Foreword

With extreme weather events linked to climate change witnessed throughout the world in 2024, the need to address these threats and mitigate their effects in line with the goal of minimising the global temperature rise to 1.5°C above pre-industrial levels has become impossible to ignore.

At the Luxembourg Stock Exchange (LuxSE), we know that finance holds the key to funding projects that make this global goal a reality. As the world's leading exchange for the listing of international debt securities and the home of the Luxembourg Green Exchange (LGX), we are in a unique position to influence capital markets and are dedicated to attaining net-zero emissions within our operations and the broader market.

We firmly believe that all players in the financial sector must unite to make finance a key part of addressing global challenges. At LuxSE, we are ready to contribute by actively working to reduce our carbon emissions and aim to become a net-zero business by 2050 at the latest. To promote transparency and accountability in the market, we have pledged to disclose our data and annual progress as part of our Climate Transition Plan.

At COP26 in Glasgow, in November 2021, we announced that our exchange was joining the Glasgow Financial Alliance for Net Zero (GFANZ), a global coalition of leading financial institutions committed to accelerating the decarbonisation of the economy. As an exchange, we joined GFANZ through the Net Zero Financial Service Providers Alliance (NZFSPA). Recognising the essential role played by GFANZ and NZFSPA when it comes to increasing awareness, inspiring action, and accelerating the climate transition, we are committed to leading by example in our actions and reporting in the hope that others will follow suit.

Global challenges require a global response and alliances like GFANZ facilitate international coherence, cooperation, and progress. As an internationally recognised exchange operating in the heart of the European Union, we are determined to make a meaningful contribution to the commitments of the Alliance, and we are confident that we can bring a valuable voice to this cooperation.

After signing GFANZ's 8-point commitment statement, our experts participated in the drafting of the Net Zero Target Setting Guidance for Exchanges, which was approved at the end of June 2023 by the UN High-Level Climate Change Champions overseeing the Race to Zero Campaign. Going forward, the exchange subgroup will review the target setting guidance every two years up to 2030 and every five years thereafter, or sooner when required.

The report below details our progress in our target setting and NZFSPA commitments on each focus area defined in the target setting guidance.

1 Governance

1.1 Exchanges should put appropriate governance structures in place to ensure accountability for and oversight of the development and execution of the NZFSPA commitments

Governance around NZFSPA commitments

A clear governance structure has been established to ensure the ownership, oversight, and responsibility for the net-zero targets. Clear roles are defined below, both for the governing bodies and the teams involved in the development, implementation, monitoring and disclosure process. As such:

- **Our Strategic Committee** is responsible for the oversight of the NZFSPA commitments.
- **Our Executive Committee** is responsible for the management, development and execution of the NZFSPA commitments.
- **Our LGX and Corporate Social Responsibility *(CSR)* teams**, led by the Head of Sustainable Finance and CSR, is responsible for delivering on our exchange's NZFSPA commitments. The team reports progress to the CEO and Executive Committee.

1.2 Exchanges should ensure that relevant policies, procedures and training are implemented to support its efforts

Policies and procedures

As part of our commitment to transitioning towards a more low-carbon and sustainable economy, we have been actively reviewing a set of relevant policies and procedures to align our operational efforts with our exchange-specific climate-related targets.

As outlined in our Climate Transition Plan below, our primary sources of greenhouse gas *(GHG)* emissions are staff commuting, business travel and purchased goods and services. To mitigate these emissions, in 2024, we revised our Car Leasing Policy to only include vehicles with a CO_2 emission rate of less than 50g/km. Additionally, we have implemented an official Travel Policy, which, with the help of a new travel agency, allows us to more effectively monitor and track emissions generated from business travel. In parallel, we are committed to managing and reducing our waste through our Waste Management Policy, which has been granted the Luxembourgish SuperDrecksKëscht label. We have also signed IMS Luxembourg's Zero Single-Use Plastic Manifesto whereby we pledged to eliminate the use of single-use plastic within our company.

In terms of other areas of our day-to-day operations, we also require our larger suppliers to sign a commitment letter on CSR, ensuring they have a robust environmental policy, among other sustainability objectives.[1]

Finally, we have established a procedure for the admission, display, and monitoring of sustainable securities on the LGX Platform, which has been in place since 2016.

This work will continue to be carried out over the course of 2025 with regular reviews and robust monitoring going forward.

[1] *This measure applies to suppliers who fall within the scope of circular 22/806 on subcontracting.*

Trainings to LuxSE employees

Education is at the heart of our mission as a market operator to ensure investor protection, and we are convinced that it plays an instrumental role in enabling sustainable finance to become mainstream. It is with this in mind that we launched the LGX Academy in May 2020 and began offering our employees access to the courses to systematically raise awareness and upskill their knowledge around sustainable finance, regardless of their role within the organisation in 2022.

We further developed this initiative in 2024 by offering the following courses to external participants as well as our employees:

- Updates on EU Sustainable Finance Regulatory Package
- Breaking Down Greenwashing
- Focus on Nature-Related Sustainable Bonds
- Emerging Markets & Sustainable Finance: concrete case studies
- ESG Funds
- Transition Finance

2 Emissions Reductions & Disclosure

CATEGORY 2 Exercise influence: Market-focused targets

2 Emissions Reductions & Disclosure

2.1 Exchanges should publicly disclose their climate actions annually as part of a transition plan

2.2 Exchanges should measure and disclose their Scope 1, 2 and (where material) 3 emissions annually

2.3 Exchanges should commit to Scope 1, 2 and (where material) 3 emission reductions for their own operations

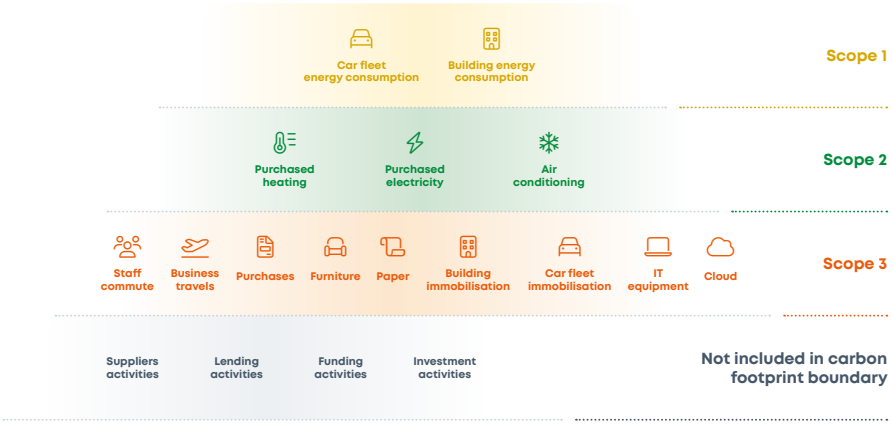
Our GHG emissions

Since starting to measure our carbon footprint in 2019, we have continued to track our progress and are now publicly disclosing our GHG emissions for the third time in our Sustainability Report, and for the second year in our Target Setting Progress Report.

To calculate our environmental impact, we have adopted the Greenhouse Gas Protocol *(GHG Protocol)*[2], a globally recognised corporate accounting and reporting standard, as a guideline to calculate our internal carbon footprint. The GHG Protocol is the most widely used international standard for quantifying and disclosing GHG emissions. The standard mandates that organisations report on at least their Scope 1 and Scope 2 emissions, with Scope 3 emissions reporting being optional. In line with our commitment to full transparency, we have chosen to measure and account not only our Scope 1 and Scope 2 emissions but also our significant Scope 3 emissions.

To do so, we use the "Estimate emissions" approach, meaning that we multiply activity data by the appropriate emission factors. Since 2019, we are using the emissions factors released by Base Empreinte from ADEME, the French agency for Ecological Transition.

When applied to our business, this means that our calculations cover the following:



KEY RESULTS	2019	2020	2021	2022	2023	2024	Δ 2024 VS. 2019
Scope 1 (tCO_2e)	101	62	61	59	22	17	-83%
Scope 2 (tCO_2e)	81	89	102	25	20	19	-76%
Scope 3 (tCO_2e)	679	410	377	637	695	627	-8%
Total number of FTEs	120	135	137	138	140	144	+20%
Total GHG emissions (tCO_2e)	862	561	541	721	736	664	-23%
Total GHG emissions per FTE	7.2	4.2	4.0	5.3	5.3	4.6	-36%

[2] *Emissions from IT equipment and furniture have been calculated in line with the financial amortisation to ensure coherence between sustainability and financial reporting. The approach used to compute these two categories follows the Bilan Carbone methodology.*

CATEGORY 1

Lead by example: Exchange-focused targets

1

Our carbon footprint measurements have all been certified by Energie et Environnement S.A., an independent Luxembourg-based consulting firm that supports companies measuring their carbon footprint. Since starting to measure our carbon footprint, we have been recognised as "carbon checked", and we are on a pathway to becoming "carbon optimised".

The "carbon checked" label recognises that we have calculated our carbon footprint according to the most rigorous international standards in the management of GHG emissions: PAS 2060 or the future ISO 14068. The "carbon optimised" label is granted to companies that, through all their decisions, apply decarbonisation initiatives.

Our GHG emissions reduction commitments as part of our Climate Transition Plan

As part of GFANZ, we have committed to reaching net-zero GHG emissions (Scope 1, 2 and 3) by 2050 at the latest, with an interim target by 2030 – from a 2019 baseline. Our emissions reduction targets aim to be consistent with a 1.5°C scenario and align with sectoral pathways where available to reach net-zero emissions by 2050 at the latest.

Our commitments:

1. **Reaching net-zero GHG emissions (Scope 1, 2 and 3) no later than by 2050**
2. **Reaching absolute zero Scope 1 GHG emissions by 2030 - from a 2019 baseline**
3. **Reducing our absolute Scope 2 GHG emissions by 75% by 2030 – from a 2019 baseline**
4. **Reducing our absolute material indirect emissions, Scope 3, by 10% by 2030 – from a 2019 baseline**

Our Climate Transition Plan

Our company has consistently led the way in incorporating sustainability into its operations. Our ongoing sustainability efforts were further strengthened with the launch of the LGX Platform in 2016. This commitment to sustainability is reinforced by our decision to join GFANZ and set targets aimed at achieving net-zero GHG by 2050 or earlier.

In 2019, we started monitoring our carbon footprint and integrated this metric into our key performance indicators. By then, our commitment to sustainability was already established, and our best practices were deeply embedded in our operations. As a result, the baseline we set in 2019 reflects our strong initial efforts to minimise our environmental impact.

We have already made significant reductions in emissions since 2019, and our emissions per FTE are notably low compared to our peers. This accomplishment underscores our continuous efforts and the impact of our sustainability initiatives. In 2023 and 2024, we developed a Climate Transition Plan to reach net-zero GHG emissions by 2050 at the latest with an interim target by 2030, looking at our highest emitting areas among our Scope 1, 2 and 3 in order to focus our efforts on those where we had the most impact and leveraging power. We commit to reaching Scope 1 absolute zero GHG emissions, to reducing our absolute zero Scope 2 GHG emissions by 75%, and to reducing our Scope 3 by 10% by 2030.

In setting our targets and defining our Climate Transition Plan, we have been careful to ensure its feasibility. We believe in making promises that we can keep, and in being transparent and accountable in our progress towards these goals. In June 2024, the transition plan was presented by our CEO and CSR team to all employees during a townhall together with our Sustainability Report.

Considering the ever-changing regulatory landscape surrounding sustainable finance and the recent establishment of criteria for credible transition plans, our Climate Transition Plan will continue to evolve to ensure compliance with the latest regulatory updates.

1

Our climate actions as part of our transition plan

From 2019 to 2024, our total GHG emissions decreased by 23%, from 862 to 664 tCO_2e and emissions per FTE dropped by 36%.

In 2023, businesses began to regain a sense of normality after the disruptions caused by the COVID-19 pandemic. Despite this return to business as usual, there was a conscious effort within our exchange to maintain the lower emission levels achieved during the pandemic.

In relation to our Scope 1 emissions, we revised our Car Leasing Policy in recent years with a significant step forward coming in 2024, when we decided to only include vehicles with a CO_2 emission rate of less than 50g/km. Our Scope 1 GHG emissions have thus decreased by 83% in 2024 versus 2019.

In relation to our Scope 2 emissions, we started powering our building's electricity entirely from renewable energy sources in 2014 and we have also implemented a conservative energy usage plan, which includes reducing the heating on our premises. These measures have decreased our Scope 2 emissions by 76% in 2024 when compared to 2019. Moreover between 2019 and 2024, our Scope 3 GHG emissions have been reduced by 8%.

As our Scope 1 and 2 GHG emissions are relatively low, we are mainly focusing our efforts on our Scope 3 material emissions, which are mostly composed of staff commuting, business travel and purchased goods and services.

Regarding staff commuting, we have implemented several initiatives to help our employees favour eco-mobility, including providing the possibility of working remotely up to two days per week. However, the effectiveness of these actions largely depends on broader external factors, including government mobility policies and infrastructure.

Considering these limitations, we have chosen to focus our efforts on what is within our control, notably our business travel emissions. In this respect, we have defined a Travel Policy. We will continue to proactively seek actions that enable emissions reductions based on market evolutions.

Regarding purchased goods and services, we are conducting an analysis to better understand their composition and identify decarbonisation opportunities.

We look forward to sharing our progress as we continue along this important journey toward a more low-carbon and sustainable future.

1 Transparency & Education

1.1 Exchanges should actively promote availability of high-quality climate information by producing guidance for issuers or undertaking initiatives that encourage climate-related disclosure (as may be relevant to the market)

Sharing expertise and guidance with the market

As the leading exchange for the listing of sustainable debt instruments and home of LGX, we aim to foster the market's development and the crucial role this area of finance plays in facilitating the shift towards a low-carbon and more inclusive economy.

In 2024, our management team and our experts participated in more than 80 conferences, panels and roundtables around the world, on topics including climate transition, sustainable bonds and the impact of regulatory reforms, notably:

- On 8 May, our CEO Julie Becker took part in a panel discussion on the geoeconomic race for net zero at the European Stability Mechanism *(ESM)* as part of a daylong workshop jointly organised by ESM and the World Economic Forum *(WEF)*.
- In October, our CEO Julie Becker delivered a keynote speech at the ESG Global Leaders Summit 2024 in Beijing focusing on the role of finance in securing a just transition.
- On 19 November, our Sustainable Finance Manager and lead LGX Academy lecturer Paul Chahine represented our exchange as a moderator of a panel discussion at Luxembourg for Finance *(LFF)*'s annual China Finance Forum on ways to speed up the progress to net zero.

Presence in the press:

- In October, our Head of Sustainable Finance Laetitia Hamon took part in a special roundtable discussion on the "Green Transition: From Diagnosis to Practice" organised by Paperjam Club in partnership with Pricewaterhouse Coopers *(PwC)* Luxembourg.
- In a special interview published on Spuerkeess' blog, our Head of Sustainable Finance Laetitia Hamon talked about "Climate Change: The Day-to-Day Challenges of Sustainable Finance".

2

We also participated in several podcast series during the year to use a new medium to foster awareness of climate action:

- Our Head of Markets & Surveillance Guy Weymeschkirch and Head of Sustainable Finance Laetitia Hamon took a deep dive into the role that stock exchanges play when it comes to gathering and disseminating data related to trading and sustainable finance as part of our Grand Dossier with Paperjam.
- Together with experts from Intercontinental Exchange *(ICE)* and NASDAQ, our Head of Sustainable Finance Laetitia Hamon set out to answer "Is ESG Dead?" in a panel discussion organised by John Lothian News.
- Following on from the announcement that we had been named 'Exchange of the Year' for the 7th time since 2017 at Environmental Finance's Sustainable Debt Awards, our CEO Julie Becker discussed our work in emerging markets and gender finance in an interview with the United Nations Sustainable Stock Exchanges initiative *(UN SSEi)*.
- In an episode of LuxCMA's Let's Talk About podcast series, experts including our Regulatory Affairs Officer João Garcia Da Calva explained the EU Green Bond Standard Regulation and unravelled its current state of play.

1.2 Exchanges should offer climate disclosure training at least annually

Delivering trainings to financial market players

In 2020, we launched the LGX Academy to provide sustainable finance training to professionals, students and the wider public, delivering courses to prospective issuers, law firms, private banks, external reviewers, audit firms, and other exchanges throughout the world in 2024 with the help of our expert lecturers.

For the fourth year since its launch, the LGX Academy continued to contribute to upskilling market participants with sustainable finance knowledge. Through in-house, tailor-made courses, different partnerships with training providers and capacity building missions in emerging economies, more than 500 individuals and entities benefitted from LGX Academy trainings in 2024.

Since its launch, the LGX Academy has seen strong growth in bespoke trainings including university lectures and has worked with recognised institutions to provide trainings at a national and international level.

Throughout the year, the LGX Academy also contributed to several sustainable finance courses organised with partner institutions.

LGX Academy experts also held several in-person tailor-made training sessions in Luxembourg:

- In July 2024, a comprehensive 16-hour course was designed for the staff of Luxembourg's Ministry of Finance to cover the essentials of sustainable finance.
- In February 2024, over the course of two days, we provided an 8-hour tailored training to Banco Bradesco.

We collaborated with Luxembourg's House of Training *(HoT)* within a number of different programmes:

- The HoT Advanced Course in Sustainable Finance, gathering participants from the Luxembourg financial sector.
- The HoT Agence de Transfert de Technologie Financière *(ATTF)* Programme, welcoming participants from Albania, Armenia, Azerbaijan, Bulgaria, Cabo Verde, Croatia, El Salvador, Georgia, Latvia, Mongolia and Vietnam.
- A mission to China with three trainings delivered to local financial market participants, one in Beijing, one in Shanghai and one in Zhengzhou.
- A 5-day training together with the International Capital Market Association *(ICMA)* Luxembourg and HoT for the "Capital Markets and Financial Instruments Certificate *(CAMFIN)*" gathering financial professionals joining from Ethiopia, Moldova, Cabo Verde, Egypt, Vietnam, Ukraine, Albania, Serbia, Romania, Bulgaria, Azerbaijan and Luxembourg.

Building capacity in emerging markets

In line with our mission to enhance the expertise in sustainable finance within emerging markets, the LGX Academy was notably active in these regions in 2024. By offering tailored courses designed to educate local market participants and public entities on various sustainable financial products and the issuance process, our experts played a significant role in capacity building in countries such as Cabo Verde, Thailand, Tajikistan, Bhutan, China and Mongolia.

Throughout 2024, we continued our efforts in capacity building and technical assistance programmes in emerging markets, benefitting from our strong partnerships with numerous international organisations, including the United Nations *(UN)*, the Global Green Growth Institute *(GGGI)*, and the International Finance Corporation *(IFC)*.

Following the launch of the "Global Trust Fund on Sustainable Finance Instruments" initiative in collaboration with GGGI, which aims to mobilise capital through the issuance of green bonds and other sustainable finance instruments, we provided our initial assistance services to several clients across Asia, Africa and Latin America. Since the inception of IFC's Green Bond Technical Assistance Programme *(IFC GB-TAP)* in 2018, our experts have worked closely with IFC to facilitate and contribute to a number of trainings within the programme.

In addition, on **19 June 2024**, experts from our exchange participated in a roundtable discussion on "Scaling Up the Mexican Green Bond Market", which was held as a pioneering event organised by the European Commission *(EC)* in collaboration with the Bolsa Institutional de Valores *(BIVA)*. This initiative brought Mexican companies to the forefront, engaging directly with EU investors.

- In **May 2024**, our experts travelled to Bangkok, Thailand to take part in a special session on how sustainable debt instruments can foster gender equality during the United Nations Economic and Social Commission for Asia and the Pacific *(UN ESCAP)*'s Feminist Finance Forum 2024.
- In **October 2024**, we enhanced our collaboration with IFC by being one of the six partners to launch the Sustainable Finance Knowledge Center for Francophone Africa. The six partners managing the alliance together with our exchange are IFC GB-TAP, the World Bank Compact with Africa Green Business Fund *(CwA-GBF)*, West African Development Bank *(BOAD)*, the Financial Markets Authority of the West African Monetary Union *(AMF-UMOA)* and SME Finance Forum. The objective of the Center will be to provide knowledge and skills to companies and financial institutions in Francophone Africa to support their sustainable finance journey.
- In **November 2024**, our experts travelled to Praia, Cabo Verde, to follow up on a 2022 mission with the Bolsa de Valores de Cabo Verde *(BVC)*. The visit focused on exploring strategies to grow the local sustainable bond market and advising BVC on adjustments needed to support this development effectively. These sessions, attended by issuers, investors, and public sector representatives, were facilitated by BVC with support from the Central Bank of Cabo Verde and the ATTF.

More details can be found in our **2024 Sustainability Report**.

2 Products & Services

2.1 Exchanges should work to raise visibility for climate-themed products

Raising visibility for sustainable securities

In 2016, we established the LGX Platform as a way of directly and concretely contributing to the goals set out by the Paris Agreement and the United Nations Sustainable Development Goals *(UN SDGs)*, making us the first exchange in the world to create a platform exclusively dedicated to sustainable securities.

The LGX Platform was the first of its kind to turn voluntary market standards into mandatory requirements for sustainable bonds and shed light on these securities under enhanced criteria of transparency.

This year again, we continued to promote the visibility of sustainable financial products and to fill the gaps in the market. We regularly increase the scope of our platform to include new sustainable instruments and continuously enlarge our services - launching the LGX Academy and LGX Datahub in 2020, and more recently the LGX Assistance Services to foster the growth and democratisation of sustainable finance.

In 2024, through securities displayed on the LGX Platform, LuxSE facilitated issuances that raised a total of EUR 262 billion for specific green and social projects and sustainable developments across the world, which constituted a 25% increase versus the previous year. In a growing sustainable debt capital market, we consolidated our leading position with a market share standing at approximately **42% in terms of volume issued** through internationally listed sustainable bonds (versus 37% in 2023).

As of 31 December 2024, the LGX Platform encompassed **3,767 securities**, which included 2,199 sustainable bonds, issued by 399 issuers in 45 currencies. The bond listing structure on the LGX Platform consisted of 1,131 green bonds, 218 social bonds, 728 sustainability bonds and 122 sustainability-linked bonds *(SLBs)*. There were also 1,568 share classes of funds classified as Article 8 or Article 9, as per the Sustainable Finance Disclosure Regulation *(SFDR)*.

Through the LGX Platform, we provide a clear and transparent pathway that enables asset owners and asset managers to find sustainable securities and their relevant documentation free of charge on our **website**. Being the first to translate industry best practices into mandatory requirements for admission on the LGX Platform, we set the bar high and aim to encourage issuers to lead by example.

2.2 Exchanges should incorporate climate-related considerations into the development processes for products and services

Our exchange currently has a Product Management Policy detailing the process that needs to be adhered to when it comes to developing and managing products and services. This policy is being reviewed to incorporate climate-related considerations in our products and services.

CATEGORY 2

Exercise influence: Market-focused targets

2

3 Policy Persuasion & Engagement

3.1 Exchanges should actively engage with local and global policy makers and standard setters to stay informed of and promote net zero aligned policies

Engaging with local and global policymakers and standard setters

- We maintain regular dialogues, including discussions on sustainable finance, with various local and international institutions and authorities, such as Luxembourg's Ministry of Finance, the European Commission *(EC)* and the International Organization of Securities Commissions *(IOSCO)*. The European Commission's high-level expert group *(HLEG)* on scaling up sustainable finance in low-and middle-income countries, of which our Head of Sustainable Finance Laetitia Hamon is an appointed member, released its final report in April 2024, outlining 10 concrete recommendations for the Commission to follow to achieve its goal of fostering sustainable finance in new regions.

Throughout the year, by participating in local, European and international associations, working groups and task forces, we continued to contribute to market developments with the goal of making capital markets more sustainable and society more inclusive. In parallel, we held important dialogues with local and global actors and institutions.

At local level, entities such as:

The Association des Banques et Banquiers, Luxembourg *(ABBL)*, the Luxembourg Capital Markets Association *(LuxCMA)*, the Luxembourg Finance Labelling Agency *(LuxFLAG)*, the Association of the Luxembourg Fund Industry *(ALFI)*, the Inspiring More Sustainability *(IMS Luxembourg)*, Luxembourg for Finance *(LFF)*, and the Luxembourg Sustainable Finance Initiative *(LSFI)*.

At a European Union and international level, entities such as:

The International Capital Market Association *(ICMA)*, the Federation of European Securities Exchanges *(FESE)*, the United Nations Sustainable Stock Exchanges *(UN SSE)* initiative and the World Federation of Exchanges *(WFE)*, Glasgow Financial Alliance for Net Zero *(GFANZ)*.

Our climate advocacy

Throughout the year, we engaged with local and international policymakers, standard setters and organisations to promote climate-related actions and policies. We participated in several working groups dedicated to climate and publicly advocated for climate action, notably with ICMA and UN SSE on climate transition related topics.

3.2 Exchanges should work towards mandatory climate-related disclosure in their markets

Mandatory sustainability disclosure on the LGX Platform

By turning voluntary guidelines and industry best practices into mandatory requirements for sustainable securities displayed on the LGX Platform, we help advance sustainability disclosure in the market.

To be featured on the platform, a bond must be self-labelled as green, social, sustainability, or sustainability-linked (collectively known as sustainable bonds) as specified in the legal documentation. For green, social and sustainability bonds, the bond's proceeds must be allocated to green, social, or sustainability projects as outlined in the framework. For SLBs, the legal documentation must clearly define the Key Performance Indicators *(KPIs)* and Sustainability Performance Targets *(SPTs)*.

An external review of the framework *(Second-Party Opinion)* should be provided at pre-issuance, and the issuer must commit to producing a post-issuance allocation report.

3.3 Exchanges should proactively engage with market participants, including through market awareness programmes, to promote the adoption of net-zero commitments and transition plans among market participants

Our support to issuers and investors on transition finance

As a market operator, we believe we have a crucial role in shaping capital markets to better support the transition of our economy towards a more sustainable model. As part of our commitment to GFANZ, we actively engage with issuers and other market participants to encourage the adoption of net-zero commitments and transition plans. Our goal is to extend our focus beyond sustainable bonds by assisting entities to start their sustainable finance journey and transform their business models.

As a first concrete step, in 2024 we organised a training course through the LGX Academy that focused on transition finance. The objective of the training was to help market participants, including our issuers, acquire the necessary knowledge and capabilities to adopt net-zero commitments and build their transition plans. For more information, please visit the LGX Academy webpage.
