SASOBIT

The versatile asphalt additive –
for more than 25 years

NEW

SASOBIT LC

Lower-carbon asphalt additive

SASOBIT has been solving numerous challenges in the bitumen-processing and asphalt industry for more than two decades.

SASOBIT allows denser and more deformation-resistant roads, airfields, racetracks, etc. – and even flooring in buildings.

Using SASOBIT, asphalt mix temperatures can be reduced significantly at production, transportation and paving. This saves energy, CO₂ and reduces emissions for the health protection.

SASOBIT increases process reliability in asphalt road construction, enables traffic to be released earlier and reduces traffic jams.

SASOBIT enables longer transport distances from the asphalt mixing plant to the construction site, as well as paving even in adverse weather conditions.

SASOBIT increases the impact resistance and weatherability of roofing membranes and allows more cost-efficient formulations.

SASOBIT is a state-of-the-art additive that is used to solve many different tasks and challenges.

More sustainability in the bitumen and asphalt industry with SASOBIT LC:

- Fischer-Tropsch wax with significantly lower CO₂ emissions
- Successful roll-out and proven effectiveness
- Equivalent performance in bitumen and asphalt modification as with SASOBIT

SASOBIT LC is part of our response to the global call for sustainability, helps to save greenhouse gases and offers advantages in the Environmental Product Declaration (EPD).
