

HEDIS MY2025 is almost complete!

In May, the HEDIS Team will complete the Medical Record Review Validation (MRRV) Audits.

The Annual Summary of Performance will be reported on our website in mid-September.

Thank you to all for your support of the annual Medical Record Retrieval Project!

Next up is our HEDIS MY2026 Supplemental Data Review (SDR) Project, formerly known as Year-Round Medical Record Review (YRMRR) see the following timeline for upcoming activities:

Date:	Activity:
June to Mid-July 2026	HEDIS Team to begin sending out the provider information form – a necessary document to ensure we are contacting the appropriate people to request records.
	Provider Webinar to explain the SDR Project
Late July 2026	Launch the MY2026 SDR Project where we will begin requesting medical records for the purpose of identifying where to target interventions to support your HEDIS efforts.

Mind Your Measure

We are now reporting the Developmental Screening in the first Three Years of Life (DEV-CH) as a hybrid measure.

To meet HEDIS and Site Review standards medical records must contain evidence of the standardized tool used, the date of the screening, and the screening result or score. i.e. ASQ-3, Path E no concerns or Total Score of 120. Additionally, the members' name and DOB must be included on the screening tool.

Please refer to the measure instruction sheet included with the medical record request for additional details.

Contact the HEDIS Team with questions at:

HEDISMRA@partnershiphp.org or our new phone number: (866) 894-0609

HEDIS Reminders

Has your primary HEDIS contact information recently changed? Email HEDISMRA@partnershiphp.org with updated information for your office to help us ensure a timely and efficient HEDIS MY2026!

HEDIS MY2026 Medical Records

Providers can submit medical records via fax or direct upload using our secure ShareFile:

- Recommended for submitting electronic records (PDF)
- Enables real time view of records submitted for validation
- Reduces re-requests due to illegible records, failed faxes.
- Faxing is limited to providers unable to use ShareFile.

Not sure how to use ShareFile?

We have a tutorial on our website, click [here](#) to check it out.
