

**It took years  
to make it a farm...  
It takes one call  
to keep it safe.**

You know your land, every inch of it. If you have pipelines on your property, protect yourself, your land and your equipment by first notifying 811 before any type of excavation.

Farm equipment is a common cause of pipeline damage. Be sure to call 811 before plowing, tilling, terracing, sub-soiling or installing a fence.

There are more than two million miles of pipelines buried in the United States. Nobody is more at risk to come in conflict with a buried utility than farmers and ranchers.
