Dear Customer:

Our records indicate that the natural gas piping at this address operates at a higher pressure than usual in order to meet the special needs of your gas burning equipment. We would like to take a moment of your time to remind you of this and to point out that because of this elevated pressure, special care must be taken when modifying the building's gas piping system or when adding, replacing or modifying the gas burning equipment in the premises.

Before adding any new gas appliances/equipment, or making any piping changes, you must contact us to conduct a safety review of the planned installation. We need to ensure that the proposed installation is properly regulated and vented in accordance with the National Fuel Gas Code. Please contact us if you have made any such changes during the past year that have not yet been inspected.

To have this inspection conducted, please call (718) 270-5976 and ask our Representative to schedule a "safety review of your high pressure piping and appliances." We'll do our best to make this appointment at a time that is convenient for you.

Thank you.

Sincerely,

National Grid
