MEDICAL NECESSITY AND ICD-10 CODES Medicare (and, increasingly, other insurers) will only pay for services that are reasonable and necessary for the diagnosis and treatment of the patient. The physician must specify an ICD-10 diagnostic code to indicate the medical necessity of each test requested. Medicare and other carriers may not pay for screening tests or tests that are not FDA-approved. If there is reason to believe that a carrier will not pay for a test, the patient should be informed and asked to sign an Advanced Beneficiary Notice (ABN) indicating acceptance of responsibility for the cost of the test if the carrier denies payment.
