

Referral Guide

Brain Tumor Center

The UCSF Health Brain Tumor Center offers leading clinical expertise, pioneering diagnostic and treatment advances, and unparalleled support for patients, caregivers and families. By integrating research and clinical trials into every aspect of care, our center is at the forefront of pursuing novel ways to advance personalized therapies that optimize patient outcomes.

Why Refer to UCSF Health?

- **A dedicated immunotherapy program** working in collaboration with the UCSF Living Therapeutics Initiative to accelerate the development of promising new treatments
- **Extensive clinical trials** that provide patients with unique treatment opportunities beyond the current standard of care, with 30 research laboratories focused on developing new brain tumor treatments
- **Groundbreaking treatments** such as awake glioma surgery, focused ultrasound, laser interstitial thermal therapy (LITT), and endoscopic and transsphenoidal surgery
- **Gene therapy**, including a new CAR T-cell therapy powered by novel UCSF technology that protects healthy tissue and enables more effective treatment
- **Pioneering diagnostic approaches** like genomic sequencing using the UCSF500 Cancer Gene Panel to develop targeted, personalized therapies
