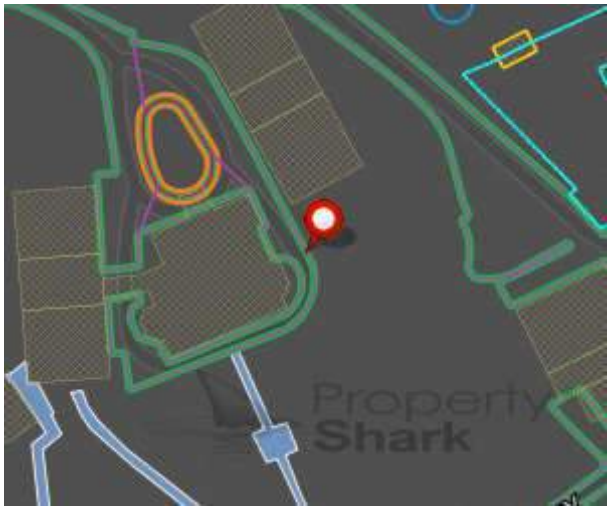
The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		**134,700**
Usable floor area	-	**107,760**
Unused buildable square feet ("air rights")	=	**26,939**

Unused buildable square feet: **26,939**

H4. Planimetric Map

This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.



BIN	Type	Status	Roof height	Ground elevation
5107480	Building	Constructed	25	103

H5. Permits

Pre filing date	Job type	Initial cost	Job status	Work type	Link to job
11/14/2016	Alteration type 3	$5,000	Application processed - completed	Antenna	
Replacement of existing telecommunication antennas and related RRH units on roof. Retrofit existing cabinet in the existing equipment shelter on grade. all work in compliance with TPPN 5/98. no change to occupancy, use, or egress.					
07/14/2016	Alteration type 2	$10,000	Application processed - completed	Fire alarm	
Replacement of facp and devices of an existing approved fire alarm system					
02/10/2016	Alteration type 3	$5,000	Application processed - completed	Antenna	
Replacement of existing telecommunications antenna with installation of related RRH unit on roof. retrofit of existing cabinet in existing telecommunications compound on grade. all work in compliance with TPPN 5/98. no change to occupancy, use, or egress.					
12/14/2015	Alteration type 3	$5,000	Application processed - completed	Antenna	
Replacement of existing telecommunications antenna with installation of related RRH units on roof. retrofit of existing cabinet in existing telecommunications compound on grade. all work in compliance with TPPN 5/98. no change to occupancy, use, or egress					
08/26/2015	Alteration type 2	$20,000	Application processed - completed	Fire alarm	
Installation of a manual and automatic smoke/heat/CO detection fire alarm system					
12/22/2014	Alteration type 2	$4,050	Plan exam - approved	General construction	
Install new non-bearing partitions and TW0(2) doors. no change in occupancy ,use or egress. all as per plans herewith filed					
11/12/2014	Alteration type 2	$15,000	Plan exam - disapproved	Plumbing	
Install new water booster pump in sub-cellar of the existing building. No change in use, occupancy or egress. all as per plans herewith submitted					
10/29/2014	Alteration type 2	$250,000	Plan exam - approved	General construction	
Replace existing windows and exterior doors, facade repair. install new roofing no change in use, occupancy or egress. all as per plans herewith submitted					
07/03/2013	Alteration type 2	$32,000	Application processed - completed	Plumbing, boiler	
Replace boiler and gas burner					
07/17/2012	Alteration type 2	$45,000	Permit issued - entire job/work	General construction	
Convert existing classrooms to administrative offices. All as per plans herewith submitted . no change to use ,egress or occupancy.					
06/26/2012	Alteration type 2		Permit issued - entire job/work	Boiler, fuel burning	
Replace boiler and reinstall oil burner (NYC boiler no. 82207-03). this application is filed in conjunction with laa no. 510087095.					
06/21/2012	Alteration type 2	$63,600	Permit issued - partial job	Plumbing, general construction	
Remove existing toilet fixtures and replace with new. create new staff toilet. Install new tile . no change in use, occupancy or egress all as per plans herewith submitted.					

Pre filing date	Job type	Initial cost	Job status	Work type	Link to job
06/21/2012	Alteration type 2	$25,000	Plan exam - approved	Plumbing	
Install backflow prevention device at the above location. no change in use, occupancy or egress. all has per plans herewith filed					
11/07/2011	Alteration type 2	$15,000	Permit issued - entire job/work	General construction	
Erect new non-bearing partitions. replace existing hung ceiling with new. no change in use, occupancy or egress. All as per plans herewith submitted.					
06/27/2011	Alteration type 3	$25,000	Plan exam - disapproved	Antenna	
Installation of additional telecommunications cabinet on existing concrete pad on grade. installation of related antennas on roof. initial installation appro ved under application #500350345 all work in compliance with TPPN 5/98. no change to occupancy, use, or egress.

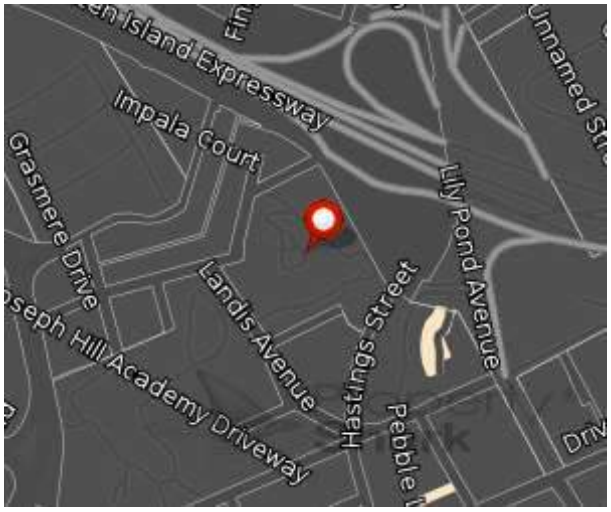
To confirm complaint status, check the HPD website.

I2. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.



This map shows housing violations in residential buildings, giving more weight to more recent and more severe violations.

Very high
High
Medium
Low
Very low

Class description ?

We do not have any record of violations in our database. Status can be verified here.

I3. ECB Violations

There are eleven city agencies that administer the City's quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department
- Landmarks Preservation Commission (LPC)
- Department of Sanitation

PropertyShark obtains its ECB NOV records from the DOB and updates them nightly. Records go back to 1988

No records found.

For more information about the ECB and the types of NOVs that it handles, visit its home page.

J. Neighborhood

J1. Facilities

The Department of City Planning has information related to selected facilities and program sites in New York City. The list below shows facilities for this property.

Name	Type	Capacity	Capacity type
Saint John Villa Academy High School	Private elementary or secondary school	633	Total enrollment
Saint John Villa Academy Elementary	Private elementary or secondary school	309	Total enrollment

J2. Distance to Schools

Elementary School Proximity

This map shows zoned Elementary School and other public and private schools available in the area, with exact distances from the subject property to the school of interest.

Elementary Schools:
District Boundary
Attendance Zone
Unzoned Area

School Locations:
Zoned
Other Public
Charter
Private

Attendance Elementary School(s)

School	Distance (miles)	School code	Principal	Phone number
Ps 39 Francis J Murphy Jr	0.294	31R039	MS. Tracey a. Wright	447-4543

J5. Demographics By Zip Code

Demographic data shown in this section was gathered from the 2014 American Community Survey and refers to zip code **10305**.

Population Demographics

Total population	41,471
Female population	52.2%
Male population	47.8%
Median age	40.1
Male median age	39.7
Female median age	40.5

Race & Ethnicity

White	77.5%
Black or african american	4.3%
American indian	0.8%
Asian	12.0%
Other	5.4%

Education

No highschool	5.9%
Some highschool or college	56.4%
Bachelors degree	19.0%

Other

Citizens	87.7%
Citizens born in US	62.6%
English speakers	90.4%

Journey to Work

Work in a metropolitan area	100.0%
Work at home	2.4%
Go to work by car	57.4%
Go to work after 10 am	16.6%

Economic/Employment

Average household income	$83,184
White collar	82.4%
Blue collar	17.6%

Housing

Family households	70.3%
Households with kids	34.5%
Housing units	15,978
Occupied housing units	14,884
Owner occupied units	66.2%
Average number of people per household	2.73
Median year structure built	1971
Houses with mortgages	68.6%

Wealth

Median value for units with a mortgage	$407,400
Median value for units without a mortgage	$419,800
Median gross rent	$1,181
Median housing costs per month	$1,458
Population in poverty	11.1%

K. Hazards & Environment

K1. Toxic Sites

Get a Phase I Environmental Report Site Assessment or a Home Environmental Database Report for this property directly from Toxics Targeting by accessing this link.

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

Call **800-2-TOXICS** *(800-286-9427 NYS only)* or **607-273-3391** for more info.

Toxic Sites

- St John Villa Academy Elementary

This is a school with reported toxic risks.

Total known or potential toxic sites on property: **4**

- Leaking Tanks and Spills:
  - x **2** Spill
  - x **1** Tank Test Failure
- Other Toxic Sites:
  - x **1** Petroleum Bulk Storage

Neighboring toxic sites: **No**

Total toxic sites near the property: **2**

This toxic site data is found outside any specific property boundary.

- Leaking Tanks and Spills:
  - x **1** Spill greater than 25 gal/lbs
  - x **1** Spill

Map Disclaimer: Mapped locations are approximate; identified sites based on current and/or historic information; site symbols can refer to large properties; additional toxic sites are not mapped; contamination problems can impact properties far from toxic sources; sites include known and potential hazards; regulatory status of sites may have changed.

K2. Fema Flood Zones Map

On this map, you can see if the property is located in a special flood hazard area.

Moderate to Low Risk Areas
X < 1% ACF
0.2 PCT ACFH * < 1% ACF

High Risk Areas
A 1% ACF, no base flood elevations
AE 1% ACF, periodic base flood elevations

High Risk-Coastal Areas
VE =/> 1% ACF + Storm Waves

Floodway
COBRA **
Open Water

* 0.2% Annual Chance of Flood Hazard
** Coastal Barrier Resources System Area
ACF = Annual Chance of Flooding

Note: This map was constructed using Fema Flood DFIRM data set. It does not take into account changes made after Hurricane Sandy.

Link to the map for this property at **FEMA's Map Service Center** (may not be available in all locations).

STATE OF NEW YORK
DEPARTMENT OF HEALTH

2364 Corning Tower Governor Nelson A. Rockefeller Empire State Plaza Albany, New York 12237

1. TO THE NEW YORK STATE DEPARTMENT OF HEALTH:

I hereby apply to **Inspect** □ or **Receive Copies** ☒ of the following records (use additional sheets as needed and attach)

records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for:

57-61 Cleveland Place, Staten Island NY. Block 3087 Lot 1

NAME: Ashanti Callender PHONE: ( ) 646-388-9513 EMAIL: acallender@akrf.com

FIRM: AKRF Inc.

ADDRESS: 440 Park Avenue South, 7th Floor, New York, NY 10016

SIGNATURE: _____ DATE: 4/14/2017

2. TO THE APPLICANT:

-Records Provided

☐ The reproduction costs for the records are $_____. Please forward a check payable to the New York State Department of Health to the address listed above. If we do not receive your payment within **60** days, we will assume that you no longer wish to receive the materials, and they will be sent back to the originating unit. Accordingly, any future requests for information will require an initial deposit before processing.

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided:_____).

-Records Not Available

☐ Records cannot be found after a diligent search.

☐ The Department does not maintain records indicated, please contact:_____

-Records Denied or Redacted

I hereby certify that access to the records—or part of the records—have been denied to the applicant for the reason(s) checked below (You may appeal this denial of access in writing within 30 days to the Records Access Appeals Officer, Empire State Plaza, 1455 Corning Tower, Albany New York 12237):

☐ Specifically exempt by other statute(s).

☐ Unwarranted invasion of personal privacy.

☐ Would impair present or imminent contract awards or collective bargaining negotiations.

☐ Are examination questions or answers.
Are inter-agency or intra-agency materials that are not: -statistical or factual tabulations or data
-instructions to staff that affect the public
-final agency policy or determinations; or
-external audits, including but not limited to audits performed by the comptroller and the federal government.

☐ Are trade secrets.

☐ Could, if disclosed endanger the life of any person.

☐ Are compiled for law enforcement purposes and which, if disclosed would:
-interfere with law enforcement investigations or judicial proceedings
-deprive a person of the right to a fair trial or impartial adjudication
-identify a confidential source or disclose confidential information relating to a criminal investigation, or
-reveal criminal investigative techniques and procedures

☐ Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures.

APPENDIX L

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

ELIZABETH MATAMOROS

ENVIRONMENTAL SCIENTIST/PLANNER

Elizabeth Matamoros is an Environmental Scientist in AKRF's Hazardous Materials group. She is a recent graduate from Harvard University with a degree in Environmental Science and Public Policy. She is responsible for conducting Phase I Environmental Site Assessments (ESAs), and supporting the hazardous materials group in preparing Phase II Subsurface Investigations and hazardous materials assessments for EASs and EISs; remediation planning and oversight; and developing Remedial Action Plans and Health and Safety Plans. Elizabeth also works as a Planner in AKRF's Environmental Assessment and Planning Group in their Hudson Valley Office. She provides SEQR support to municipal and private clients, assists in the preparation of Master Plans, and participates in public engagement efforts.

BACKGROUND

Role in Project

Junior Environmental Scientist

Education

B.A., Environmental Science and Public Policy, Earth and Planetary Sciences Minor Harvard College, 2014

Certifications

OSHA 40-hour Health & Safety Training for Hazardous Waste Operations, November 2014
NYSDEC Soil & Sediment Erosion Control - SWPPP Inspector, March 2015
OSHA 8-hour Health & Safety Training for Hazardous Waste Site Personnel Refresher, September 2015OSHA 10-hour Construction Safety Training, November 2015

Years of experience

Date started at AKRF: June 2014

RELEVANT EXPERIENCE - AKRF

New York City School Construction Authority (SCA), Environmental Consulting Hazardous Materials Services

AKRF has undertaken various assignments under two consecutive hazardous materials on-call contracts, including environmental assessment, remedial design, and plumbing disinfection consulting tasks. For potential new school sites, assignments include initial due diligence, Phase I environmental site assessments (ESAs) and multi-media subsurface investigation of soil, groundwater, and soil vapor to determine the suitability of a site for development as a school, likely remediation requirements, and associated costs. For sites undergoing design and development, assignments include preparation of remediation plans, design of sub-slab depressurization systems (SSDS) and contract specifications, and construction oversight. The work has also included conducting Phase I ESAs and indoor air quality testing, preparation of specifications, supervision of storage tank removals, and investigation and remediation of spills for existing schools. Due to the sensitivity of school sites, work under this contract is often conducted on short notice and during non-school hours. Ms. Matamoros conducts Phase I ESAs, Phase II subsurface investigations, plumbing disinfections, indoor air quality investigations, and SSDS inspections as part of this contract.

Various Phase I ESAs

Ms. Matamoros prepared Phase I ESAs in accordance with ASTM E1527-13 and EPA's All Appropriate Inquiry (AAI) rule, which included conducting site visits, reviewing federal and state regulatory databases, and collecting historical fire insurance maps and building records from the municipality for review in determining possible hazardous environmental conditions. Representative projects include:

- Manhattan College (various), Bronx, New York
- Columbia University (various), New York, New York
- 37 Otsego Street, Brooklyn, New York
- West 108th Street, New York, New York
- St. Luke's Hospital, Cornwall, New York
- 9 Wilton Avenue, Norwalk, Connecticut
- 2 Soundview Drive, Greenwich, Connecticut
- 164 Mason Street, Greenwich, Connecticut
- 10 East Evergreen, New City, New York
- Amy's Kitchen Proposed Facility, Goshen, New York
- Proposed Soccer Training Facility, Orangetown, New York

Phase II Subsurface Investigations

Ms. Matamoros conducted Phase II Subsurface Investigations for sites being developed including:

- Amy's Kitchen Proposed Facility, Goshen, New York
- Proposed Soccer Training Facility, Orangetown, New York
- 37 Otsego Street, Brooklyn, New York
- Manhattan College (various), Bronx, New York

Crestwood 300-308 Columbus Avenue, Tuckahoe, NY – Environmental Monitoring

Investigation and remediation of the former gasoline filling station is being conducted under the New York State Brownfield Cleanup Program (BCP). AKRF completed a Phase I Environmental Site Assessment, Phase II Subsurface Investigation, and prepared a Remedial Action Plan (RAP) to address subsurface contamination during site redevelopment. For this project, Ms. Matamoros served as an on-site environmental monitor who conducted work zone and community air monitoring, and oversaw excavation and export of soil.

DEP Property, Carmel, NY – Soil, Sediment and Surface Water Sampling

This project was a continuation of ongoing work conducted by AKRF for a private client. Ms. Matamoros took soil, sediment, and surface water samples for part of an off-site investigation.

87 Gedney Way, White Plains NY – Groundwater Sampling

This project was a continuation of ongoing work conducted by AKRF for the City of White Plains, which previously included a landfill closure. Ms. Matamoros screened wells for methane, measured depth to groundwater, and took groundwater samples from the site.

REBECCA KINAL, P.E.

SR. TECHNICAL DIRECTOR-ENVIRONMENTAL ENGINEER

Rebecca Kinal has over twelve years of experience in the assessment and remediation of soil and groundwater contamination and other hazardous/non-hazardous waste problems. Her hydrogeologic experience includes in-situ permeability testing, drilling supervision, and computer modeling of groundwater flow. Her experience with soil and groundwater contamination includes underground storage tank leak investigations; hazardous soil removal and disposal; design and operation and maintenance (O&M) of groundwater remediation systems; soil and water sampling; soil gas surveys; fate and transport modeling; wastewater discharge permit preparation; and project coordination with federal, state, and local authorities.

Prior to her employment with AKRF, Ms. Kinal was a Project Engineer with General Physics Corporation in Columbia, Maryland, where her responsibilities included overseeing fieldwork, preparing and reviewing technical reports, computer modeling, designing remediation systems, and writing proposals.

BACKGROUND

Role in Project

Project Manager

Education

M.S., Hydrogeology, Rensselaer Polytechnic Institute, 1995

B.S., Civil Engineering, Lafayette College, 1992

Years of Experience

Year started in company: 2000

Year started in industry: 1996

RELEVANT EXPERIENCE

Roosevelt Union Free School District, Roosevelt, NY

Ms. Kinal is managing environmental investigation and remediation activities for the sites of three new elementary schools and a new middle school in Roosevelt, New York. Remediation activities include removal/closure of contaminated dry wells and underground petroleum storage tanks, and excavation and off-site disposal of petroleum- and pesticide-contaminated soil.

Queens West Development Project, Long Island City, NY

For over 20 years, AKRF has played a key role in advancing the Queens West development, which promises to transform an underused industrial waterfront property into one of largest and most vibrant mixed-use communities just across the East River from the United Nations. AKRF has prepared an Environmental Impact Statement that examines issues pertaining to air quality, land use and community character, economic impacts, historic and archaeological resources, and infrastructure. As part of the project, AKRF also undertook the largest

remediation ventures completed to date under the NYSDEC Brownfields Cleanup Program (BCP). Ms. Kinal helped prepare the Remedial Work Plan (RWP) and oversaw the remediation of Parcel 9, a 1.8-acre former industrial site. Remediation includes installation of a sheet pile containment wall, excavation of coal tar- and petroleum-contaminated soil under a temporary structure to control odors during remediation, vapor mitigation for the future buildings, and institutional controls. Upon completion of the remediation activities, Ms. Kinal managed the preparation of a Final Engineering Report (FER) to document the clean-up activities. The NYSDEC issued a Certificate of Completion (COC) for the Parcel 9 site in December 2006. Ms. Kinal continues to oversee post-remediation monitoring and site management activities to ensure that the remedy remains in-place and effective.

NYCSCA Mott Haven School Campus, Bronx, NY

Ms. Kinal provided environmental consulting services to the selected environmental remediation contractor for this former manufactured gas plant in the Mott Haven neighborhood of the Bronx, which was remediated under the NYSDEC BCP. These services included: preparation of an in situ sampling plan and excavation plan for waste characterization and disposal; supervision of waste characterization sampling activities; development and implementation of a community air monitoring program during all remediation activities; and daily reporting to the NYC School Construction Authority.

Shell Service Station, Millwood, NY

Ms. Kinal planned and oversaw a Phase I Environmental Site Assessment and Phase II Subsurface Investigation of this active gasoline station in northern Westchester County. The Phase I/Phase II investigations were performed for the potential buyer of the property who wished to redevelop it with a more modern service station and convenience store. Ms. Kinal also prepared a conceptual remediation plan to address several areas of petroleum contamination identified during the Phase II. The plan, which was approved by NYSDEC, will be implemented in conjunction with the site redevelopment activities to achieve closure for several spills reported at the site.

Pelham Plaza Shopping Center Site Investigation & Remediation, Pelham Manor, NY

Ms. Kinal managed a Site Investigation at Pelham Plaza, an approximately ten-acre site that formerly contained a manufactured gas plant. The site was investigated under a voluntary clean-up agreement entered into with the NYSDEC by the site owner. The site investigation included advancing over 100 soil borings with continuous soil sampling to bedrock, installing monitoring and recovery wells, and conducting test pitting both indoor and outdoor locations to collect soil and groundwater samples and determine the extent of Non-Aqueous Phase Liquid (NAPL). The investigation also included: soil gas sampling to determine contaminant concentrations in the vapors beneath the foundation of an on-site retail store; sediment sampling in an adjacent creek to identify off-site impacts; and a tidal survey to determine tidal influence on groundwater levels at the site. Ms. Kinal also oversaw on-going interim remedial measures, which include biweekly pumping of recovery wells to remove dense NAPL (DNAPL) from the site subsurface.

Yonkers Waterfront Redevelopment Project, Yonkers, NY

For this redevelopment along Yonkers' Hudson River waterfront, Ms. Kinal supervised the remediation of Parcels H and I that were contaminated with hazardous soil. During the remediation process, she reviewed the subcontractor health and safety plans, delineated the areas of excavation, and oversaw field activities to ensure compliance with the specifications and appropriate regulations. This property was remediated under the NYSDEC Environmental Restoration Program (ERP).

Yankee Stadium, Bronx, NY

Ms. Kinal performed the hazardous materials analysis for the Draft Environmental Impact Statement for the proposed new Yankee Stadium. The analysis included a Phase I Environmental Site Assessment of the entire

project area and Subsurface (Phase II) Investigation in areas where environmental conditions were identified. The Phase II investigation included geophysical surveys to search for potential underground storage tanks; and soil, soil gas, and groundwater sampling at over 40 locations to determine potential environmental impacts during and after the proposed construction.

MARCUS SIMONS

SENIOR VICE PRESIDENT

Marcus Simons is a Senior Vice President of AKRF with 20 years of environmental consulting experience, specializing in the assessment and cleanup of contaminated sites, including federal and state superfund, RCRA, TSCA, brownfield, voluntary cleanup and spill sites. His expertise includes health risk assessment, development of sampling plans, economic evaluations of remedial alternatives, and regulatory analysis. He is also AKRF's Health and Safety Officer with extensive experience of Hazardous Waste Operations and Emergency Response Standard (HAZWOPER) issues during sampling and remediation of contaminated sites.

Mr. Simons directs much of AKRF environmental due diligence work (recently managing environmental due diligence on Tishman/Blackrock's Peter Cooper/Stuyvesant Town acquisition, reportedly the largest real estate transaction in US history), including supervising preparation of numerous Phase I and Phase II Environmental Site Assessments, as well as more complex multi-site and litigation-related projects. Mr. Simons manages preparation of the contaminated-materials portions of AKRF's Environmental Impact Statements and Environmental Assessments and has experience with procedures for hazardous material requirements under NEPA and New York SEQRA/CEQR and E-designation programs. He also has extensive experience in statistics, selection of sites for controversial facilities, and federal and state wetland regulations and waterfront permitting. In addition to analytical work, Mr. Simons has considerable experience in presenting results to regulatory agencies and the general public.

Mr. Simons has managed some of the most complex cleanup sites in New York State including: the recently completed cleanup of a 12-acre PCB-contaminated former utility property in Flushing, Queens where a 3 million square foot retail/residential building is nearing completion (remediation was performed under the State Brownfield Cleanup Program, though the site was also subject to City jurisdiction under its E-Designation program); cleanup of the nation's largest former dental factory in Staten Island for reuse as single family housing; the investigation of several former manufactured gas plants; and the investigation and remediation associated with the reconstruction of the West Side Highway and Hudson River Park in Manhattan (from the Battery to 59th Street). Mr. Simons also has extensive experience with transportation projects (Second Avenue Subway, MTA/LIRR East Side Access, Cross Harbor Freight Movement Study, Route 9A Reconstruction), large-scale rezoning projects (Long Island City, Downtown Brooklyn, Jamaica) and public and private redevelopment work (Atlantic Yards, School Construction Authority, Queens West)

BACKGROUND

Role in Project

Health & Safety Officer

Education

M.S., Engineering and Public Policy, Carnegie-Mellon University, 1988

M.A. and B.A. (Honors), Mathematics/Engineering, Cambridge University, England, 1986

Certifications

Hazardous Waste Operations and Emergency Response Standard (HAZWOPER) – 40 Hour Site Worker and 8 Hour Site Supervisor

Years of Experience

Year started in company: 1995

Year started in industry: 1988

RELEVANT EXPERIENCE

CE Flushing Site, Flushing, NY

Mr. Simons directed the remediation of a former industrial site in Flushing, Queens, NY prior to its redevelopment as a 3 million square foot retail/residential complex. The property was cleaned up under the NYS Department of Environmental Conservation Brownfield Cleanup Program and the NYC Department of Environmental Protection's E-Designation requirements. The remedial measures included the removal of aboveground and underground storage tanks, excavation and off-site disposal of TSCA, RCRA and non-hazardous wastes, NAPL removal, and removal and investigation of on-site drainage structures. The remediation and subsequent construction involved obtaining (or obtaining waivers from) numerous permits including those for NYSDEC Tidal Wetlands, NYSDEC Long Island Wells, NYSDEC SPDES/Stormwater and NYCDEP Sewer Use.

Peter Cooper Village/Stuyvesant Town, New York, NY

Mr. Simons directed the purchaser's environmental due diligence efforts for the bidding and subsequent acquisition of this 80-acre property in Manhattan. Much of the 110-building complex is underlain by former manufactured gas plants and Con Edison entered the site into NYSDEC's Voluntary Cleanup Program. Going forward Mr. Simons will manage oversight of activities that involve disturbance of MGP-contaminated soils, as well as future testing and potentially remediation.

MTA New York City Transit Manhattan East Side Transit Alternative (MESA)/Second Avenue Subway, New York, NY

Mr. Simons directed the contaminated material assessment for this multi-billion dollar transit initiative that would provide subway service to Manhattan's East Side. The assessment identified several hundred facilities along the alignment that could have impacted soil and/or groundwater and could require special materials handling and enhanced health and safety procedures. Additional evaluation of these sites is underway.

Ferry Point Park, Bronx, NY

Mr. Simons developed the material acceptance criteria (soil standards for capping materials) for the development of Ferry Point Park (including a golf course) in the Bronx. The New York City Department of Environmental Protection DEP and the New York State Departments of Health (DOH) and Environmental Conservation (DEC) agreed for the first time to relax their strict (TAGM 4046) criteria for clean soil, based on statistical analyses of background conditions and risk-based modeling.

Prince's Point, Staten Island, NY

Mr. Simons managed the complex cleanup (including the relocation of a contaminated tidal creek) of the nation's largest former dental factory site on Staten Island's waterfront. The site was on the State Superfund list. The future use of the site as single-family residential property entailed extensive negotiations with NYSDEC and NYSDOH. The project required obtaining (or obtaining waivers from) numerous permits including those for NYSDEC Tidal and Fresh Water Wetlands, USACOE (Nationwide) Permits, NYSDEC Coastal Erosion Hazard Area, NYSDEC SPDES and Stormwater, FEMA Modifications to Land in Floodplain, and USEPA Notification of PCB Waste Activity.

Route 9A Reconstruction, New York, NY

AKRF directed extensive studies for the reconstruction in Lower Manhattan proposed by the New York State Department of Transportation (NYSDOT) in cooperation with the Federal Highway Administration (FHWA). The project is arguably the most complex environmental analyses performed for a federally funded transportation project in New York City in the last 10 years. The firm was responsible for all environmental tasks as well as the preparation for the Draft, Supplementary, and Final Environmental Impact Statements (EISs) and Section 4(f)

Evaluation for this 5-mile $250 million reconstruction of Route 9A as part of the recovery effort following the events of September 11th, 2001. Mr. Simons managed the extensive hazardous materials investigations and prepared the contract specifications for contaminated soil and tank removal, including Health and Safety oversight.

Hudson River Park, New York, NY

Mr. Simons is managing hazardous materials issues for the ongoing Hudson River Park construction, located adjacent to the Route 9A roadway. Construction is ongoing and Mr. Simons directs health and safety oversight and remediation during construction.

Jamaica Rezoning, Queens, NY

As part of the preparation of an Environmental Impact Statement, Mr. Simons managed the hazardous materials assessment of a multi-block area. In addition to conducting the assessment, Mr. Simons made recommendation as to the properties where "E-Designations" (city-recorded institutional controls on future development) should be placed.

Outlet City, Long Island City, Queens, NY

In Long Island City, Mr. Simons managed the investigation and interim remediation of an old factory complex where large volumes of creosote were spilled. The investigations and interim remedial measures (IRMs) took place under the New York State's Voluntary Cleanup Program (VCP).

MTA/LIRR East Side Access Project, New York, NY

Mr. Simons managed the hazardous materials investigations for multiple sites in the Bronx, Manhattan, and Queens associated with the Environmental Impact Statement (EIS) for the Long Island Rail Road connection to Grand Central Terminal. Mr. Simons continues to be involved in health and safety oversight related to the construction of the project.

New York City Department of Transportation, Lead Paint Removal and Disposal on Bridges Project, New York, NY

Mr. Simons conducted a regulatory analysis of related to the removal of lead paint from nearly 800 bridges. This analysis included an evaluation of the regulatory compliance of various proposed procedures with federal and state hazardous and solid waste management requirements.

American Felt and Filter Company, New Windsor, NY

Mr. Simons prepared a Remedial Investigation (including exposure assessment) and Feasibility Study for the country's oldest active felt manufacturing facility, located in Orange County. This solvent-contaminated site is on the State Superfund List.

EXECUTIVE SUMMARY

At the request of the New York City School Construction Authority (NYCSCA), AKRF Engineering, P.C. (AKRF) conducted a Phase II Environmental Site Investigation (ESI) of the potential acquisition located at 57-61 Cleveland Place, Staten Island, New York 10305 (the "Site"). Alternative addresses for the Site include 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, and 18 Hastings Street. The Site consists of an approximately 7.2-acre property containing 8 buildings associated with a parochial school constructed between approximately 1891 and 2005, including: a 3-story elementary school with a partial cellar; a 2-story convent with a cellar; a 4-story chapel with a cellar; a 2- to 3-story high school; a 1- to 2-story gymnasium; a 2-story annex; a 1-story child development center; and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a swimming pool with a pool shed. The Site is being considered for acquisition and conversion to a public school facility by the NYCSCA.

AKRF prepared a Phase I Environmental Site Assessment (ESA) Report for the Site dated June 2017. The Phase I ESA identified on-site recognized environmental conditions (RECs) including: in-service fuel oil storage tanks with two closed-status spill listings and one recent tightness test failure; and historic fill of unknown origin, potential buried debris, and potential abandoned underground storage tanks (USTs). Off-site RECs include potential contamination from historic railroad tracks east of the Site, a nearby petroleum bulk storage facility, and a monitoring well noted on the public sidewalk between the two Site lots. The Phase I ESA also revealed environmental concerns associated with: suspect asbestos-containing materials (ACM), lead based paint (LBP), and polychlorinated biphenyl (PCB)-containing materials in the Site structures and/or in buried debris; a 55-gallon drum with unknown contents; and current and former water damage and potential for mold growth.

The purpose of the Phase II ESI was to determine whether the RECs and environmental concerns identified in the Phase I ESA Report have affected the suitability of the Site for use as a public school facility. Initial Phase II ESI field activities were performed on July 31 through August 3, and August 21 and 22, 2017, and consisted of a geophysical survey and the completion of 19 soil borings, 4 temporary monitoring wells, and 18 temporary soil vapor/sub-slab sampling points. A total of 38 soil samples, 1 groundwater sample, and 17 soil vapor/sub-slab samples were collected for laboratory analysis. Supplemental Phase II ESI activities were conducted on November 10 and 11, 2017, and consisted of a geophysical survey , completion of 5 soil borings and, and a Soil Vapor Assessment. A total of 10 soil samples, 2 sub-slab vapor samples, and 1 ambient air sample were collected for laboratory analysis during the supplemental Phase II activities.

Based on the results of the Phase II ESI, AKRF concludes the following:

- In addition to the three known fuel oil underground storage tanks (USTs) at the Site, the geophysical survey identified an anomaly indicative of a potential fourth UST south of the garage area. Additional metallic anomalies identified during the geophysical survey are attributed to stormwater and water service utilities.
- Apparent perched groundwater was encountered at 26.5 feet below ground surface (bgs) in one temporary well installed during the initial Phase II ESI. Saturated soil was observed from 10 to 20 feet bgs in soil boring SB-GA1, advanced during the supplemental Phase II ESI activities. Based on the Site elevation and United States Geological Survey (USGS) information, the groundwater table in the Site vicinity is expected to be greater than 100 feet bgs.

- Subsurface soil generally consists of a shallow layer of historic fill overlying apparent native sand and silt with some gravel and clay.
- Petroleum-related volatile organic compounds (VOCs) detected in several soil/sub-slab vapor samples above the corresponding New York State Department of Health (NYSDOH) background ranges are attributed to the on-site petroleum use/storage.
- Tetrachloroethene (PCE) and trichloroethene (TCE) detected above their corresponding NYSDOH air guideline values (AGVs) in sub-slab vapor samples collected under the elementary school sub-basement appear to represent an isolated condition and possibly related to the historic use of solvents for boiler maintenance activities.
- No VOCs were detected in soil at concentrations above their respective UUSCOs, and no polychlorinated biphenyls (PCBs) or herbicides were detected in any of the soil samples.
- Semivolatile organic compounds (SVOCs), metals, and pesticides detected in soil at concentrations exceeding their respective NYSDEC Part 375 UUSCOs and/or CP-51 SSCOs are attributed to background conditions and/or historic fill noted in the Site subsurface, and not to an on-site release.
- Metals detected in the unfiltered groundwater sample analyzed are attributed to sediment entrained in the groundwater during sampling. No metals were detected above Class GA Ambient Water Quality Standards.

Based on the findings of the Phase II ESI and our understanding that the existing on-site buildings would be converted for use as public schools, AKRF recommends the following:

- Modifications should be made to the elementary school's ventilation system, as necessary, to ensure that the partial sub-basement is separately ventilated from the remainder of the building.
- Any suspect asbestos-containing material (ACM), lead-based paint (LBP), and/or PCB-containing materials should be properly maintained in accordance with NYCSCA protocols, and any such materials affected by proposed renovation, demolition, or construction activities at the Site be identified and properly managed during those activities in accordance with all applicable regulations and NYCSCA policies and procedures.
- If excavation is required as part of proposed renovations, all excavated material should be properly characterized prior to transportation to an off-site disposal facility. In addition, any imported backfill should be tested to ensure that it conforms to NYCSCA requirements for environmentally-clean fill.
- The metallic anomaly identified south of the maintenance garage should be investigated to verify whether an underground storage tank is present. If a UST is present, it should be properly addressed in accordance with state and local regulations.

1.0 INTRODUCTION

1.1 Purpose

At the request of the New York City School Construction Authority (NYCSCA), AKRF Engineering, P.C. (AKRF) conducted a Phase II Environmental Site Investigation (ESI) of the property located at 57-61 Cleveland Place in Staten Island, New York (the "Site"). The legal description of the Site is Block 3087, Lot 1, and Block 3089, Lot 59. Alternative addresses for the Site include 25 Landis Avenue, 61 Cleveland Place, 8 Narrows Road South, and 18 Hastings Street. The Site consists of an approximately 7.2-acre property containing 8 buildings associated with a parochial school constructed between approximately 1891 and 2005, including: a 3-story elementary school with a partial cellar; a 2-story convent with a cellar; a 4-story chapel with a cellar; a 2- to 3-story high school; a 1- to 2-story gymnasium; a 2-story annex; a 1-story child development center; and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a swimming pool with a pool shed. The Site is being considered for acquisition and conversion to a public school facility by the NYCSCA. The Site location is shown on Figure 1. A Site Plan indicating Site features and the tax block and lot numbers is provided as Figure 2.

The Phase II ESI was performed to determine whether the recognized environmental conditions (RECs) and/or Vapor Encroachment Conditions (VECs) identified in the Phase I Environmental Site Assessment (ESA) Report prepared by AKRF for the NYCSCA, dated June 20, 2017, have affected the suitability of the Site for use as a public school facility. Soil, groundwater, and soil vapor were sampled as part of the Phase II ESI to accomplish these objectives.

1.2 Recognized Environmental Conditions (RECs), Vapor Encroachment Conditions (VECs), and Environmental Concerns

AKRF previously prepared a Phase I ESA of the Site. The Phase I ESA Report, dated June 20, 2017, identified several RECs/VECs associated with the Site, which are as follows:

<u>On-Site REC/CREC/VEC:</u>

- Three in-service fuel oil underground storage tanks (USTs) with two closed-status Spill listings and one reported tank-tightness test failure.
- Potential historic material of unknown origin and/or abandoned USTs associated with demolished historic on-site buildings, and/or potential historic fill associated with past nearby highway construction.

<u>Off-Site RECs/CRECs/VECs:</u>

- Potential contamination associated with historic railroad tracks east of the Site.
- A New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) listing west-adjacent to the Site at 77 Chicago Avenue.
- A groundwater monitoring well observed during Site reconnaissance on the Cleveland Place sidewalk between the two Site lots.

The Phase I ESA Report also revealed environmental concerns associated with suspect asbestos-containing materials (ACM), lead-based paint (LBP), and polychlorinated biphenyl (PCB)-containing

materials in the Site structures and/or in buried debris/fill material, a 55-gallon drum with unknown contents near the High School building, and water damage and associated mold growth.

Based on the findings of the Phase I ESA, AKRF recommended performance of a Phase II ESI, consisting of a geophysical survey and the collection and laboratory analysis of soil, sub-slab/soil vapor, and groundwater samples to determine whether the identified RECs and VECs have affected the suitability of the Site for the use as a public school facility. AKRF also recommended that any ACM, LBP, and/or PCB-containing materials be properly maintained in accordance with NYCSCA protocols, and any such materials affected by proposed renovation, demolition, or construction activities at the Site be identified and properly managed during those activities in accordance with all applicable regulations and NYCSCA policies and procedures.

2.0 DESCRIPTION OF PHASE II ESI FIELD ACTIVITIES

Initial Phase II ESI field activities were performed between July 31 and August 22, 2017. The field activities included the following:

- A geophysical survey of accessible areas of the Site;
- Advancement of 19 soil borings and collection and analysis of 38 soil samples;
- Installation of 4 temporary monitoring wells and collection and analysis of 1 groundwater sample; and
- Installation of 17 temporary soil/sub-slab vapor sampling points and collection and analysis of 17 sub-slab/soil vapor samples.

Supplemental Phase II ESI field activities were performed on November 10 and 11, 2017 to further evaluate elevated concentrations of volatile organic compounds (VOCs) detected in the sub-slab vapor samples collected at the elementary school boiler room during the initial sampling, and to further investigate a suspected UST identified near the maintenance garage in the southern portion of the Site by the initial geophysical survey. The supplemental field activities consisted the following:

- A geophysical survey to clear boring locations and confirm the suspected UST location near the garage on the southern portion of the Site;
- Advancement of 5 soil borings (3 at the elementary school boiler room and 2 adjacent to the suspect UST) and collection and analysis of 10 soil samples;
- A soil vapor assessment in the elementary school that included:
  - Inspection and chemical inventory of the elementary school building;
  - Collection and analysis of two (2) co-located indoor air samples and sub-slab vapor samples in the elementary school building and analysis of the sub-slab vapor samples for select VOCs; and
  - Collection and analysis of one (1) ambient air sample at a location adjacent to the elementary school building.

A Site Plan showing the sampling locations, Site features, tax block and lot numbers, and anticipated groundwater flow direction is provided as Figure 2. Sampling locations at the elementary school building are shown on Figure 3. Representative photographs of the Phase II field activities are included in Appendix A.

The initial Phase II and supplemental Phase II ESI activities were conducted in accordance with the AKRF's Phase II ESI Scope of Work (SOW) dated June 20, 2017 and AKRF's Supplemental ESI Proposal/SOW dated September 28, 2017, with the exception of the following:

- The original scope of work specified using sonic drilling methods to install temporary wells across the groundwater table, which is presumed to be greater than 100 feet bgs. However, based on gauging of the existing monitoring well on the Cleveland Place sidewalk (indicating potential groundwater at approximately 30 feet bgs), the proposed depths and installation methods of the temporary wells were changed. However, upon installation, groundwater was not encountered in TW-1, TW-12, and TW-17. A sample was obtained from TW-15 from apparent perched groundwater, and in consultation with NYCSCA, additional attempts at collecting groundwater samples were not made since evidence of soil contamination was not observed.
- Due to insufficient groundwater volume in TW-15, dissolved metals analysis was not performed.

- Soil borings SB-6 through SB-12 were relocated along the actual route of the fill line for the UST adjacent to the Chapel building based on the geophysical survey findings.
- Sub-slab vapor point SV-10 was relocated from inside the convent to immediately outside and north of the convent building to avoid asbestos clearance and sampling in an occupied space.
- Sub-slab vapor point SV-15 was unable to be sampled due to debris and pooling water in the pre-cored hole in the concrete slab.
- The soil sample from soil boring SB-GA1 was collected at 8 to 10 feet below grade, above the anticipated sampling interval of 13 to 15 feet below grade due to the observation of perched groundwater at approximately 10 feet below grade within the soil boring.

2.1 Asbestos Clearance and Geophysical Survey

Airtek Environmental Corp. (Airtek) performed asbestos testing of the proposed boring locations on July 6 and 7, 2017. Based on the results of the pre-probe survey, ACM was not identified at the proposed exterior sampling locations. Confirmed ACM floor tiles and/or suspect ACM waterproofing was identified at all interior locations (SV-6 through SV-18), therefore, the concrete building slabs at these locations were pre-cored by an NYCSCA asbestos abatement contractor on August 18, 21, and 22, 2017 after each location was cleared of utilities during the geophysical survey described below. A copy of the pre-probe survey report is provided in Appendix B.

A geophysical survey was performed on July 12 and 13, 2017 by Delta Geophysics Inc. (Delta) of Catasauqua, Pennsylvania, to attempt to locate potential abandoned USTs or other buried structures, and to verify that the proposed sampling locations were clear of subsurface structures and utilities. Delta returned on August 15, 2017 to clear additional interior locations relocated to avoid coring through Terrazzo flooring for the sub-slab soil vapor sampling. A supplemental geophysical survey was performed on November 10, 2017 by Nova Geophysics Services (Nova) of Douglaston, New York, to verify that the proposed sampling locations were clear of subsurface structures and utilities, confirm the suspected UST location near the maintenance garage on the southern portion of the Site, and to clear interior sampling locations within the elementary school to avoid coring through Terrazzo flooring for the sub-slab soil vapor sampling.

The investigations were conducted in accessible areas of the Site using a Geophysical Survey Systems Inc. SIR cart-mounted Ground Penetrating Radar (GPR) unit with a 400 MHz and 250MHz antenna, a radiodetection RD7000/RD7100 precision utility locator, and a Fisher M-Scope TW-6 pipe and cable locator. GPR profiles were collected and inspected for reflections that could be indicative of USTs, utility lines, or other subsurface structures. Sample locations were established in areas that did not conflict with subsurface structures or utilities. The results are discussed further in Section 4.2. A copy of the geophysical survey reports are attached as Appendix B.

2.2 Sub-Slab/Soil Vapor Sampling

Sub-slab/soil vapor sampling was conducted as part of the Phase II ESI to determine the concentration of volatile organic compounds (VOCs) in soil vapor beneath the Site. Figure 2 shows the approximate locations of the five temporary soil vapor sampling points (SV-1 through SV-5) and 12 temporary sub-slab vapor sampling point (SV-6 through SV-14 and SV-16 through SV-18) installed as a part of this Phase II ESI. SV-15 was not installed due to debris and pooling water in the pre-cored hole in the concrete slab.

The temporary soil vapor sampling points were installed and sampled on August 3, 2017. The temporary sub-slab sampling points were installed and sampled on August 22 and 23, 2017. Sampling was conducted in conformance with the applicable procedures described in ASTM E 2600-08 "Standard Practice for Assessment of Vapor Intrusion into Structures on Property Involved in Real Estate Transactions" and the October 2006 New York State Department of Health (NYSDOH) Soil Vapor Intrusion Guidance Document protocols. Cascade Technical Services LLC of Mineola, New York (Cascade) was retained as a subcontractor for drilling services.

The soil vapor sampling points (SV-1 through SV-5) were installed using a direct-push probe (i.e., Geoprobe®) system to advance a 0.75-inch diameter hollow probe rod fitted with an expendable 6-inch long stainless steel screened implant to a depth of 5 feet below ground surface (bgs). Dedicated tubing with threaded fittings was connected to the probe. The hollow probe rod was then removed and the boring was backfilled with clean silica sand to one foot above the screen. Hydrated bentonite was used to fill the remaining void around the sampling tubing to ground surface. The sub-slab vapor points (SV-6 through SV-14 and SV-16 through SV-18) were installed through an approximately three-inch diameter hole in the slabs of the on-site buildings, which were previously cored by a NYCSCA contractor on August 17 through August 22, 2015. The points were installed by boring to approximately six inches below the bottom of the basement slab, placing an approximately three-inch polyethylene implant with connected tubing into the boring, backfilling the area around the screen with sand, and sealing the remaining void around the sample tubing with hydrated bentonite.

Prior to sampling, each sub-slab/soil vapor point was purged of three sampler volumes using a GilAir Plus personal pump. During purging, an inverted one-gallon bucket was placed over the sampling point and helium gas was introduced through a small hole in the bucket to saturate the atmosphere around the sample port with helium gas. The purged vapors were collected into a Tedlar® bag and monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point and to verify the adequacy of the bentonite seal. Helium concentrations of less than 10 percent were considered sufficient to verify a tight seal. All soil vapor points passed the seal integrity tests. Purged vapors were also field-screened for organic vapors using a photoionization detector (PID) calibrated with 100 parts per million (ppm) isobutylene and fresh air. PID readings between 3.6 and 333 ppm were detected in the soil/soil-vapor points with the maximum reading detected at SV-7 located in the high school building.

After purging, each probe was connected via Teflon™ tubing to a laboratory-supplied 6-liter SUMMA® canister equipped with a 0.1 liter per minute (L/min) flow regulator. Soil vapor samples were collected in individually-certified clean SUMMA® canisters for an approximately one-hour sampling period. The 17 samples collected during the initial Phase II ESI activities (SV-1 through SV-14, and SV-16 through SV-18) were submitted for the NYCSCA's list of 26 VOCs associated with management of petroleum and dry cleaning solvents by United States Environmental Protection Agency (USEPA) Method TO-15, as summarized in the following table:

Summary of VOCs Analyzed for in Soil Vapor Samples

Chloromethane	1,2-Dichloroethane	Ethylbenzene
Vinyl Chloride	1,1,1-Trichloroethane	*m,p*-Xylenes
Chloroethane	Benzene	o-Xylene
1,1-Dichloroethene	Carbon Tetrachloride	1,3,5-Trimethylbenzene
Methylene chloride	1,2-Dichloropropane	1,2,4-Trimethylbenzene
trans-1,2-Dichloroethene	Trichloroethene	1,3-Dichlorobenzene
1,1-Dichloroethane	Toluene	1,2-Dichlorobenzene
Methyl tert-Butyl Ether	Tetrachloroethene	Naphthalene
cis-1,2-Dichloroethene	Chlorobenzene	

The SUMMA® canisters were properly labeled and delivered by courier to TestAmerica of Burlington, Vermont, a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified analytical laboratory. Standard chain-of-custody (COC) procedures were followed.

Sub-slab and soil vapor sampling logs are provided in Appendix C. Summaries of the soil vapor sample analytical results are provided in Table 1, and copies of the analytical laboratory reports are attached in Appendix D.

2.3 Soil Investigation

Soil samples were collected to assess the current environmental conditions and to characterize subsurface soil at the Site. Figure 2 shows the locations of the 24 soil borings (SB-1 through SB-19, SB-ES1- through SB-ES3, SB-GA1 and SB-GA2) advanced as part of the initial and supplemental Phase II ESI. The initial subsurface soil sampling program was performed between July 31 and August 3, 2017. The supplemental subsurface soil sampling program was performed on November 11, 2017. Cascade was retained as a subcontractor for drilling services.

A track-mounted Geoprobe® drill rig was used to advance the soil borings and retrieve soil samples to depths ranging from approximately 10 to 30 feet bgs within soil borings SB-1 through SB-17, SB-ES2, SB-ES3, SB-GA1, and SB-GA2. Soil borings SB-18 and SB-19 were advanced to a depth of approximately 5 feet using a slide hammer. Soil boring SB-ES1 was advanced to a depth of approximately 10 feet using a hand auger and slide hammer. Soil samples were collected and screened for field evidence of contamination continuously from the ground surface to the boring completion depth in 5-foot long, 2-inch diameter macrocore samplers lined with acetate sleeves. A description of the soil retained in each Geoprobe® sample core was logged by AKRF's on-site environmental scientist, and the soil was screened in the field for VOCs with a PID calibrated at the start of each work day with 100 ppm isobutylene and fresh air. Soil boring logs, including the PID responses for each sample, are provided in Appendix C. A description of each boring location is presented in the following table:

Summary of Soil Boring Locations and Rationale

Soil Boring	Location	Rationale
SB-1,-2	Parking lot on Block 3089, Lot 59	• General fill conditions
SB-3,-4,-5	North, east, and south of the in-service 2,000-gallon UST at the elementary school	• General fill conditions • Potential contamination from fuel oil UST

Soil Boring	Location	Rationale
SB-6,-7,-8,-9	Adjacent to fill port and along fill line for in the in-service 6,000-gallon UST at the Chapel building	• General fill conditions • Potential contamination from UST fill line
SB-10, -11, -12	West of in-service 6,000-gallon UST at the Chapel building	• General fill conditions • Potential contamination from fuel oil UST
SB-13	Adjacent to 275-gallon AST at the Child Development Center-UPK	• General fill conditions • Potential contamination from fuel oil AST
SB-14,-15	West and south of in-service 2,000-gallon UST at Annex/ Garage	• General fill conditions • Potential contamination from fuel oil UST
SB-16	South of Garage	• General fill conditions • Potential contamination from garage maintenance activities
SB-17	Southern Property Boundary, near Knauth Place	• General fill conditions • Presumed downgradient conditions
SB-18,-19	Wooded area in northeastern portion of the Site	• General fill conditions • Potential filling from highway construction
SB-ES1	In the elementary school boiler room	• Investigate potential source of PCE/TCE in sub-slab soil vapor sample SV-11
SB-ES2	Outside, north of the elementary school boiler room	• Investigate potential source of PCE/TCE in sub-slab soil vapor sample SV-11
SB-ES3	Outside, east of the elementary school boiler room	• Investigate potential source of PCE/TCE in sub-slab soil vapor sample SV-11
SB-GA1	West-adjacent to suspect UST identified south of the garage	• Potential contamination associated with the suspect UST
SB-GA2	East-adjacent to suspect UST identified south of the garage	• Potential contamination associated with the suspect UST

Stained soil and a mild petroleum-like odor but no elevated PID readings were observed between 2 to 3 feet bgs in SB-7. No evidence of obvious contamination [e.g., elevated PID readings, odors, staining, etc.] was observed in the remaining soil borings advanced during the investigations; however, apparent fill material was observed in each of the soil borings from the ground surface to maximum depths ranging from approximately 5 to 20 feet bgs. In general, one soil sample was collected for laboratory analysis from within the fill layer (0-2 or 1-3 feet bgs) and a second sample was collected from approximately 10-12 feet bgs for borings near USTs, and between 5-7 feet bgs for borings near the fill lines. Care was taken to avoid including asphalt or asphaltic sub-base materials in the samples collected for laboratory analysis.

Soil samples collected during the initial Phase II ESI activities were submitted for laboratory analysis and were analyzed for combined Target Compound List (TCL) and Commissioner's Policy (CP)-51 list VOCs plus Tentatively Identified Compounds (TICs) by USEPA Method 8260, TCL and CP-51 listed semivolatile organic compounds (SVOCs) plus TICs by USEPA Method 8270, pesticides by USEPA Method 8081, herbicides by USEPA Method 8152, PCBs by USEPA Method 8082, select Target Analyte List (TAL) metals by USEPA Method 6000/7000 series (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, manganese, mercury, nickel, selenium, silver, thallium, vanadium, and zinc), cyanide by USEPA Method 9012, and hexavalent chromium by USEPA Method 7196. For waste characterization purposes, five composite samples collected from within the historic fill layer at the Site

were analyzed additionally for diesel and gasoline range organics (DRO and GRO) total petroleum hydrocarbons (TPH) by USEPA Method 8015-modified, hexavalent chromium, and cyanide. Samples analyzed for VOCs were collected using EnCore® field samplers.

Soil samples collected in/near the elementary school boiler room during the supplemental Phase II ESI activities were submitted for laboratory analysis and were analyzed for combined TCL and CP-51 list VOCs plus TICs by USEPA Method 8260. Soil samples collected from soil borings advanced adjacent to the suspect UST were analyzed for TCL and CP-51 list VOCs plus TICs by USEPA Method 8260, SVOCs plus TICs by USEPA Method 8270, pesticides by USEPA Method 8081, herbicides by USEPA Method 8152, and PCBs by USEPA Method 8082. Samples analyzed for VOCs were collected using EnCore® field samplers. A summary of the soil sampling program is presented in the following table:

Summary of PID Screening and Soil Sample Analytical Plan

Sample ID/ Soil Boring Number	Boring Depth* (feet bgs)	Sample Depth Interval Selected for Analysis* (ft bgs)	Max PID Reading (PPM)	TCL/CP-51 VOCs plus TICS	TCL/CP-51 SVOCs plus TICS	PCBs, Pesticides, Herbicides	Select TAL Metals	Cyanide	Hexavalent Chromium	DRO and GRO TPH
SB-1	20	1-3	ND	X	X	X	X			
		0-7	ND					X	X	X
		10-12	ND	X	X	X	X			
SB-2	20	1-3	ND	X	X	X	X			
		10-12	ND	X	X	X	X			
SB-3	20	1-3	ND	X	X	X	X			
		10-12	ND	X	X	X	X

		8-10	ND	X	X	X				
SB-GA2	20	0-2	ND	X	X	X				
		13-15	ND	X	X	X				

Notes:
ND = Not Detected
X = Sample analysis performed
PPM = Parts per million
TICS = Tentatively Identified Compounds

The samples were collected and containerized in accordance with NYSDEC and USEPA protocols. Each container was properly labeled, preserved, and placed in an ice-filled cooler for transport via courier to TestAmerica of Edison, New Jersey, a NYSDOH ELAP-certified analytical laboratory. Standard COC procedures were followed. Summaries of the analytical results for the soil samples are provided in Tables 2 through 7, and copies of the analytical laboratory reports are attached in Appendix D.

2.4 Groundwater Investigation

Temporary wells were installed at four locations as part of the Phase II ESI to assess the current environmental condition of groundwater beneath the Site. Four temporary wells (TW1, TW-12, TW-15, and TW-17) were installed at the locations shown on Figure 2; however, groundwater sampling was completed at only one of the wells (TW-15) as described below. The groundwater sample was completed on August 1, 2017. Cascade was retained by AKRF as a subcontractor for drilling services.

The temporary wells were installed using a Geoprobe® rig. After encountering wet soil indicative of groundwater at approximately 25 feet bgs in soil borings SB-1, SB-12, SB-15, and SB-17, a temporary well was installed using 1-inch diameter, 10-foot long PVC well screen set approximately 5 feet below the apparent water table. However, after installation, TW-1, TW-12, and TW-17 were gauged and found to be dry, therefore, no samples were collected at these locations. Following installation of TW-15, a Solinst peristaltic pump was used to purge approximately three well volumes from the well, and the purged water was monitored for temperature, pH, turbidity, dissolved oxygen, oxidation reduction potential (ORP), and conductivity using a water quality meter using a Horiba U52-2 Water Quality Meter. Measurements were recorded every five minutes, and purging continued until water quality indicators stabilized. After the wells were gauged and found to be dry or sampled, the temporary wells were removed from the ground and the borings were backfilled with drill cuttings and sand.

The groundwater sample was analyzed for combined TCL and CP-51 listed VOCs and SVOCs by USEPA Methods 8260 and 8270, respectively, and select TAL metals by USEPA Method 6000/7000 series (unfiltered analysis only). One aqueous trip blank accompanied the sample shipment and was analyzed for TCL/CP-51 listed VOCs.

The sample was collected and containerized in accordance with NYSDEC/USEPA protocols. Each container was properly labeled, preserved, and placed in a cooler for transport via courier to TestAmerica of Edison, New Jersey a NYSDOH ELAP-certified analytical laboratory. Standard chain of custody (COC) procedures were followed. Summaries of the analytical results for the groundwater sample are provided in Tables 8 through 10, and copies of the analytical laboratory reports are attached in Appendix D.

2.5 Soil Vapor Assessment

VI sampling was conducted in general accordance with applicable procedures described in NYSDOH's *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006 (NYSDOH, 2006). The VI sampling locations are shown on Figure 3. The field activities and methods are described further in the following sections.

2.5.1 Building Inspection and Chemical Inventory

On November 10, 2017, AKRF completed a pre-sampling inspection to gather information on the elementary school building characteristics, building occupancy, air flow patterns, utilities, building operations, chemical and maintenance product inventory, equipment, and other known factors that may affect indoor air quality in the areas to be sampled.

During the inspection, a ppbRAE™ PID capable of detecting VOCs in the parts per billion (ppb) range was used to field-screen the indoor air for the presence of organic vapors. Low PID readings ranging from 170 to 234 parts per billion (ppb) were noted throughout the elementary school building during the pre-sampling inspection. Relevant sections of a NYSDOH Indoor Air Quality Questionnaire and Building Inventory form were completed to document the results of the inspection. A copy of the form is included in Appendix E.

2.5.2 Indoor and Ambient Air Sampling

The indoor air sampling was performed on November 11, 2017 in conformance with the applicable procedures described in the NYSDOH Vapor Intrusion Guidance Document. Two (2) indoor air samples (IA-ES1 and IA-ES2) were collected for laboratory analysis of VOCs. Specifically, IA-ES1 was collected from the boiler room located within the partial sub-basement in the northern portion of the elementary school building and IA-ES2 was collected from the basement-level auditorium in the western portion of the building. In addition, an ambient air sample (AA-1) was collected from sidewalk area

south-adjacent to the building. The indoor and ambient air sampling locations are shown on Figure 3. Copies of the indoor/ambient air sampling logs are provided in Appendix C.

During the sampling event, the building's ventilation system was operating under normal conditions. During sampling, there were no known activities being performed in the building that would interfere with the sampling.

The one (1) ambient air and two (2) indoor air samples were collected using individually certified-clean 6-liter Summa® canisters. The air samples were collected over an approximately eight-hour sampling period. The indoor air samples were collected at a height of approximately three to five feet above the floor to simulate the breathing zone. Immediately after opening each Summa® canister, the initial vacuum (inches of mercury) was noted at all the locations. After approximately eight hours, final vacuum readings (inches of mercury) were noted and the Summa® canisters were closed. Initial and final vacuum readings are summarized in the following table:

Summary of Indoor and Ambient Air Sampling Field Data

Sample ID	Vacuum at the Start (In Hg)	Vacuum after sampling completion (In Hg)
IA-ES1	-30.0	-8.50
IA-ES2	-30.0	-5.50
AA-1	-30.0	-5.0

Note:
Vacuum readings recorded from analog gauges in the field. See the laboratory report for final vacuum readings measured during laboratory check-in.

The indoor air samples were submitted to the laboratory on-hold pending results of the sub-slab soil vapor samples. The ambient air sample was submitted for EPA Method TO-15 for PCE, TCE, and their associated breakdown products, as listed in the following table:

Summary of VOCs Analyzed for in Ambient Air Sample

Compound	Rationale for Including in Parameter Suite
Tetrachloroethene (PCE)	Dry cleaning solvent. Degrades to TCE. Detected in SV-11 at above the NYSDOH AGV.
Trichloroethene (TCE)	Solvent; breakdown product of PCE. Detected in SV-11 at above the NYSDOH AGV.
1,1-Dichloroethene	Breakdown product of PCE and TCE
cis-1,2-Dichloroethene	Breakdown product of PCE and TCE
trans-1,2-Dichloroethene	Breakdown product of PCE and TCE
Vinyl chloride	Breakdown product of PCE, TCE, cis-DCE, trans-DCE and 1,1-DCE, used in PVC

The air samples were collected for approximately eight (8) hours, to obtain a sufficient sample volume to utilize the USEPA Method TO-15 with a detection limit of approximately 1.0 microgram per cubic meter ($\mu g/m^3$). The analyses were conducted to achieve a detection limit of 0.2 $\mu g/m^3$ for TCE, cis-1,2-dichlorethene, and 1,1-dichloroethene, and 1 $\mu g/m^3$ for all other compounds. The Summa® canisters were properly labeled and shipped to TestAmerica for analysis. A copy of the analytical laboratory results is attached in Appendix D.

2.5.3 Sub-Slab Vapor Sampling

The sub-slab vapor sampling was performed on November 11, 2017, concurrently with the indoor air sampling. Two (2) sub-slab vapor samples (SV-ES1 and SV-ES2) were collected from vapor monitoring points located adjacent to indoor air samples IA-ES1 and IA-ES2, respectively. The vapor monitoring points were installed, purged and seal-tested using the same methods described in Section 2.2. After purging, each probe was connected via Teflon™-lined tubing to a laboratory-supplied, individually-certified, 6-liter Summa® canister equipped with a flow regulator to allow sample collection over an eight-hour period.

Immediately after opening each Summa® canister, the initial vacuum (inches of mercury) was noted at all the locations. After approximately eight hours, final vacuum readings (inches of mercury) were noted and the Summa® canisters were closed. Vacuum readings are summarized in the following table:

Summary of Sub-Slab Vapor Sampling Field Data

Sample ID	Vacuum at the Start (In Hg)	Vacuum after sampling completion (In Hg)
SV-ES1	-30.0	-15.00
SV-ES2	-30.0	-5.5

Note:
Vacuum readings recorded from analog gauges in the field. See the laboratory report for final vacuum readings measured during laboratory check-in.

The sub-slab vapor samples were analyzed using USEPA Method TO-15 for the same list of VOCs as the ambient sample. The Summa® canisters were properly labeled and shipped to TestAmerica for analysis. A copy of the analytical laboratory results is attached in Appendix D.

3.0 SITE DESCRIPTION AND PHYSICAL CHARACTERISTICS

The Site consists of an approximately 7.2-acre property containing 8 buildings associated with a parochial school constructed between approximately 1891 and 2005, including: a 3-story elementary school with a partial cellar; a 2-story convent with a cellar; a 4-story chapel with a cellar, a 2- to 3-story high school; a 1- to 2-story gymnasium; a 2-story annex; a 1-story child development center; and a 1-story garage. The Site also contains an asphalt-paved parking lot (on Block 3089, Lot 59), additional parking areas and driveways, concrete-paved pathways, landscaped areas, a wooded area, and a swimming pool with a pool shed.

3.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle Maps, *The Narrows, NY – NJ,* dated 2013, the elevation of the Site ranges from approximately 100 to 140 feet above the North American Vertical Datum of 1988 (an approximation of mean sea level), sloping down radially from a high point in the center of the Site toward the surrounding roadways. The nearest surface water bodies are Grasmere Lake, approximately 3,000 feet to the west, and the Lower Bay of New York Bay, approximately 3,000 feet southeast and 4,500 feet east of the Site.

3.2 Geology

According to the *USGS Geologic and Geohydrologic Reconnaissance of Staten Island, New York* (1988), the Site is underlain by Pleistocene glacial deposits consisting primarily of clay and sand with some boulders. These deposits are underlain by the Cretaceous clay member of the Raritan formation approximately 200 to 250 feet below ground surface (bgs). The Raritan formation is in turn underlain by Staten Island Serpentine crystalline bedrock at approximately 250 to 300 feet bgs.

Soil borings were advanced to a maximum depth of 30 feet bgs, with samples selected for laboratory analysis at a maximum depth of 12 feet bgs during the Phase II ESI field program. Historic fill (sand, gravel, and silt, with varying amounts of brick, wood, asphalt, and organic material) was encountered within the borings from the ground surface to maximum depths ranging from 5 to 20 feet bgs. Some of the fill (black and dark gray sand and silt containing wood) appeared to be re-worked native material. Apparent native sand, gravel, silt, and clay were encountered in some of the borings below the historic fill layer.

3.3 Hydrology

Groundwater was measured at 26.5 feet bgs in temporary well TW-15 installed during the initial Phase II ESI activities. Saturated soil was observed from 10 to 20 feet bgs in soil boring SB-GA1, advanced during the supplemental Phase II ESI activities. However, based on observations in soil borings across the Site and USGS data on regional hydrology, which indicates groundwater in the Site vicinity is likely 90 to 130 feet bgs, this is not expected to be actual groundwater, and instead a perched layer on low permeable material. Based on surface topography, groundwater is anticipated to flow in a south-southeasterly direction toward the Lower Bay, located approximately 3,000 feet southeast of the Site. There are no surface water bodies or streams on or immediately adjacent to the Site.

4.0 DISCUSSION OF FINDINGS

This section presents a discussion of the findings of the Phase II ESI. A summary of the laboratory results is presented in Tables 1 to 10. The definitions of all data qualifiers/acronyms contained in the tables are provided on the last page of the tables section of the report. The sample collection logs and the complete laboratory analytical data packages are included in Appendices C and D, respectively.

4.1 Applicable Regulatory Standards

This subsection identifies the USEPA, NYSDEC, NYSDOH, and/or NYCDEP regulatory standards and guidelines used to evaluate the results of the soil vapor, subsurface soil, and groundwater sampling. The standards and guidelines used to evaluate the specific data are described individually below.

4.1.1 Indoor Air and Sub-Slab Soil Vapor Guidelines

Analytical results for VOCs in the indoor air, sub-slab soil vapor, and soil vapor samples were compared to the NYSDOH Air Guideline Values (AGVs) and to background levels of VOCs in indoor air presented in Appendix C of the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 "NYSDOH Vapor Intrusion Guidance Document", including:

- Upper Fence Limit indoor air values from "Table C-1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes";
- 90th Percentile indoor air values from "Table C-2. EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method"; and
- The 95th Percentile Indoor Air Values from Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air".

PCE levels were compared to the AGV presented in the NYSDOH Fact Sheet on Tetrachloroethene in Indoor and Outdoor Air, dated September 2013. TCE levels were compared to the AGV presented in the NYSDOH Fact Sheet on Trichloroethene in Indoor and Outdoor Air, dated August 2015. The sub-slab vapor results were also compared to the Soil Vapor Decision Matrices in the NYSDOH Vapor Intrusion Guidance Document (May 2017 updated matrices at https://www.health.ny.gov/environmental/indoors/vapor_intrusion/update.htm).

4.1.1 Ambient Air Sampling Guidelines

Analytical results for VOCs in the ambient air sample were compared to the NYSDOH AGVs and to background levels of VOCs in outdoor air presented in Appendix C of the NYSDOH Vapor Intrusion Guidance Document, including: Upper Fence Limit outdoor air values from "Table C-1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes," 90th Percentile outdoor air values from "Table C-2. EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method," and the 95th Percentile Outdoor Air Values from "Table C-5. HEI 2005: Relationship of Indoor, Outdoor and Personal Air." PCE levels were compared to the AGV presented in the NYSDOH Fact Sheet on Tetrachloroethene in Indoor and Outdoor Air, dated September 2013.

4.1.2 Soil Cleanup Objectives (SCOs)

The Unrestricted Use Soil Cleanup Objectives (UUSCOs) found in 6 NYCRR 375-6, Remedial Program SCOs, are the appropriate standards for use in evaluating the results of the analyses of the Phase II ESI soil samples. Soil that is free of contaminants above these standards is suitable for "unrestricted use", which is the land use category without imposed restrictions such as environmental easements or other land use controls. Soil analytical results were also compared to the lower of the Supplemental Soil

Cleanup Objectives (SSCOs) for Protection of Groundwater or Ecological Resources established by NYSDEC Commissioners Policy (CP)-51 – Soil Cleanup Guidance, dated October 21, 2010.

4.1.3 Groundwater Quality Standards and Guidance Values

Analytical results for groundwater were compared to New York State Class GA groundwater standards and guidance values, provided in the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1, "Ambient Water Quality Standards (AWQSs) and Guidance Values." AWQSs are enforceable regulatory limits. Where AWQSs do not exist, ambient water quality guidance values were used to evaluate the groundwater results.

4.2 Geophysical Survey Findings

During the July 12 and 13, 2017 geophysical survey, the proposed boring locations were identified within the survey area. When possible, an area of approximately 10 feet by 10 feet around each boring location was investigated with the GPR to clear for utilities. All designated anomalies were marked on-site with spray paint. Linear anomalies indicative of storm sewer, electrical, vent lines, fill lines, product lines, gas, and water lines were identified across the Site.

Four metallic anomalies and the three known USTs were identified in the survey. The four metallic anomalies identified included the following:

- A cylindrical anomaly measuring approximately 7 feet by 5 feet located approximately 10 feet east of the garage. The anomaly was located next to a steel plate, which is reportedly associated with the water main connection for the campus. Therefore, the anomaly is likely related to utilities and is not a UST.
- A cylindrical anomaly measuring approximately 9 feet by 5 feet located approximately 30 feet south of the garage. This anomaly is considered a potential UST.
- A cylindrical anomaly measuring approximately 6 feet by 4 feet located at the base of the stairs near the chapel building. Based on tracing a nearby drain, it was confirmed that this anomaly is associated with on-site stormwater.
- A flat metal feature approximately 5 feet by 5 feet wide approximately 2 to 3 feet bgs was observed near Cleveland Place.

During the November 10, 2017 geophysical survey, the proposed supplemental boring locations were identified within the survey area. When possible, an area of approximately 10 feet by 10 feet around each boring location was investigated with the GPR to clear for utilities. All designated anomalies were marked on-site with spray paint. Linear anomalies indicative of storm sewer, electrical, vent lines, fill lines, product lines, gas, and water lines were identified within the surveyed areas.

The metallic anomaly originally discovered during the geophysical survey performed during the initial Phase II ESI activities south of the garage was verified.

The locations of the known USTs and the metallic anomalies identified by the geophysical survey are shown on Figure 2. The geophysical reports are provided in Appendix B.

4.3 Sub-Slab/Soil Vapor Sampling Findings

Laboratory quality assurance/quality control (QA/QC) procedures and analyses were used to demonstrate whether sub-slab/soil vapor analytical results have been biased either by interfering compounds in the sample matrix or by laboratory techniques that may have introduced systematic or random errors to the analytical process. The sub-slab/soil vapor sample analytical data was determined to be representative and

of acceptable quality for the purposes of this investigation. The complete analytical data report for soil vapor is presented in Appendix D.

4.3.1 Volatile Organic Compounds (VOCs) in Sub-Slab/Soil Vapor

Soil Vapor

A review of the soil vapor sample analytical results indicates that 18 of the 26 VOCs analyzed for utilizing USEPA Method TO-15 were detected in one or more of the soil vapor samples. Six VOCs were detected at concentrations greater than the background ranges, as summarized in the following table:

Detected VOC Concentrations Greater than Background Ranges in Soil Vapor

AKRF Sample ID Date Sampled Units = µg/m^3	NYSDOH AGV	NYSDOH Background Range	SV-1 8/3/17	SV-3 8/3/17	SV-4 8/4/17
1,2,4-Trimethylbenzene	***NS***	***9.5 - 9.8***	0.96	0.62 J	**54**
1,2-Dichloroethane	***NS***	***0.4-0.9***	0.14 U	**1.2**	0.14 U
1,3,5-Trimethylbenzene	***NS***	***3.7 - 3.9***	0.33 J	0.43 J	**29**

m,p-Xylene	***NS***	***11-22.2***	1.4 J	1.5 J	**29**
o-Xylene	***NS***	***7.1-7.9***	0.54 J	0.59 J	**13**

Notes:
µg/m^3 = micrograms per cubic meter
NS = A standard has not been established for the analyte.
U = The analyte was not detected above laboratory detection limits.
J = Estimated value.
Exceedances of NYSDOH Background Ranges are highlighted in **bold** font.

No VOCs were detected in the soil vapor samples above the NYSDOH AGVs.

Sub-Slab Vapor

A review of the sub-slab soil vapor sample analytical results indicates that 20 of the 26 VOCs analyzed for utilizing USEPA Method TO-15 were detected in one or more of the sub-slab soil vapor samples. Eight VOCs were detected at concentrations greater than the background ranges and/or AGVs, as summarized in the following table:

Detected VOC Concentrations Greater than AGVs or Background Ranges in Sub-Slab Soil Vapor

AKRF Sample ID Date Sampled Units = µg/m^3	NYSDOH AGV	NYSDOH Background Range	SV-9 08/22/17	SV-11 08/22/17	SV-14 08/22/17	SV-16 08/22/17	SV-17 8/23/17
1,1-Dichloroethane	***NS***	***0.4-<0.7***	2.1 U	0.35 J	0.069 U	**11 J**	**4.2 J**

Notes:
µg/m^3 = micrograms per cubic meter
NS = A standard has not been established for the analyte.

U = The analyte was not detected above laboratory detection limits.
J = Estimated value.
Exceedances of NYSDOH Background Ranges are highlighted in **bold** font.
Exceedances of NYSDOH AGVs are shaded in gray.

Discussion

The NYSDOH has established AGVs for three of the VOCs analyzed [methylene chloride, tetrachloroethene (PCE), and trichloroethene (TCE)]. Methylene chloride was not detected above its AGV in the sub-slab soil vapor samples. PCE and TCE were detected above their respective AGVs in sample SV-11 collected in the elementary school building. PCE was detected at a concentration of 72 $\mu g/m^3$, above it AGV of 30 $\mu g/m^3$, and TCE was detected at a concentration of 28 $\mu g/m^3$, above its AGV of 2 $\mu g/m^3$.

The sub-slab vapor sampling results for TCE and cis-1,2-dichloroethene in SV-11 were compared to Matrix A of the NYSDOH Vapor Intrusion Guidance Document. Based on Matrix A, the recommendations for the concentrations detected in SV-11 (51 $\mu g/m^3$ for cis-1,2-dichloroethene and 28 $\mu g/m^3$ for TCE) range from "no further action" to "mitigate" depending on the corresponding indoor air concentrations. The sub-slab vapor sampling results for PCE in SV-11 were compared to Matrix B of the NYSDOH Vapor Intrusion Guidance Document. Based on Matrix B, the recommendations for the concentration of PCE detected in SV-11 (72 $\mu g/m^3$) range from "no further action" to "identify sources and resample or mitigate" depending on the corresponding indoor air concentrations.

The petroleum-related compounds (trimethylbenzenes, benzene, ethylbenzene, and xylenes) identified above their background concentrations in soil vapor and sub-slab vapor are likely associated with historic/current fuel oil storage located at the Site, and not to an on-site release or spill. The chlorinated VOCs (TCE, PCE, 1,1-dichloroethane, cis-1,2-dichloroethane, and dichlorobenzene) identified in soil vapor above their background concentrations may be attributed to former surrounding uses, and are not likely to be associated with an on-site release, based on the Site's history and review of the laboratory results for on-site soil samples collected as part of the investigation. Samples SV-6, SV-7, SV-9, SV-10, SV-16, SV-17, and SV-18 were analyzed at high dilutions, with non-target compounds cyclohexane, heptane, and acetone causing high dilution and high method detection limits in these samples. Analytical results for VOCs in sub-slab/soil vapor are summarized in **Table 1**.

4.4 Soil Sampling Findings

Laboratory QA/QC procedures and analyses were used to demonstrate whether soil analytical results have been biased by either interfering compounds in the sample matrix or by laboratory techniques that may have introduced systematic or random errors to the analytical process. All soil sample data was determined to be representative and of acceptable quality for the purposes of this investigation. The laboratory reporting limits for some SVOCs and pesticides exceeded the corresponding UUSCOs; however, all method detection limits (MDLs) were below the comparison criteria and any detections above the MDLs were reported with a "J" qualifier. The complete soil analytical data reports are presented in Appendix D.

4.4.1 Volatile Organic Compounds (VOCs) in Soil

A review of the subsurface soil sampling analytical results indicates that four VOCs (2-butanone, acetone, methylene chloride, m-&p- xylene) were detected in at least one of the 38 soil samples collected during the initial Phase II ESI, and 10 VOCs (1,1,2-trichloror-1,2,2-trifluroethane, 1,2,4-trimethylbenzene, ethylbenzene, methylcyclohexane, methylene chloride, PCE, TCE, toluene, m-&p- xylene, o-xylene). No compounds were detected above their respective UUSCOs.

Acetone, 2-butanone, and methylene chloride are common laboratory contaminants, and the methylene chloride detections were all qualified with a B flag, indicating that it was also detected in the associated method blanks. ; The 1,2-trichloror-1,2,2-trifluroethane, 1,2,4-trimethylbenzene, ethylbenzene, methylcyclohexane, TCE, toluene, m-&p- xylene, o-xylene in samples collected during the supplemental work were also qualified with B flags, and the laboratory narrative for these samples indicated that the detections were the result of cross-contamination by samples from an unrelated project. Therefore, most of the VOC detections in the soil samples are related to laboratory contamination, and are not reflective of actual soil conditions at the Site. Analytical results for VOCs in soil are summarized in **Table 3**.

4.4.2 Semivolatile Organic Compounds (SVOCs) in Soil

A review of the subsurface soil sampling analytical results indicates that 25 SVOCs were detected in 1 or more of the samples analyzed. Eight SVOCs were detected at concentrations exceeding their respective UUSCOs or SSCOs, as summarized in the following table:

Detected SVOCs Greater Than UUSCOs and/or SSCOs in Soil

Sample Location Sample Date Depth (ft-bgs) Units = mg/kg	NYSDEC UUSCO	CP-51 SSCO	SB-4 7/31/2017 10-12	SB-15 8/1/2017 1-3	SB-17 8/1/2017 1-3	SB-18 8/2/17 0-2	SB-19 8/2/17 3-5	SB-GA1(0-2) 11/11/2017 0-2
Benzo(a)anthracene	***1***	***1***	0.037	**2.5**	0.036 U	0.24	0.64	0.037 U
Benzo(a)pyrene	***1***	***1***	0.04	**1.8**	0.03 J	0.19	0.72	0.037 U
Benzo(b)fluoranthene	***1***	***1***	0.07	**3.1**	0.048	0.34	**1.2**	0.037 U
Benzo(k)fluoranthene	***0.8***	***0.8***	0.036 U	**1.1**	0.036 U	0.17	0.47	0.037 U
Chrysene	***1***	***1***	0.05 J	**2.2**	0.042 J	0.33 J	0.75	0.37 U
Di-n-butyl phthalate	***NS***	***0.014***	0.015 J	0.037 U	0.036 U	0.026 J	0.38 U	0.019 J
Indeno(1,2,3-cd)pyrene	***0.5***	***0.5***	0.032 J	**1.4**	0.066	0.22	0.49	0.037 U
Isophorone	***NS***	***4.4***	0.052 J	0.015 U	4.5	0.15 U	0.15 U	0.15 U

Notes:
mg/kg = milligrams per kilogram
NS = A standard has not been established for the analyte.
U = The analyte was not detected above laboratory detection limits.
J = Estimated value.
Exceedances of Unrestricted Use Soil Cleanup Objectives (UUSCOs) are in **bold** font.
Exceedances of CP-51 Soil Cleanup Objectives are shaded in gray.

The SVOCs detected above their respective Part 375 Unrestricted Use SCOs consist primarily of polycyclic aromatic hydrocarbons (PAHs), a class of compounds present in petroleum products, asphalt, and as byproducts of combustion that are often found in historic fill materials. Since the samples collected at the Site did not exhibit field evidence of contamination (e.g., staining, odors, elevated PID readings), the detected PAHs are not indicative of a petroleum spill or other release, and are likely related to the historic fill material noted in these borings. Isophorone (a common component in concrete and water sealant) is likely associated with historic fill, and di-n-butyl phthalate (a plasticizer) is potentially associated with laboratory contamination. Analytical results for SVOCs in soil are summarized in **Table 3**.

4.4.3 Polychlorinated Biphenyls (PCBs) in Soil

A review of the analytical results indicates that one PCB mixture (Aroclor 1260), was detected in soil sample SB-GA1 (0-2) at a concentration well below the UUSCO for total PCBs. No PCBs were detected in any of the other soil samples. Analytical results for PCBs in soil are summarized in **Table 4**.

4.4.4 Pesticides and Herbicides in Soil

A review of the analytical results indicates that no herbicides and four pesticides (4,4-DDT, 4,4-DDE, chlordane, heptachlor epoxide) were detected in the soil samples. Of these, 4,4-DDT, and 4,4-DDE were detected in one or more samples at concentrations above their UUSCOs, as summarized in the following table:

Detected Pesticides Greater Than UUSCOs in Soil

Sample Location Date Sampled Depth (ft-bgs) Units = mg/kg	NYSDEC UUSCO	SB-12 08/02/17 1-3	SB-18 08/02/17 0-2	SB-19 08/02/17 0-2
4,4-DDE	***0.0033***	0.0074 U	**0.006 J**	**0.007 J**
4,4-DDT	***0.0033***	**0.024**	**0.007 J**	0.0075 U

Notes:
mg/kg = milligrams per kilogram
J = Estimated quantity
U = Not detected
Exceedances of Unrestricted Use Soil Cleanup Objectives (UUSCOs) are in **bold** font.

The detected pesticides are likely attributable to historic fill material which was observed in each of the soil borings advanced during the investigation, and/or historic pesticide use. Analytical results for pesticides and herbicides in soil are summarized in **Table 5**.

4.4.1 Herbicides in Soil

A review of the analytical results indicates that herbicides were not detected in the soil samples. Analytical results for herbicides in soil are summarized in **Table 5**.

4.4.2 Metals in Soil

A review of the subsurface soil sampling analytical results indicates that 14 of the 18 metals analyzed for were detected in 1 or more of the samples. Six metals (arsenic, copper, lead, mercury, nickel, and zinc) were detected at concentrations exceeding their respective UUSCOs in one or more of the samples and one metal (vanadium) was detected at concentrations exceeding their respective SSCOs in one or more of the samples. The exceedances are summarized in the following table:

Detected Metals Greater Than UUSCOs or SSCOs in Soil

Sample Location Sample Date Depth (ft-bgs) Units = mg/kg	NYSDEC UUSCO	CP-51 SSCO	SB-1 08/01/17 1-3	SB-1 08/01/17 10-12	SB-2 07/31/17 1-3	SB-2 07/31/17 10-12	SB-3 07/31/17 1-3	SB-3 07/31/17 10-12	SB-4 07/31/17 1-3

Notes:
mg/kg = milligrams per kilogram
J = Estimated value.
U = Not detected
NS = A standard has not been established for the analyte.
Exceedances of Unrestricted Use Soil Cleanup Objectives (UUSCOs) are in **bold** font.
Exceedances of CP-51 Soil Cleanup Objectives are shaded in gray.

In accordance with NYCSCA protocols, AKRF requested that the laboratory additionally analyze samples with total lead of 100 ppm or greater (SB-11(1-3), SB-16(1-3) and SB-19(3-5)) for leachable lead using the Toxicity Characteristic Leaching Procedure (TCLP) to determine whether the lead contained in these samples would be characterized as a hazardous waste. Results of the analyses did not detect TCLP

lead above the USEPA hazardous waste threshold of 5 milligrams per liter (mg/L) in any of the three samples, indicating that the sampled soil would not be characterized as hazardous.

In the absence of other indications of contamination, the metals exceedances are attributed to historic fill observed in each of the soil borings and/or naturally occurring levels. Analytical results for total metals and TCLP lead are presented in **Table 6**.

4.4.1 Waste Characterization Parameters in Soil

A review of the analytical results indicates that cyanide, hexavalent chromium, and gasoline range organics (GRO) total petroleum hydrocarbons (TPH) were not detected in soil samples. Diesel range organics (DRO) TPH were detected in all four of the waste characterization samples, as summarized in the following table:

Summary of Total Petroleum Hydrocarbons Detected in Soil

Client ID Date Sampled Units = mg/kg	SB-1WC 08/01/17	SB-8WC 07/31/17	SB-15WC 08/01/17	SB-17WC 08/01/17	SB-18(0-2) 08/02/17
GRO	3.4 U	2.7 U	2.2 U	2.7 U	2.5 U
DRO	26	40	14	40	15

Notes:
mg/kg = milligrams per kilogram
U = Not detected

There are no applicable regulatory criteria for TPH in New York State. TPH results provide information on soil disposal options for soil excavated during construction, since disposal facilities in the New York City metropolitan area typically require TPH analyses prior to accepting soil for disposal. The concentrations of TPH noted in the samples are not anticipated to impact potential soil disposal options. Analytical results for TPH analysis of the soil samples collected are included in **Table 7**.

4.5 Groundwater Sampling Findings

Apparent perched groundwater was measured at 26.5 feet bgs in temporary well (TW-15). Groundwater was not encountered in the other temporary wells installed during the Phase II ESI (TW-1, TW-12, and TW-17). Based on the Site's topography and location relative to nearby water bodies, the regional groundwater flow direction in the areas surrounding the Site is assumed to be southeasterly, and actual groundwater is expected deeper than 100 feet bgs. No visual evidence of contamination (e.g., discoloration, free product, orange precipitate, etc.) was observed in groundwater purge water or in the samples.

Laboratory QA/QC procedures and analyses were used to demonstrate whether groundwater analytical results have been biased by either interfering compounds in the sample matrix or by laboratory techniques that may have introduced systematic or random errors to the analytical process. Additionally, one aqueous trip blank was submitted to determine whether compounds were introduced to the samples during shipment. No groundwater samples required dilutions and all data was determined to be representative and of acceptable quality for the purposes of this investigation.

The results of the analyses of the groundwater sample are presented in Tables 8 through 10. The complete analytical data reports are presented in Appendix D. A review of the groundwater analytical results is presented in the following sections.

4.5.1 Volatile Organic Compounds (VOCs) in Groundwater

The laboratory analytical results indicate that one VOC (acetone) was detected in the groundwater sample at a concentration below its AWQS. No other VOCs were detected in the groundwater sample. A summary of the groundwater analytical results for VOCs in groundwater is presented in **Table 8**.

4.5.2 Semivolatile Organic Compounds (SVOCs) in Groundwater

The laboratory analytical results indicate that two SVOCs, caprolactam and di-n-butyl phthlate, were detected in the groundwater sample at estimated concentrations below their respective AWQSs. No other SVOCs were detected in the groundwater samples. A summary of the analytical results for SVOCs in groundwater is presented in **Table 9**.

4.5.3 Metals in Groundwater

Total Metals

A review of the analytical results for the unfiltered groundwater samples indicates that 12 of the 17 metals analyzed for were detected in the groundwater sample below their respective AWQSs. The metals detected in the unfiltered groundwater samples are primarily attributed to sediment entrained in the samples and not to an on-site release. A summary of the analytical results for total metals in groundwater is presented in **Table 10**.

Dissolved Metals

Due to insufficient volume of the groundwater sample due to low recharge in the temporary monitoring well, the analysis for dissolved metals was unable to be performed.

4.6 Soil Vapor Assessment Findings

4.6.1 Sub-Slab Vapor Sampling Findings

Three (3) VOCs were detected in sub-slab vapor sample SV-ES1 at concentrations exceeding the NYSDOH AGV and/or background range, as summarized in the following table:

Summary of Detected VOC Concentrations Greater than Background Concentrations in Sub-Slab Vapor

Sample ID Sample Date Units = µg/m3	NYSDOH Air Guideline Guideline Value	NYSDOH Background Range	SV-ES1 11/11/2017
cis-1,2-Dichloroethene	***NS***	***0.4-<1.9***	**3.7**
Tetrachloroethene	***30***	***2.5-15.9***	**18**
Trichloroethene	***2.0***	***0.5 - 4.2***	3.3

Notes:
µg/m^3 = micrograms per cubic meter
NS = A standard has not been established for the analyte.
Exceedances of NYSDOH Background Ranges are highlighted in **bold** font.
Exceedances of NYSDOH AGVs are shaded in gray.

All other detected VOC concentrations in the supplemental sub-slab vapor samples were below their respective NYSDOH background ranges. Analytical results for VOCs in the supplemental sub-slab vapor samples are included in **Table 11**. The complete analytical data report is presented in Appendix D.

4.6.2 Ambient Air Sampling Findings

VOCs were not detected in the ambient air sample at concentrations above the corresponding AGVs or the range of outdoor air background levels presented in the NYSDOH Vapor Intrusion Guidance Document. A summary of the analytical results for VOCs in the ambient air samples is presented in **Table 11**. The complete analytical data report is presented in Appendix D.

4.6.3 Discussion

The detected TCE and cis-1,2-dichloroethene concentrations in sub-slab vapor sample SV-ES1 were compared to Matrix A of the NYSDOH Vapor Intrusion Guidance Document, and the detected PCE concentration was compared to Matrix B. Comparison to the matrices indicated that the recommendation for the detected TCE, cis-1,2-dichloroethene, and PCE concentrations would be either "no further action" or "identify source(s) and resample or mitigate" depending on the corresponding indoor air concentrations. Since comparison to the matrices did not indicate a scenario requiring potential mitigation of soil vapor intrusion regardless of the indoor air level, the indoor air samples collected during the VI sampling were not analyzed.

4.7 Summary of Findings

AKRF performed a Phase II ESI consisting of initial soil, groundwater, and soil/sub-slab vapor sampling throughout the Site and supplemental soil and soil vapor assessment sampling in the areas of the elementary school building and maintenance garage. The results of the Phase II ESI indicate the following:

- The locations of the three known USTs and associated fill lines were verified during by the geophysical survey, and three additional cylindrical metallic anomalies were identified. Two of these anomalies were determined to be related to on-site utilities. The third anomaly, located south of the garage area, could be a UST or other buried structure. Two soil borings were advanced adjacent to this anomaly during the supplemental Phase II ESI field work.
- Groundwater was encountered at 26.5 feet below ground surface (bgs) in temporary well TW-15 installed at soil boring SB-15 during the Phase II ESI. Although, moist to wet soil was encountered when soil borings SB-1, SB-12, and SB-17 were extended to approximately 30 to 40 feet bgs, groundwater was not measured in the temporary wells installed in these borings. Based on these observations and USGS data indicating that the water table in the Site vicinity is likely greater than 100 feet bgs, the groundwater measured in TW-15 is likely a lens of perched groundwater on low permeable material. Shallower perched water was also noted within a silt/clay layer at approximately 10 to 20 feet bgs in soil boring SB-GA1. Based on topography and the location of nearby surface water bodies, the regional groundwater flow direction in the area surrounding the Site is assumed to be toward the southeast.
- Subsurface soil generally consisted of a layer of fill material (sand, gravel, and silt, with varying amounts of brick, concrete, wood, clay, asphalt, and organic material) from the ground surface to depths ranging from approximately 5 to 20 feet bgs. Apparent native sand and silt with some gravel and clay was encountered in some of the borings below the historic fill layer.
- Mild petroleum-like odors were detected in soil boring SB-7 between approximately 2 and 3 feet bgs, likely attributable to a thin layer of stained sand observed in the soil boring along the fill line for the UST at the chapel building. No elevated PID readings were noted in this boring, and all VOC and SVOC concentrations were below the NYSDEC UUSCOs and SSCOs in the laboratory sample from this depth interval. No field evidence of contamination was noted in any of the other soil borings advanced near the known on-site fuel oil USTs or the suspect UST south of the maintenance garage.

- No VOCs were detected in any of the soil samples at concentrations exceeding their respective UUSCOs.
- Eight SVOCs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, di-n-butyl phthalate, indeno(1,2,3-cd)pyrene, and isophorone] were detected at concentrations above UUSCOs and/or SSCOs in six of the soil samples analyzed. Since these samples did not exhibit field evidence of contamination, the detected SVOCs are not indicative of a petroleum spill or other release, and are likely related to the historic fill material noted in the borings (or possibly due to laboratory contamination for di-n-butyl phthalate).
- Four pesticides were detected in one or more of the soil samples. Of these, two compounds (4,4-DDT, and 4,4-DDE) were detected at concentrations above their respective UUSCOs, and are attributed to historic fill material and/or previous pesticide use.
- PCBs and herbicides were not detected in any of the soil samples.
- Of the 14 metals detected in soil, 6 (arsenic, copper, lead, mercury, nickel, and zinc) were identified at concentrations exceeding their respective UUSCOs in one or more of the samples and 1 (vanadium) was identified at concentrations exceeding its SSCO in two of the samples. These metal concentrations are attributed to the historic fill material and/or naturally occurring conditions.
- Three (3) soil samples had the potential to exhibit the toxicity characteristic for lead; therefore, Toxicity Characteristics Leaching Procedure (TCLP) analysis was run on the samples. Lead was not detected at a concentration exceeding the toxicity characteristic for lead in any of the three samples.
- The concentrations of TPH noted in the waste class samples are not anticipated to impact potential soil disposal options.
- No VOCs, SVOCS, or metals were detected above the Class GA AWQSs in the groundwater sample collected during the Phase II.
- Petroleum-related compounds detected in soil vapor and sub-slab vapor at concentrations above their published background levels are likely associated with historic and current fuel oil use at the Site.
- PCE and TCE detected above their respective NYSDOH AGVs in the sub-slab vapor sample SV-11 and TCE was detected above its AGV in sub-slab vapor sample SV-ES1, both collected from under the boiler room in the elementary school building's sub-basement. However, these compounds were not detected in any soil samples analyzed for this Phase II ESI, including those samples collected from three supplemental soil borings advanced in/near the boiler room. Furthermore, PCE and TCE concentrations were below their respective AGVs in the two sub-slab samples collected from under the main basement level in the elementary school (SV-12 and SV-ES2). These findings indicated that the PCE and TCE detected in sub-slab vapor under the boiler room represent an isolated condition, possibly related to historic solvent use for boiler maintenance, and are not indicative of a widespread release or source area.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the Phase II ESI, AKRF concludes the following:

- In addition to the three known fuel oil underground storage tanks (USTs) at the Site, the geophysical survey identified an anomaly indicative of a potential fourth UST south of the garage area. Additional metallic anomalies identified during the geophysical survey are attributed to stormwater and water service utilities.
- Apparent perched groundwater was encountered at 26.5 feet below ground surface (bgs) in one temporary well installed during the Phase II ESI. Based on the Site elevation and United States Geological Survey (USGS) information, the groundwater table in the Site vicinity is expected to be greater than 100 feet bgs.
- Subsurface soil generally consists of a shallow layer of historic fill overlying apparent native sand and silt with some gravel and clay.
- Petroleum-related volatile organic compounds (VOCs) detected in several soil/sub-slab vapor samples above the corresponding New York State Department of Health (NYSDOH) background ranges are attributed to the on-site petroleum use/storage.
- Tetrachloroethene (PCE) and trichloroethene (TCE) detected above their corresponding NYSDOH air guideline values (AGVs) in sub-slab vapor samples collected under the elementary school sub-basement appear to represent an isolated condition and are possibly related to the historic use of solvents for boiler maintenance activities.
- No VOCs were detected in soil at concentrations above their respective UUSCOs, and no polychlorinated biphenyls (PCBs) or herbicides were detected in any of the soil samples.
- Semivolatile organic compounds (SVOCs), metals, and pesticides detected in soil at concentrations exceeding their respective NYSDEC Part 375 UUSCOs and/or CP-51 SSCOs are attributed to background conditions and/or historic fill noted in the Site subsurface, and not to an on-site release.
- Metals detected in the unfiltered groundwater sample analyzed are attributed to sediment entrained in the groundwater during sampling. No metals were detected above Class GA Ambient Water Quality Standards.

Based on the findings of the Phase II ESI and our understanding that the existing on-site buildings would be converted for use as public schools, AKRF recommends the following:

- Modifications should be made to the elementary school's ventilation system, as necessary, to ensure that the partial sub-basement is separately ventilated from the remainder of the building.
- Any suspect asbestos containing material (ACM), lead-based paint (LBP), and/or PCB-containing materials should be properly maintained in accordance with NYCSCA protocols, and any such materials affected by proposed renovation, demolition, or construction activities at the Site be identified and properly managed during those activities in accordance with all applicable regulations and NYCSCA policies and procedures.
- If excavation is required as part of proposed renovations, all excavated material should be properly characterized prior to transportation to an off-site disposal facility. Results from the limited waste characterization sampling conducted during this investigation should not be used in lieu of data from a full Site characterization. In addition, any imported backfill should be tested to ensure that it conforms to NYCSCA requirements for environmentally-clean fill.

- The metallic anomaly identified south of the maintenance garage should be investigated to verify whether an underground storage tank is present. If a UST is verified, it should be properly addressed in accordance with state and local regulations.

A description of the recommended engineering controls, including a remediation cost estimate, is included in Appendix F.

6.0 LIMITATIONS

AKRF has prepared this Phase II ESI using reasonable efforts in each phase of its work to investigate RECs/VECs associated with hazardous substances, wastes and petroleum products at the Site. Findings within this report are based on information collected from observations made at the time of the investigation and associated data. This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes. This report was prepared for the sole use of NYCSCA and related New York City municipal agencies pursuant to the AKRF Contract dated August 1, 2014.

7.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

AKRF has performed a Phase II Environmental Site Investigation and Supplemental Environmental Site Investigation of the 57-61 Cleveland Place Site in Staten Island, New York. The scope of the Phase II ESI and supplemental ESI were consistent with the scopes of work dated June 20, 2017 and September 28, 2017, respectively, as stated in Section 2.0.

Notes

GENERAL

NS : No standard.

NA : Not applicable.

U : The analyte was not detected at the indicated concentration.

J : The concentration given is an estimated value.

TS : Value represents a sum total standard.

B : The analyte was found in an associated blank, as well as in the sample.

*** :** RPD of the LCS and LCSD exceeds the control limits.

SOIL

CP-51 Soil Cleanup Objectives : Supplemental Soil Clean-up Objectives listed in Table 1 of NYSDEC "CP-51/Soil Cleanup Guidance."

Part 375 Soil Cleanup Objectives : Soil Cleanup Objectives listed in NYSDEC (New York State Department of Environmental Conservation) "Part 375" Regulations (6 NYCRR Part 375).

mg/kg : milligrams per kilogram = parts per million (ppm)

Metals

***** :** Standard reflects trivalent, not total, Chromium.

Exceedances of Part 375 Unrestricted Soil Cleanup Objectives (UUSCO) are highlighted in bold font.
Exceedances of CP-51 Supplemental Soil Cleanup Objectives are highlighted in gray.

GROUNDWATER

NYSDEC Class GA Ambient Standard : New York State Department of Environmental Conservation Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values.

µg/L : micrograms per Liter = parts per billion (ppb)

ND : The standard is No Detect.

Exceedances of NYSDEC Class GA Ambient Standards are highlighted in bold font.

SOIL VAPOR

EPA 2001 BASE 90th percentile : 90th Percentile indoor air values from “Table C-2. EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method”, published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C” (October 2006).

NYSDOH 2003 Soil Vapor Indoor Upper Fence : Upper fence indoor air values from "Table C1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes", published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C” (October 2006).

HEI RIOPA 2005 95th percentile : 95th Percentile Indoor Air Values from Table C-5, Health Effects Institute (HEI) 2005: Relationship of Indoor, Outdoor and Personal Air, published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C” (October 2006).

NYSDOH Soil Vapor Intrusion Air Guidance Value : NYSDOH Air Guidance Values (AGVs) presented in the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 (“NYSDOH Vapor Intrusion Guidance Document”), updated September 2013 for change of AGV for PCE and August 2015 for TCE.

µg/m^3 : micrograms per cubic meter of air

NC : Upper fence not calculated.

Exceedances of NYSDOH Background Ranges are highlighted in bold font.
Exceedances of NYSDOH Air Guidance Values are highlighted in gray.

July 20, 2017

Mr. Yujaya Mikkilineni
New York City School Construction Authority
Industrial and Environmental Hygiene
30-30 Thomson Avenue
Long Island City, NY 11101

RE: St. John Villa Campus (R031B)
57 Cleveland Pl, Staten Island, NY 10305
LLW #107932, SID #67196

Dear Mr. Mikkilineni:

In response to your request for bulk sampling of materials at the above referenced project for the Proposed Exploratory Borings, Airtek Environmental Corp. has conducted an asbestos inspection at St. John Villa Campus, Staten Island, NY on 07/6/117 & 7/7/17, based upon the Boring Request and Plan dated 06/05/17.

The following areas were tested and/or surveyed:

Location	Material	# of Samples	Results	Comments / Boring Locations
Grounds	Grass & Soil	0	Non-suspect	SV-2, SV-3, SV-4, SB-4, SV-5, SB/TW-5, SB-6, SB-7, SB-8, SB-9, SB-10, SB-11, SB/TW-12, SB-13, SB-14, SB/TW-17, SB-18, SB-19
Parking Lot & Roadway	Asphalt	3	Non-ACM	SB/TW-1, SV-1, SB-2, SB-3, SB/TW-15, SB-16
High School	1x1 Pink Ceramic Tile	3	Non-ACM	SV-8
High School	**Terrazzo**	**0**	**Assumed ACM**	**SV-7**
High School	Terrazzo Mortar Bed	3	Non-ACM	SV-7
High School	1x1 Orange VFT & Mastic	6	Non-ACM	SV-6
High School	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-6, SV-7, SV-8**
Chapel	1x1 Tan VFT & Mastic	6	Non-ACM	**SV-9**
Chapel	**9x9 Green VAT**	**3**	**ACM**	
Chapel	9x9 Mastic	3	Non-ACM	
Chapel	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-9**
Convent	Orange Brick Mortar	3	Non-ACM	SV-10
Convent	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-10**
Elementary School	Gray Painted Concrete	3	Non-ACM	SV-11
Elementary School	**Terrazzo**	**0**	**Assumed ACM**	**SV-12**

Elementary School	Terrazzo Mortar Bed	3	Non-ACM	SV-12
Elementary School	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-11, SV-12**
CD Center-UPK	**9x9 Gray VAT**	**3**	**ACM**	**SV-13**
CD Center-UPK	**9x9 Green VAT**	**3**	**ACM**	
CD Center-UPK	**9x9 VAT Mastic**	**3**	**ACM**	
CD Center-UPK	1x1 Beige VFT (Top Layer)	3	Non-ACM	SV-14
CD Center-UPK	**1x1 Beige VFT Mastic**	**0**	**Assumed ACM**	**SV-14**
CD Center-UPK	**9x9 Blue VAT (Bottom Layer)**	**3**	**ACM**	**SV-14**
CD Center-UPK	**9x9 Blue VAT Mastic**	**0**	**Assumed ACM**	**SV-14. Mastic is assumed – too thin to sample**
CD Center-UPK	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-13, SV-14**
Annex – Shop	1x1 Red VFT & Mastic	6	Non-ACM	SV-15
Annex – Storage	**Terrazzo**	**0**	**Assumed ACM**	**SV-16**
Annex – Storage	Terrazzo Mortar Bed	3	Non-ACM	SV-16
Annex	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-15, SV-16**
Gym / Aud	**1x1 Orange VAT**	**3**	**ACM**	**SV-17**
Gym / Aud	**1x1 Orange VAT Mastic**	**0**	**Assumed ACM**	**SV-17. Mastic is assumed – too thin to sample**
Gym / Aud	Gray Painted Concrete	3	Non-ACM	SV-18
Gym / Aud	**Floor Fill/Underlayment**	**0**	**Assumed ACM**	**SV-17, SV-18**

Note: All boring locations were on the ground level.

Any material not mentioned above shall be assumed ACM.

The **Exploratory Exterior Borings** that are proposed can be conducted without utilizing asbestos abatement procedures. The Contractor is required to contact Airtek Environmental Corp. **at least 24hrs prior to conducting the Exploratory Exterior Borings** in order for Airtek Environmental Corp. to assign a certified New York City Asbestos Investigator to identify and collect samples and submit for analysis for ACM content, if necessary, of additional suspect building materials if observed during the probes.

The **Exploratory Interior Borings** that are proposed **must be** conducted utilizing asbestos abatement procedures utilizing an NYC SCA IEH approved contractor. The Contractor is required to contact Airtek Environmental Corp. **two (2) weeks prior to conducting the Interior Borings** in order for Airtek Environmental Corp. to assign a Project Monitor to collect air samples and submit for analysis du ring the probes.

Thank you for granting Airtek the opportunity to be of service. Please do not hesitate to contact our office if you have any questions.

Sincerely yours,
Airtek Environmental Corp.

Michael Porter,
Senior Project Manager

Enayat Nassry,
NYC Investigator

RECEIVED BY: _____ DATE: _____ TIME: _____
ANALYZED BY: Enrico Labelle/Ali DATE: 7-17-17 TIME: _____
CHECKED BY: _____ DATE: _____ TIME: _____

FIELD NOTES:

ANALYZE: ☐ ALL ☐ PLM ☒ STOP AT FIRST POSITIVE ☐ TEM (if necessary)

NYSDOL INSPECTOR: M. ALI
CERTIFICATE NO.: 89-01641
TELEPHONE NO.: (718) 937-3720
ADDRESS: Airtek Environmental Corp. 39-37 29th Street, L.I.C., NY 11101

1. A visual determination of accessible suspect materials and condition.
2. Collect bulk samples of suspect building materials.
3. A physical "Hand Pressure" test for determining friability and condition.
4. Assessment of suspect friable and non-friable materials and locations.
5. Quantify the amount of suspect materials in their respective locations.
6. Submit bulk samples for analysis by PLM and/or TEM Method.
7. Bulk Sample locations and suspect materials were identified on the appropriate building floor plan diagram with the sample number.
8. A Chain of Custody record accompanied the samples to the laboratory.
9. Any inconclusive result for a NOB must be confirmed by TEM or assumed ACM.

July 13, 2017

Delta Geophysics, Inc. (Delta) is pleased to provide the results of the geophysical survey conducted at 57 Cleveland Place Staten Island, New York 10305.

1.0 INTRODUCTION

On July 12 and 13, 2017 Delta Geophysics personnel performed a limited geophysical investigation at 57 Cleveland Place Staten Island, New York 10305. The areas of interest included various proposed boring locations throughout the campus of a school. Surface conditions consisted of asphalt, concrete, grass, and heavily wooded areas.

2.0 SCOPE OF WORK

The survey was conducted to locate and mark all utilities within proximity of the proposed boring locations. A secondary objective was to investigate the subsurface for anomalies consistent with USTs and/or excavations, and any other unknown anomalous features within proximity of proposed borings. Per the client's instructions, Delta personnel did not survey the entire property during this survey.

3.0 METHODOLOGY

Selection of survey equipment is dependent site conditions and project objectives. For this project the technician utilized the following equipment to survey the area of concern:

- Geophysical Survey Systems Inc. SIR-3000 cart-mounted Ground Penetrating Radar (GPR) unit with a 400 Mhz antenna.
- Radiodetection RD7000 precision utility locator.
- Fisher M-Scope TW-6 pipe and cable locator.

Ground penetrating radar (commonly called GPR) is a geophysical method that has been developed over the past thirty years for shallow, high-resolution, subsurface investigations of the earth. GPR uses high frequency pulsed electromagnetic waves (generally 10 MHz to 1,000 MHz) to acquire subsurface information. Energy is propagated downward into the ground and is reflected back to the surface from boundaries at which there are electrical property contrasts. GPR is a method that is commonly used for environmental, engineering, archeological, and other shallow investigations.

The GSSI SIR-3000 GPR can accept a wide variety of antennas which provide various depths of penetration and levels of resolution. The 400 MHz antenna can achieve depths of penetration up to about 20 feet, but this depth may be greatly reduced due to site-specific conditions. Signal penetration decreases with increased soil conductivity. Conductive materials attenuate or absorb the GPR signal. As depth increases the return signal becomes weaker. Penetration is the greatest in unsaturated sands and fine gravels. Clayey, highly saline or saturated soils, areas covered by steel reinforced concrete, foundry slag, of other highly conductive materials significantly reduces GPR depth of penetration.

The GPR was configured to transmit to a depth of approximately 10 feet below the subsurface, but actual signal penetration was approximately 1-3 feet below ground surface (bgs). The limiting factor was signal attenuation from near surface soils.

The RD7000 precision utility locator uses radio emission to trace the location of metal bearing utilities. This radio emission can be active or passive. Active tracing requires the attachment of a radio transmitter to the utility, passive tracing uses radio emissions that are present on the utility. Underground electrical utilities typically emit radio signals that this device can detect.

The TW-6 is designed to find pipes, cables and other metallic objects such as underground storage tanks. One surveyor can carry both the transmitter and receiver together, making it ideally suited for exploration type searches of ferrous metal masses. Metal detectors of this type operate by generating a magnetic field at the transmitter which causes metallic objects in the subsurface to generate a secondary magnetic field. The induced secondary field is detected by the receiver, which generates an audible tone equal to the strength of the secondary field.

4.0 SURVEY FINDINGS

All accessible areas within proximity of the client-designated boring locations were examined during this investigation. Locations were surveyed with the RD-7000 for potential subsurface utilities, then surveyed with TW-6 and GPR for potential anomalous features. Delta personnel located four metallic anomalies, three known USTs, and utilities during the survey. The following sections detail the findings of the geophysical investigation.

Metallic Anomaly #1

Delta utilized the TW-6 and GPR to detect a metallic anomaly east of the fence on Cleveland Place, near SB-6 and SB-7. The anomaly is approximately 5 feet long and 5 feet wide. GPR transects imaged a flat feature approximately 2-3 feet bgs, however its specific identity is unknown.

Metallic Anomaly #2

Delta utilized the TW-6 and GPR to detect a metallic anomaly at the base of the stairs to the Chapel, near SB-9. GPR transects imaged a cylindrical feature approximately 6 feet long and 4 feet wide. Based upon TW-6 and GPR data collected, this feature is potentially a UST.

Metallic Anomaly #3

Delta utilized the TW-6 and GPR to detect a metallic anomaly east of the Garage. GPR transects imaged a cylindrical feature approximately 7 feet long and 5 feet wide, however the feature's proximity to a concrete wall and metal plate prevented an accurate delineation of its dimensions. Based upon TW-6 and GPR data collected, this feature is potentially a UST.

Metallic Anomaly #4

Delta utilized the TW-6 and GPR to detect a metallic anomaly southeast of the Garage, partially beneath the concrete path leading to the Gymnasium. GPR transects imaged a cylindrical feature approximately 9 feet long and 5 feet wide. Based upon TW-6 and GPR data collected, this feature is potentially a UST.

Known UST #1

Delta utilized the TW-6 and GPR to delineate a known 6,000-gallon No. 2 fuel oil UST in the path adjacent to the Chapel. A remote fill, vent, and product lines were located leading to the UST. The UST measures approximately 16 feet long and 8 feet wide.

Known UST #2

Delta utilized the TW-6 and GPR to delineate a known 2,000-gallon No. 2 fuel oil UST northeast of the Elementary School. Vent and product lines were located leading to the UST. The UST measures approximately 12 feet long and 5 feet wide.

Known UST #3

Delta utilized the TW-6 and GPR to delineate a known 2,000-gallon No. 2 fuel oil UST southeast of the Annex. Vent and product lines were located leading to the UST. The UST measures approximately 12 feet long and 5 feet wide.

Utility Survey

Delta personnel identified the following utilities during the survey: natural gas, electric, sanitary sewer, storm sewer, water, vent lines, fill lines, product lines, and unknown utilities. All located utilities were marked in the appropriate colors. Vent lines, fill lines, product lines, unknown utilities, metallic anomalies, and known USTs were marked in pink paint.

5.0 SURVEY LIMITATIONS

GPR depth of penetration was limited to approximately 1-3 feet bgs. The limiting factor was due to conductive soils. The TW-6 was unable to be used over areas of reinforced concrete or metal plating, and could not be utilized within proximity to metal fences, buildings, or parked cars. Reinforced concrete severely attenuated GPR signal penetration, reducing overall effectiveness.

6.0 WARRANTIES AND DISCLAIMER

As with any geophysical method, it must be stressed that caution be used during any excavation or intrusive testing in proximity to any anomalies indicated in this report. In addition, the absence of detected signatures does not preclude the possibility that targets may exist. To the extent the client desires more definitive conclusions than are warranted by the currently available facts; it is specifically Delta's intent that the conclusions stated herein will be intended as guidance.

This report is based upon the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations. Professional judgments expressed herein are based on the facts currently available within the limit or scope of work, budget and schedule. Delta represents that the services were performed in a manner consistent with currently accepted professional practices employed by geophysical/geological consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

This report was prepared pursuant to the contract Delta has with the Client. That contractual relationship included an exchange of information about the property that was unique and between

Delta and its client and serves as the basis upon which this report was prepared. Because of the importance of the understandings between Delta and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to Delta.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Delta's contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

Re: Geophysical Engineering Survey (GES) Report
St. John Villa Academy
57 Cleveland Place
Staten Island, New York 10305

Dear Ms. Matamoros:

Nova Geophysical Services (NOVA) is pleased to provide findings of the geophysical engineering survey (GES) at the above referenced project site: 57 Cleveland Place, Staten Island, New York 10305 (the "Site"). Please see attached Site Location and Survey Plan maps for more details.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a Geophysical engineering surveys (GES) consisting of a Ground Penetrating Radar (GPR) survey at the site. The purpose of this survey is to locate and identify utilities and other substructures as well as clear boring locations on November 10th, 2017.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) shielded antenna and a Radio Detection R7100 electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

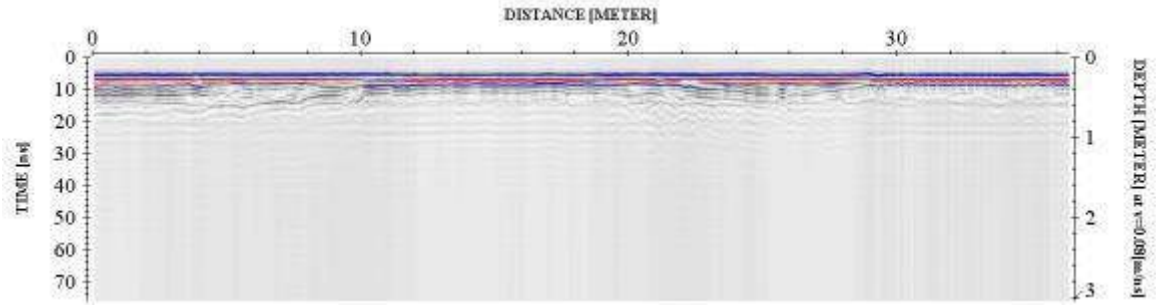
The project site was screened using the GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface.

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed areas consisted of asphalt, concrete, and soil.

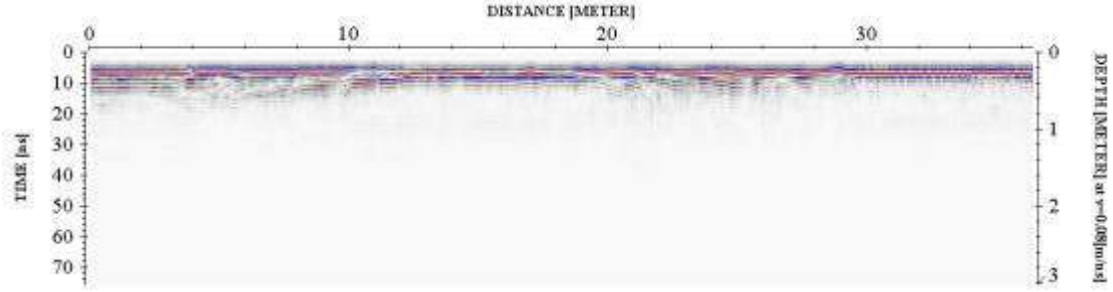
DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described in this section.

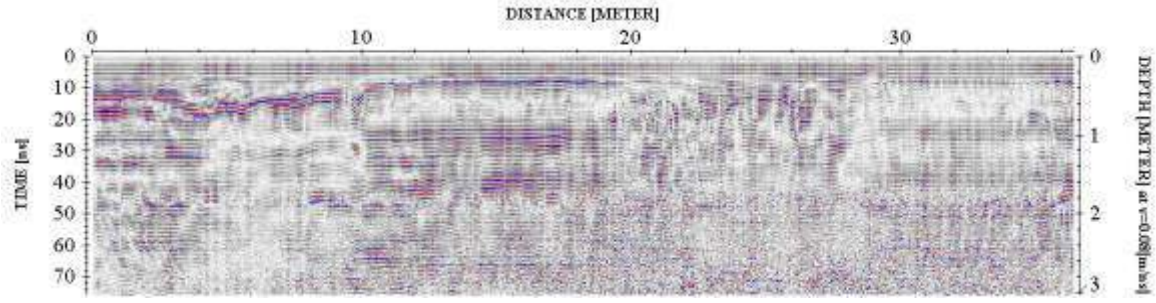
Step 1. Import raw RAMAC data to standard processing format



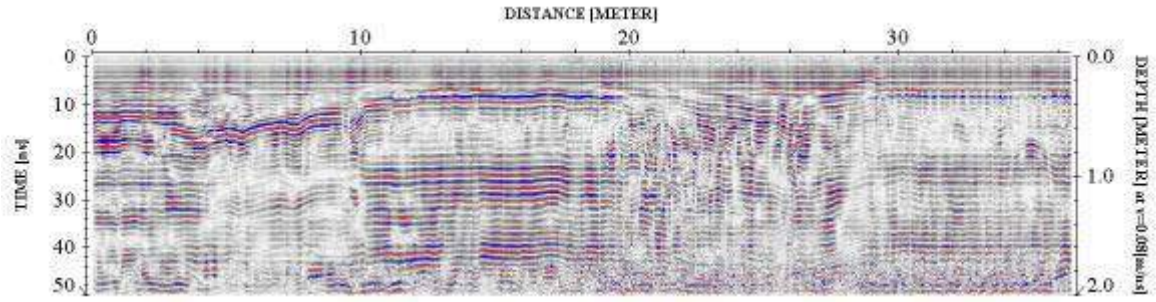
Step 2. Remove instrument noise *(dewow)*



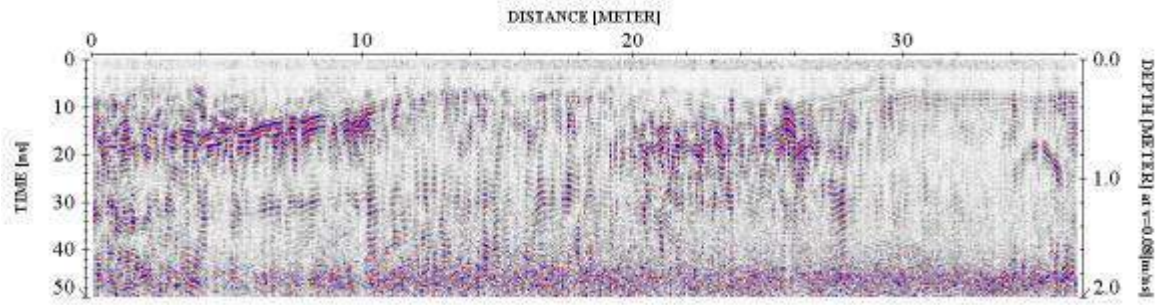
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

PHYSICAL SETTINGS

NOVA observed following physical conditions at the time of the survey:

Weather: Sunny

Temperature: 30 Degrees (F)

Surface: Asphalt, concrete, soil

Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) was medium at the site. The noise was a result of the site being located in a suburban environment.

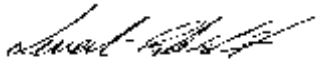
RESULTS

The results of the geophysical engineering survey (GES) identified following at the project Site:

- NOVA surveyed 3 discrete areas as depicted on the Survey Plan.
- The Survey Plan depicts the water, gas, electric, sanitary sewer and storm sewer lines found within the survey areas.
- NOVA identified two large geophysical anomalies. A vent pipe line, fuel oil feed and return lines, and a direct fill port were also identified corresponding to the anomaly in the North portion of the site.
- All detected subsurface anomalies were marked in the onsite mark out.
- Nova cleared and marked all of the proposed boring locations at the site.
- The Survey Plan portrays the subsurface areas investigated during the GES.

If you have any questions, please do not hesitate to contact the undersigned.
Sincerely,

NOVA Geophysical Services



Levent Eskicakit, P.G., E.P.
Project Engineer

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

CASE NARRATIVE

Client: AKRF Inc

Project: St. John Villa

Report Number: 200-40953-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/14/2017; the samples arrived in good condition.

During the canister pressure check performed upon receipt, sample SV-ES2 was found to be received at ambient pressure. The associated flow controller was evaluated and was found to be outside the acceptable flow range as compared to the original set flow rate. The laboratory was instructed to proceed with analysis.

VOLATILE ORGANIC COMPOUNDS

Samples SV-ES1, SV-ES2 and AA-1 were analyzed for Volatile Organic Compounds in accordance with EPA Method TO-15. The samples were analyzed on 11/14/2017 and 11/15/2017.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: AKRF Inc
Project/Site: St. John Villa

TestAmerica Job ID: 200-40953-1
SDG: 200-40953-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Matrix	Analyte	Units	Client RL	Lab PQL
