Game On for Downstream Townhall 2023

"Focus. Simplify. Perform." were the unifying threads that weaved throughout the Townhall of Datuk Szali Hamzah, PETRONAS Executive Vice President & CEO Downstream on 15 March 2023.

He recognised many major wins across multiple OPUs while setting up goals for the 'games' that we – at Downstream – will play for the next five to ten years.

A special spotlight was shone on PIC during the panel with the Downstream Executive Leadership team because we are the breeding ground for many growth projects, and "PIC is designed to succeed", said Datuk Szali.

This confidence boost was amplified by the audience who attended the special viewing of the town hall at Multi-Purpose Hall in PIC, which was live-streamed from the Kuala Lumpur Convention Centre.

The PETRONAS Lean Six Sigma (PLSS) Process Simplification Workshop was recently held in PRPC on 9 March 2023 by Master Black Belt trainer En M Hisham Hamdan from Organizational Improvement, GHRM. The workshop was attended by 19 staff from PRPC Group of Companies and intended to introduce the PLSS program to PRPC and upskill staff using LSS tools to drive continuous improvement (CI) initiatives.

En Hamdan took the opportunity to explain the LSS deployment and its benefit to the business by using a systematic approach to achieve and sustain success by focusing on customer-driven values: Cost, Delivery and Quality. Moreover, LSS has been identified as Capability Development Priorities for CI skills in supporting the MFT 50.30.0 target.

Simplify Processes, Improve Performance with PETRONAS Lean Six Sigma

He also introduced the Gemba Walk cycle and some tools used during the cycle. Gemba Walk is the term used to describe a tour/observation of the work's location. The original Japanese term comes from Gembutsu, which means "real thing." It also sometimes refers to the "real place."

The session continued with active discussion on the key tools: Value Stream Mapping (VSM), Process Cycle Efficiency and 8 types of waste. The tools are used to identify and eliminate non-value-added activities in a process. By analyzing the flow of materials, information, and actions required to deliver a product or service, VSM helps pinpoint inefficiencies and improvement areas.

PRPC has initiated its first move towards incorporating Continuous Improvement (CI) into its business. It is time to begin our LSS journey.

PRPC Extends Flood Relief to Kota Tinggi Residents

PRPC lent five units of Ford Rangers to the Royal Malaysia Police (PDRM) through a vehicle handover ceremony held in PIC on 4th March 2023 as part of the flood relief aid during "Ops Banjir".

This contribution was crucial for the Kota Tinggi communities,

which were reeled by one of the worst severe floods in decades. A total of 20 temporary relief centres were set up to provide shelter for about 3,600 flood evacuees.

Azree Ahmad Kamal represented PRPC in handing over the four-wheel drive units to Corporal M Syafiq Nawi and Corporal M Nur Zariq Ali, who represented the Ibu Pejabat Daerah (IPD) Kota Tinggi during the ceremony.

This initiative is part of PETRONAS' contribution of 20 four-wheel drives to assist the authorities in helping flood victims across Johor.

Tazkirah

Firman Allah SWT:

"Bulan Ramadhan yang padanya diturunkan Al-Quran, menjadi petunjuk bagi sekalian manusia, dan menjadi keterangan yang menjelaskan petunjuk dan (menjelaskan) perbezaan antara yang benar dengan yang salah."

(al-Baqarah)

Malaysia Oil & Gas Technical Committee visits PIC

Representatives from PETRONAS Group HSE(GHSE), Downstream Business Excellence (DBR), Malaysian Refining Company Sdn Bhd (MRCsb), Petron and Hengyuan Refining Company (HRC) came to visit PRefChem's Sulphur Recovery Unit (SRU), representing refining companies in Malaysia. The visit was to learn about SRU and review/influence DOE on revision for SOX NOX limit values under the Clean Air Regulations.

Selamat Menyambut Ramadhan Al-Mubarak 1444H
