

Self Blood Glucose Monitoring Using Performa Glucometer

Setting Up Your Lancing Device

Step 1:

Each Lancet drum contains 6 sterile lancets

Pull off the cap directly. Do not twist the cap while pulling.

Insert the drum with the white end first into the lancet device, until a click sound is heard

Recap the lancet device. Ensure that the notch on the cap is aligned with the notch on the device.

Step 2:

Adjust the lancet depth. Usually,

- For females: 1mm to 2mm
- For males: 2mm to 3mm

Step 3:

Slide the lever over and back once to replace a new lancet for your next blood glucose test

Step 4:

Remove the drum after the last lancet is used. "6" refers to the first needle, "1" is the last needle left.

Step 5:

Dispose used SF Lancet into a hard container with a cap.
