

SCALE AI-NATIVE SOFTWARE DELIVERY ON AWS

MOVE BEYOND AI CODING ASSISTANTS

AI coding tools may accelerate individual tasks, but they don't address the operating models, governance, and shared standards required to improve software delivery across teams.

Our AI-Driven Development Lifecycle (AI-DLC) applies AI across software delivery while establishing the governance, reusable standards, and operating model teams need to scale.

THE CHALLENGE

Individual Coding Gains Don't Fix Delivery Bottlenecks

AI coding assistants accelerate individual contributors, but most engineering organizations still struggle with:

- Serialized delivery models
- Knowledge loss between teams
- Limited engineering traceability
- Inconsistent standards and governance

Without an AI-native delivery model, organizations create faster silos, not faster outcomes.

01

Parallel Workstreams

Run multiple initiatives simultaneously.

02

Organizational Memory

Capture knowledge as reusable standards.

03

Enterprise Governance

Improve visibility, traceability, and accountability.

AWS AI-DLC ACCELERATOR

The AWS AI-DLC Accelerator gives engineering leaders a structured path for implementing AI-native delivery across teams, workflows, and governance.

Perficient embeds a 3-person Pod for 3 months. Your team operates it independently at the end.

Includes:

- Week Zero setup: team spaces, organization standards, scope rules
- IDE on Amazon Bedrock, configured and owned by your team
- First full piece of work delivered end-to-end, with approval gates
- Two workstreams running in parallel by month 2
- Team-owned standards that improve with every correction – plus a playbook to scale

ABOUT PERFICIENT

Perficient helps organizations modernize software delivery through AI, cloud, data, and platform engineering solutions. As an AWS Premier Tier Services & AWS AI Services Competency Partner, we help enterprises move from AI experimentation to measurable business outcomes.
