Introduction

WellSpan aims to be a catalyst for community change by collaborating with partners to address the social, demographic, behavioral, and economic issues facing our neighbors and communities. We know we can't do this alone. That's why we work with our friends and neighbors throughout the region to identify community health needs and address them.

The 2022 Community Health Needs Assessment provides insight on the health of our communities, from birth through advanced age, across the WellSpan Health five county region, including Adams, Franklin, Lebanon and York Counties as well as geographic regions within Lancaster County. This report summarizes the data findings in the Community Health Needs Assessment, providing the foundation for which WellSpan builds our Community Health Improvement Plan.

The Community Health Needs Assessment identifies community health needs based on the prevalence of health risks, health

disparities, and disabling conditions, including their precursors and the social contexts. It focuses specifically on health risks that contribute to the noncommunicable diseases that are among the leading causes of death and disability with some emphasis on how these risk factors are unevenly distributed across demographic groups.

This report equips decision makers with local and regional data, provides insight on emerging, trending and ongoing health related needs of our community, and aims to inspire impact-driven solutions to improve the health of our community.

The COVID-19 public health emergency created a plethora of unprecedented implications that will likely result in lasting shifts in community health. The timing of our assessment warrants a consideration of the impact of COVID-19 as well as an opportunity to pause and consider the impact of health disparities, health equity, and the social determinants of health. As such, we enhanced our Community Health Needs Assessment process in a number of ways to ensure inclusivity of our process and expand data sources. The richness of our process and acknowledgment that the pandemic has impacted our community will help shape the design and focus of the 2022-2025 WellSpan Community Health Improvement Plan.

The needs identified throughout the Community Health Needs Assessment present an opportunity for WellSpan to continue our relentless pursuit of finding a better way. In partnership with you, WellSpan can improve health through exceptional care for all, lifelong wellness, and healthy communities.

Previous Community Health Improvement Plan and Needs Assessments can be found [online](#).

The pages that follow demonstrate the methodology, findings and analysis of our assessment.

This report is co-authored by WellSpan Health and the Center for Opinion Research at Franklin and Marshall College.

Overview

The purpose of a Community Health Needs Assessment is to understand the key health related challenges that communities face, identify the assets and gaps in resources available throughout the community that promote health and wellness, and to ensure community organizations, including healthcare, are equipped with the background needed to take action on key community health needs. The data included in this community health assessment primarily focus on individuals, the incidence and prevalence of specific conditions, attitudes, and behaviors present within the local community, but such data represent only part of the story. There are multiple influences on community health and multiple barriers to health improvement. Identifying, documenting, and addressing these multiple influences and barriers are as necessary for improving a community's health as is understanding individual-level data. This means that communities must address multiple factors impacting health through policy interventions that emphasize the interaction between individual characteristics and environmental context. For example,

efforts to educate people on the importance of exercise will do little to change behaviors if people lack safe, affordable, and accessible places to exercise.

Death and Disability

The leading causes of death and disability have changed markedly over the past century. In the United States today, the leading causes of death are all non-communicable diseases: heart disease, cancer, and chronic obstructive pulmonary disease. Compare today's causes of death to 1900, when infectious diseases like pneumonia, influenza, and tuberculosis accounted for most mortality. Improvements in sanitation and hygiene, vaccinations, and the emergence of antibiotics helped reduce infectious disease, in turn leading to increases in longevity and decreases in infant mortality.

Reducing death and disability from chronic disease is likely best approached similarly to the way the public health sector attacked the problems of infectious disease; i.e., through interventions aimed at society as a whole and not solely at individuals. A public health

approach defined infectious disease as a community problem and it would be wise to define non-communicable disease as a community problem as well.

Chronic Conditions

Chronic, non-communicable diseases pose a tremendous health burden throughout the world, but it is not only death that matters. We are also interested in disability. Long-term health risk and disability can be quantified by calculating something known as disability-adjusted life years. Disability-adjusted life years (DALYs) calculations provide an estimate of the burden of disease by assessing premature mortality and disability, thus providing an overall view of the most important contributors to health loss. In the United States, the leading causes of DALYs are the non-communicable diseases mentioned earlier: heart disease, lung cancer, chronic obstructive pulmonary disease, accidents, diabetes, and major depressive disorders. But focusing primarily on these diseases emphasizes treatment, not root causes and prevention, and will do little to reduce lives lost and disability.

Social Determinants of Health

Prevention of lifestyle diseases has historically focused on trying to change individual behavior and choices and has focused on the individual and their personal responsibilities, though research shows how influential physical and social surroundings are on individuals' actions. Context and environment shape decision-making processes that impact health. Research suggests that altering environments may be an effective driver of behavior change. Intentionally designing environments and policies, in terms of both public laws and organizational practices, to promote healthy behaviors holds promise to reverse the increase of lifestyle diseases. Today, we often refer to the complicated web of environmental, social and community factors that influence health as the social determinants of health. By understanding the impact of the social influences on health, such as housing and food security, we can address the root causes of poor health outcomes while also building strength within our community.

Access to Healthcare

According to the World Health Organization, health means achieving “a state of complete physical, mental and social well-being and not merely the absence of disease.”

In healthcare, this means an emphasis on prevention, management and quality care provided to patients at the right time to optimize wellness. A core component of the needs assessment has always been to consider gaps in healthcare access, including affordability and availability of care.

Behavioral Health

The incorporation of behavioral health into medical models that address community health has amplified the significance of mental well-being and resiliency in our communities. Today, as our communities continue to struggle with the effects of the COVID-19 pandemic, more and more evidence speaks to the enormity of behavioral and mental health challenges our community members face throughout their lives. Evolving understanding of the influence of trauma, discrimination, grief, depression and anxiety on physical health conditions has allowed us to deepen our perspective of wellness and community resiliency.

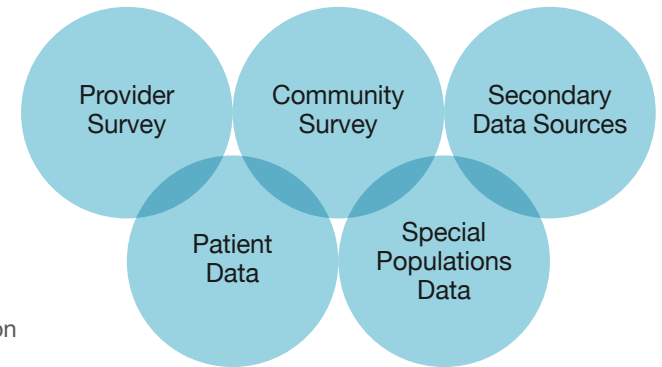

Instead of focusing on specific conditions, the data gathered in this Community Health Needs Assessment identifies the risk factors that lead to certain health conditions and create the most premature death and disability. In the United States and Pennsylvania today, those behaviors include dietary risks, smoking and alcohol use, and high body mass index. Each contributes to cancer, cardiovascular and circulatory disorders, chronic respiratory diseases, and diabetes. Understanding how many county residents smoke, drink, get insufficient physical activity, and who do not eat properly and maintain a healthy weight helps us understand how many area residents are exposed to significant long-term health risks. Interpreting these behaviors in the context of demographic and psychosocial characteristics helps WellSpan prioritize and focus efforts to improve community health.

Data Elements and Data Sources

WellSpan's 2022 Community Health Needs Assessment leveraged data from multiple data sources, including:

- 1. WellSpan Health Patient Data:**
Extracted from our Electronic Health Record (EHR, Epic), this de-identified aggregate data provides specific perspective on the health and well-being of WellSpan patients. This data source allows us to reinforce learnings at the local and national level by understanding consistencies among our patient population. Additionally, this data allows us to identify attributes that are unique to our patients.
- 2. WellSpan Health's Provider Survey:**
Created by an interdisciplinary team of physicians and leaders, this survey was administered to all physicians and advanced practice providers (like Physician Assistants, Nurse Practitioners, etc.). With a 30% response rate, the survey offers insight on the provider community's concerns about community health and proposed strategies for improvement.
- 3. Local, State and National Data Sources:** Leveraging the support of our consultant at Franklin & Marshall College, secondary data from local and state sources such as the Department of Health and Behavioral Risk Factor Surveillance Survey were extracted.
- 4. Representative and Special Populations Community Survey:**
Building on survey instruments used in previous Community Health Needs Assessments, an online and telephonic survey that is action-oriented and impact-focused was developed and administered in English and Spanish. The representative survey demonstrated the demographic distribution of the community broadly, as defined by secondary sources like the US Census Bureau. The Special Populations Survey was distributed through local health coalitions in each county and community partners in order to engage additional community members in our survey data collection, including racial ethnic minority groups who tend to be underrepresented.
- 5. Special Populations Data Collection:**
In addition to our routine data collection methods, which provide a community-wide perspective of strengths and challenges, a Plain Community Survey, focus groups and key informant interviews, and off-cycle exploratory data collection have permitted an opportunity to learn about groups within our community who have been marginalized and underrepresented in similar assessments.

Data Collection Process

The data collection methods of the 2022 Community Health Needs Assessment built on foundational work from previous WellSpan Community Health Needs Assessment processes and were expanded to be more inclusive and innovative. Data collection was facilitated by the Center for Opinion Research at Franklin and Marshall

College, led by Berwood Yost, director of the Center and project consultant for the 2021 Community Health Needs Assessment. Data collection started in the spring of 2021 with an analysis of demographic indicators from secondary data sources. Simultaneously, the engagement of key stakeholders and subject matter experts helped to frame core areas of focus for further exploration. Primary data collection, such as the community survey and

WellSpan Health's Provider Survey, allowed for a deeper understanding of community health needs with an action-oriented focus.

The WellSpan Health Provider Survey launched in November 2021 and remained live for responses until February 2022. The community survey, which can be found in Appendix 2, was launched in early February 2022. A notable finding through the interviewing process was the anecdotal feedback from interviewers. The interview, which was designed with the expectation of taking a respondent 15-20 minutes to complete, took an average of 34 minutes. Interviewers reported the perceived reasons for the longer interview times was linked to the enormity of the trauma and desperation they were hearing through telephonic interviews. Interviewers reported respondents shared their emotional challenges managing through the pandemic and some required additional resources.

With a desire to gain a deeper understanding of our communities, WellSpan initiated a new, Special Population Community Survey which was distributed through WellSpan and our local health coalitions' contacts and partners with a desire to collect a greater number

of survey responses from racial ethnic minority groups, low-income individuals living in poverty and families. The survey, administered online, yielded 1445 responses.

Though not included in our Community Health Needs Assessment Report, a Plain Community survey is currently underway. Ongoing qualitative focus groups and key informant interviews continue to add focus and direction for action. WellSpan subject matter experts helped develop this plan due to its added relevance and alignment to the strategic organizational direction.

The three year cycle that we follow for the completion of the Community Health Needs Assessment provides ample opportunity to explore findings during "off-cycle years." As such, planning for further exploration of community members who speak languages other than English and Spanish is currently underway for off-cycle relationship building and data collection.

Respondents

County	Community Survey		Special Populations Outreach Survey	
	Amt	Date Conducted	Amt	Date Conducted

York	886	Jan-Mar 2022	562	Feb-Apr 2022
Total	1901	Jan-Mar 2022	1445	Feb-Apr 2022

Acknowledgment of Limitations

WellSpan has evolved its Community Health Needs Assessment process over time and remains committed to ensuring data integrity and a sound scientific approach. Nevertheless, there are limitations to our process. We have minimized the risk of incomplete or inaccurate data whenever possible but remain cognizant of the following limitations:

1. **Lagging Data:** Utilizing secondary data sources means embracing the limitations of those sources. For example, data may not be reported within the last year, may lack statistical significance for specific subgroups of the community and may not update the indicator for a year or more.
2. **Internal Patient Data:** Utilizing WellSpan patient data may have an inherent bias of not including those who cannot afford care and are therefore not captured in our records.
3. **Survey Sample Sizes:** For a variety of reasons, we are not able to survey every member of our community. Though we maintain a commitment to a statistically significant sample sizes, our sample sizes may limit our ability to draw conclusions about certain subsets or very specific groups of the community. Additionally, there is always an inherent bias in survey respondents due to the time and internet or phone connectivity required to complete the survey. Individuals who lack internet or phone access would lack access to this survey and are not represented.

Our health system and community experienced great hardships over the past couple years due to the pandemic. The enormity of the COVID-19 impact warrants a realistic approach to addressing community needs in an outcomes-focused manner. This is an unprecedented time and our communities have not yet recovered from the intensity of the pandemic's influences. The full impact of COVID-19 is not yet known and continual attention to metrics and indicators that tell our communities' stories will be

critical. We will continue to advance ongoing efforts that promote healthy living, collaborate with partners to address issues important to each local community, and monitor emerging trends that may warrant action in the future.

County-Specific Needs and Trends

WellSpan retains a commitment to understanding the unique needs of each county within our regional footprint- including Adams, Franklin, Lancaster, Lebanon and York counties. The health needs of southcentral Pennsylvania are largely similar to those of the state and nation, however unique attributes and community challenges provide ripe opportunities for action at the local level.

County Health Rankings

The Robert Wood Johnson Foundation's County Health Rankings which ranks all 67 counties within Pennsylvania based on health behaviors, clinical care, social and economic factors, and physical environment, provides an opportunity to study county level attributes. These rankings allow for comparison of counties within our region and with counties across the state. The rankings focus on two sets of indicators, Health Outcomes and Health Factors, and include measures associated with length of life, quality of life, health behaviors, clinical care, social and economic factors, and physical environment. The movement of counties in the rankings are reflective of both their

own improvement or decline as a county, as well as the improvement or decline of other counties in comparison. Movement in the rankings is not exclusively attributed to the efforts of each county to address health needs.

The County Health Ranking findings demonstrate little improvement over time in the counties served by WellSpan. (Table 2) In a few notable areas, the counties within the WellSpan footprint perform worse than the state. A few areas for improvement based on state level comparisons include:

- Adult smoking rates
- Adult obesity
- Adequate access to locations for physical activity
- Teen births (with exception of Adams County)
- Ratio of the population to primary care physicians
- Ratio of the population to dentists
- Ratio of the population to mental health providers
- Adults with some post-secondary education
- Air pollution (average daily density of fine particulate matter)
- Percentage of workforce that drives alone to work

Survey Findings

Comparing the county-level survey indicators to the indicators from the prior community health needs assessment survey finds that most comparable indicators have changed little. The primary change across all of these counties seems to be that residents were less physically active in 2022 compared to prior years. The primary county-level differences on the Community Health Needs Assessment indicators related to having insurance coverage and COVID vaccinations. Table 1 presents Community Health Needs Assessment survey indicators for each county and a comparison to data collected in each county's most recent Community Health Needs Assessment.

Unique County Findings

Differences among our geographic communities often do not demonstrate as significant a difference as observed in attributes such as race/ethnicity, gender, age, income and the experience of depression, trauma or discrimination. In some circumstances however, unique attributes identified from our Community Health Needs Assessment data specific to each county point to obvious areas for improvement. This information is important as WellSpan anticipates the implementation of the 2023-2025 Community Health Improvement Plan.

The complete breakdown of statistically significant differences among indicators can be found in Table 1 on the next page.

Table 1. Community Health Needs Assessment Survey Indicators by County and Previous Community Health Needs Assessment.

Indicator	Adams		Franklin		Lancaster		Lebanon		York	
	2017	2022	2019	2022	2018	2022	2018	2022	2017	2022

*Representing WellSpan's footprint, largely concentrated in northern Lancaster County.

Overall County Health Rankings

Adams County

Adams County is home to roughly 102,470 community members with a median household income of \$67,253 and 7.8% of the community living in poverty. Gettysburg typically represents the urban center of Adams County where poverty is slightly more concentrated. Racial ethnic diversity in Adams County, consisting mostly of Hispanic/ Latino community members, is observed the most north of Gettysburg in the rural areas of Biglerville, Aspers and York Springs. The median age of residents in Adams County is 43.9 and roughly 19.8% of residents are over the age of 65 (higher than the state with 17.8% of state residents being over 65). Both the median age and the percent of residents over 65 are higher in Adams County than all neighboring counties. The majority of housing units are owner occupied (78.0%) and the median value of homes exceed the state, Franklin County, Lebanon County and York County median value (\$205,800).

Adams County ranks #11 in the Robert Wood Johnson's County Health Rankings, scoring #11 in Health Outcomes and #9 in Health Factors. Comparatively, this makes Adams County one of the healthier counties in our region, but data shows that Adams County residents have health issues strongly associated with obesity and associated indicators such as poor eating, a lack of physical activities, and poor mental health.

Data shows that health literacy and social and emotional supports are an issue for some residents. Additionally, Adams County has the lowest rate of households with broadband internet access (40%). On the other hand, health access and substance use, smoking, and binge drinking do not appear as a significant problem in this community.

In Adams County, compared to our previous Community Health Needs Assessment, fewer people responding to the 2022 survey said they received the emotional support they needed or participated in any strength training, while more are overweight or obese.

Compared to respondents in the neighboring counties, more Adams County residents report in the recent survey that they have health insurance (96%), though fewer residents reported having a routine check-up within the last 12 months (84%). More residents than the neighboring counties reported having a high deductible health plan (28%). Adams County residents are less likely to have seen a dentist within the last year (66%) with lack of dental insurance being the common reason why, and more than a quarter of residents (26%) reported one or more economic hardships.

Franklin County

There are roughly 154,147 community members who call Franklin County home. Franklin County's median household income of \$63,379 is very comparable to the Pennsylvania median (\$61,744) but trails the median income of Adams, York and Lancaster Counties. Franklin County has fewer community members living in poverty (9.3%) than the state, Lancaster, Lebanon and York counties. The urban centers of Chambersburg and Waynesboro demonstrate the highest concentrations of poverty within Franklin County as well as the most racially and ethnically diverse geographic areas. Franklin County's median home value (\$180,400), median monthly rent (\$883) and the owner-occupied housing rate (60.6%) are very resemblant to the state overall (\$180,200, \$938 and 60.1%, respectively) and are consistent with other counties in the region.

Franklin County ranks among the highest in the region in the Robert Wood Johnson's County Health Rankings, including #12 overall for Health Outcomes and #18 overall for Health Factors. Franklin County residents' health issues are strongly associated with obesity and associated indicators such as poor eating, a lack of physical activities, and poor mental health.

Economic hardships and current depression are a bit more pronounced in Franklin County than other counties surveyed in WellSpan's 2022 Community Health Needs Assessment. COVID impact on mental health and family finances are higher. The suicide death rates have increased in Franklin County (as well as York County) and nearly half (47%) of residents report being affected negatively by grief, loss and burnout. Finally, every school district within Franklin County is demonstrating rising economic disadvantage among school age children and 11% of Franklin County children 0-6 years are uninsured. Roughly 1 in 4 Franklin County residents report living payday to payday while 71% report having enough money to go beyond each payday.

On a positive note, health access and substance use, smoking, and binge drinking do not appear to be significant problems for people living in this community compared to other counties surveyed. These indicators for Franklin County were stable compared to the prior Community Health Needs Assessment.

Northern Lancaster County

WellSpan's footprint in Lancaster County is largely concentrated in the northern areas of the county, including New Holland, Ephrata, Denver and Lititz. Racial ethnic diversity is very limited in this region, though there is a strong presence of Plain community members, including Amish and Mennonite. The Young Center at Elizabethtown College estimates that Lancaster County is home to nearly 42,000 Amish community members and many reside in rural northern Lancaster County. This Community Health Needs Assessment focuses on the WellSpan footprint in Lancaster County, though Lancaster City (which is typically considered to be out of our primary service area) is the urban center for the county and demonstrates more racial/ethnic diversity and more poverty than the remainder of the county. Lancaster County also has more foreign born persons (5.9%) than the neighboring counties. Lancaster County overall represents the largest county within the region (540,999), with the highest median home value (\$209,400), rent (\$1,009) and median household income (\$66,056). Lancaster County also has a lower median age (38.6) compared to the neighboring Adams, Franklin, York and Lebanon counties and observes the most significant increase in educational attainment levels regionally.

Lancaster County ranks the highest within the WellSpan footprint in the County Health Rankings at #9 overall. Lancaster is highest on health outcomes (9th out of 67 counties), length of life (8th), quality of life (9th), and health behaviors (8th). Despite this, secondary data for the entirety of Lancaster County demonstrates a higher rate of uninsured adults (11.7%) than all neighboring counties, the state, and the nation and 20.8% of children 0-6 years old being uninsured in Lancaster County (more than four times the state average of 4.6%). Lancaster County has more community members speaking languages other than English compared to its neighboring counties. Lancaster County also has the highest number of homeless youth, children eligible for free or reduced school lunch, and individuals receiving WIC benefits.

Residents of northern Lancaster County are, like the residents of other counties in WellSpan's service area, primarily dealing with health issues associated with obesity and associated indicators such as poor eating and a lack of physical activity, and poor mental health. Health access issues, substance use issues, and resistance to COVID-19 vaccinations are a bit more pronounced here than in the other counties. The only significant change in the northern-Lancaster County data since the previous Community Health Needs Assessment was a decrease in residents who participate in regular physical activity, notably strength training.

Lebanon County

As the geographically smallest county within the WellSpan footprint, Lebanon County is home to 139,729 community members, demonstrates the lowest median household income (\$60,281) compared to Adams, Franklin, York and Lancaster counties and also trails the median household income for the state (\$61,744). The poverty rate has increased in Lebanon County since 2019 and there are more children living in poverty than in the surrounding counties (16.5% of children). Lebanon County has the lowest median home value (\$171,300) and rent (\$874) within the region and trails the state in both rates. Lebanon City represents the urban center of the county, where much of the racial ethnic diversity is concentrated. Lebanon County has been noted for its increasing diversity, with pronounced growth in the number of Hispanic or Latino community members residing there. Approximately, 43.7% of the Lebanon County population is Hispanic or Latino, a percentage that exceeds all neighboring counties as well as the state. The median income for White and Hispanic or Latino community members has increased in Lebanon County, though the median income for Black or African American households has decreased over the last few years.

The 2022 County Health Rankings have ranked Lebanon County the lowest (#27 overall) within the WellSpan footprint. Lebanon County ranks high in clinical care (13th) and is the second highest ranking in clinical care for the region (York is ranked #8). The County Health Rankings consistently rank Lebanon poorly based on the air quality concerns of the county. Notably, Lebanon ranks 65th out of 67 counties on physical environment. The geographic composition of the county is largely responsible for the poor air quality (much of the county is a valley).

The 2022 community survey shows Lebanon County residents' health issues are strongly associated with obesity and associated indicators such as poor eating, a lack of physical activity, and poor mental health. Health access and substance use, smoking, and binge drinking do not appear as a significant problem in this community and economic concerns are a bit less pronounced. Lebanon County adults were less physically active (less exercise or weight training) and more likely to report experiencing any depressive symptoms since the last Community Health Needs Assessment.

York County

As the largest WellSpan service area, York County is home to roughly 445,565 community members and demonstrates a 3% growth in total population since 2011. The median age in York County (41.0) is higher than the state and the nation and comparable to the neighboring counties. York County is among the most racially and ethnically diverse counties within WellSpan's footprint with 6.5% of the community identifying as Black or African American, and 5.3% identifying as Hispanic or Latino. The median home value (\$177,100) and median rent (\$957 monthly) are comparable but slightly lower than the state, Adams, Franklin and Lancaster counties. York County includes the urban city center of York City as well as a smaller urban center in the western part of the county, in Hanover. The distribution of diversity extends from its highest concentration in York City, out to the suburban areas around York City such as Red Lion, Manchester and Mount Wolf. The median household income in York County is \$66,457, which is higher than the state (\$61,744) and Franklin and Lebanon Counties. Roughly 9.6% of community members in York County are living in poverty, a percentage which is lower than the state.

The 2022 County Health Rankings rank York County as 24 overall, compared to 19th in 2021. Notably, York ranks 8th in clinical care, the highest ranking in the region. The physical environment ranking, including air pollution, housing challenges, the number of commuters to work and drinking water violations, places York as 50th. Of additional concern, per capita assaults by guns in York City remain high and exceed other counties in the region as well as other cities of comparable size. Drug induced death rates and suicide death rates have increased in York City from 2010-2019.

The 2022 community survey shows York County residents' health issues are strongly associated with obesity and associated indicators such as poor eating, a lack of physical activity, and poor mental health. York residents seem to have better attitudes toward COVID vaccines than residents of other counties. York County adults also reported they were less physically active (less exercise or weight training) and were also less likely to report one or more economic hardships since the 2018 Community Health Needs Assessment.

York County's indicators related to health insurance coverage demonstrate a strength in the community, with only 5% of the community being uninsured and only 3.2% of children 0-6 years old being uninsured, both percentages which are superior to the region, state and nation. York County is also observing a shift in employment industries with movement away from manufacturing and into health care and social assistance. Children in York County have the least access to high-quality Pre-K (11%) compared to the neighboring counties and the state.

Secondary Data Findings

The issues identified in the previous Community Health Needs Assessment, access to healthcare, behavioral health and wellness, and the importance of the social determinants of health, on health outcomes, remain the primary public health issues confronting residents of WellSpan's communities. Widespread trauma and rising rates of mental health challenges like anxiety and depression stand out as consequences of living through a pandemic and have negatively impacted the health and wellbeing of our communities. Data from a variety of sources, presented below, confirms these priorities.

Our population is growing slowly and the richness of our communities' diversity is geographically concentrated, often in our urban centers. Primary data collection findings described later in the report will help to better understand health needs among diverse populations. Secondary data shows that health access is a real issue in Central PA, especially in Franklin and Lancaster counties. Part of this comes from having too few healthcare professionals and part of this is a high rate of uninsured Blacks and Latinos community members. Slow population growth means we have an aging population, underscoring the importance of prevention behaviors. Social determinants indicators point to trends that will likely affect well-being and the risks for vulnerable groups.

- One significant access issue for these counties is a lack of insurance among Blacks (generally twice as high as among whites) and Latinos (generally three to four times as high as among whites). Notably, Franklin, Lancaster, and Lebanon counties also have high rates of uninsured kids.
- Corresponding to the insurance issue is the sizable income inequality by race and ethnicity within these communities. Blacks and Hispanics have significantly lower median household income than Whites in all WellSpan counties ([Fig 1](#)). This truth may be less noted locally because all of the WellSpan counties are predominantly white and not very diverse demographically.
- There is a higher concentration of poverty in the region's urban centers including Chambersburg (Franklin County), Lebanon City and York City, where there also tends to be higher concentrations of racial and ethnic minority groups, including Black/ African American and Hispanic/Latino.
- The local population continues to age. In all counties, the population under 10 years of age is declining and in most counties the population under 20 years of age is declining. The aging of the population reflects the fact that there is relatively little in-migration from other parts of the United States.
- Housing costs are a significant issue in many counties, with, on average, more than one in five (19%) homeowners and about one in two (46%) renters having severe financial stress from their housing costs ([Fig 2](#)).
- Social factors related to aging and single parenthood exacerbate social determinants issues. Increasing shares of the population are over 65 years of age and living alone or are single females living with children ([Fig 3](#)).
- Overweight and obesity are too high among children, according to data collected by the state ([Fig 4](#)).
- Free and reduced lunch rates, an indicator of economic disadvantage with social determinants of health consequences, are rising in most every school district and are extremely high in some areas ([Fig 5](#)).
- Death rates have surged as a result of COVID-19 ([Fig 6](#)).

Data Overview

All data in the tables below are extracted from Census Bureau American Community Survey (ACS) 1-year and 5-year estimates, except where noted. Since all ACS data is survey based, all of the estimates provided in this report are subject to sampling error. This report uses ACS 5-year survey estimates whenever possible because the data has larger sample sizes, which produces more precise estimates due to smaller sampling error. When population subgroups are particularly small, readers are reminded that large year-to-year changes in the estimates may be a result of sampling variability. All monetary values in the tables are expressed in 2019 inflation-adjusted dollars, using the CPI index for all urban consumers.

A. Health Care Access Statistics

Health Insurance Coverage

Health coverage rates have increased in Adams, Franklin, Lebanon, Lancaster, and York Counties for most groups – with the exception of the Latino population in Lebanon County. Notably, Franklin, Lancaster, and Lebanon Counties had a much higher rate of young children who are uninsured than the state and the nation ([Table 3](#)).

Deaths

Drug-induced death rates have increased from 2010 to 2019 in Lancaster and York Counties (rates for the other counties were not available). Suicide death rates have increased in Franklin and York Counties, and have stayed the same in Lancaster County (data unavailable for Adams and Lebanon Counties) ([Table 4](#)).

B. Population Statistics

Total Population

Franklin, Lancaster, Lebanon, and York's populations have grown at a faster rate than that of the State (Adams population change matches that of the State at 1%). The growth rate for the United States is 6%, none of our counties are as high as that rate. ([Table 5](#))

Population Shares by Age

All five counties have higher shares of older population ages 85 and over compared to the state and the nation. The median age in Adams, Franklin, Lebanon, and York Counties is higher than that of the state and the nation. ([Table 6](#)).

Share of Population by Race and Ethnicity

The population shares of minority groups in Adams, Franklin, Lancaster, Lebanon, and York Counties has been decreasing or staying the same. White persons continue to comprise over 90% of the population in all five counties ([Table 7](#)).

Internet Access

Nearly all households in all five counties have access to broadband internet, while only about half of households actually have broadband internet. Adams County has the lowest rate of households with broadband internet with 40% ([Table 8](#)).

Language

Over 90% of households in Adams, Franklin, and York Counties speak only English. About 87% of households in Lebanon County speak only English, and about 83% of households in Lancaster County speak only English. These rates are lower than that of the state and nation (in all but Lancaster County, which is similar to the rates of the State). The most common second language spoken for all counties is Spanish or Spanish Creole ([Table 9](#)).

C. Income Statistics**Household and Family Income**

Incomes in all five counties have been increasing in recent years, even after adjusting for inflation. The highest income households in Franklin, Lancaster, and York Counties experienced the biggest percentage income gains between the two reference periods. In Adams and Lebanon Counties, the second highest income households experienced the biggest gains. In Franklin, Lancaster, Lebanon, and York Counties, the lowest quintile income experienced the lowest gains ([Table 10](#)).

Median Household Income by Race and Ethnicity

There are large income disparities by race and ethnicity in Franklin, Lancaster, Lebanon, and York Counties, with Black and Latino households having much lower median income levels than White households. In Lebanon County, median income for White and Latino households has increased between the two reference periods, while Black households' median income has decreased ([Table 11](#)).

Poverty

In Adams, Franklin, and Lancaster Counties, poverty rates have slightly decreased for all people; in Lebanon County, poverty has increased (+0.6%) and in York County it has stayed the same. Poverty for Black individuals has increased in Adams county (+4.7) while it has decreased for White individuals (-0.2%) ([Table 12](#)).

Households with Supplemental Benefits in the Past 12 Months

The number of households in all five counties that receive supplemental benefits, which include food stamps/SNAP, cash public assistance, and supplemental security income, has increased ([Table 13](#)).

Per-Capita Income

Even accounting for inflation, per-capita income has increased in all five counties. Income is highest in York (out of the five counties) ([Table 14](#)).

D. Employment Statistics

Employment Status of the Population 16 Years and Older

Over the past 5 years, the rate of labor force participation has decreased in all five counties. Lancaster County has the highest labor force participation rate of the five counties (66%) ([Table 15](#)).

Means of Transportation to Work

The average length of workers' commutes in all five counties has increased in recent years, with Franklin and Lancaster counties seeing the largest increases. Franklin and Lebanon Counties have experienced a drop in rates of carpooling and walking, which is consistent with the state and the nation. Adams and Lancaster have seen increases in both carpooling and walking, and York has seen an increase in carpooling. All five counties have seen an increase in working from home as have the state and the nation ([Table 16](#)).

Employment by Occupation

Jobs in Adams County have shifted away from sales and have moved to professional, scientific, and management occupations. Jobs in Franklin County have shifted away from sales and moved to transportation/warehousing and production and moving. Jobs in Lancaster County have shifted from sales and moved to management, business, science and art occupations. Jobs in Lebanon County have shifted from sales and moved to transportation and warehousing. Jobs in York have shifted from sales and moved towards management, business, science, and arts occupations ([Table 17](#)).

Employment by Class of Worker

Employment patterns in Adams County have shifted away from self-employment and into private and government jobs. Employment in Franklin County has shifted away from private, self-employed, and unpaid family work into government jobs. Employment in Lancaster County has shifted away from government jobs and into private and self-employed occupations. Employment in Lebanon County has shifted away from government, self-employed, and unpaid family work into private wage jobs. Employment in York County has shifted away from government and into self-employed and unpaid family work ([Table 18](#)).

Employment by Industry Sector Adams County has experienced a shift of employment away from sectors such as manufacturing and into educational services. Franklin County has experienced a shift of employment away from sectors such as construction and into transportation and warehousing. Lancaster County has experienced a shift of employment away from sectors such as manufacturing and into educational services and health care. Lebanon County has experienced a shift of employment away from sectors such as manufacturing and into retail trade. York County has experienced a shift of employment away from sectors such as manufacturing and into health care and social assistance ([Table 19](#)).

E. Education Statistics

Educational Attainment of the 25+ Population

All five counties are experiencing an increase in the educational attainment levels of adults, with Lancaster County seeing the highest increase at +4% ([Table 20](#)).

School Enrollment

The percentages of college-age adults who are enrolled in higher education has declined in Franklin and Lancaster Counties for both men and women; it has declined in Adams County for men, and it has declined significantly for women in Lebanon County (-17%). It has increased in York County for both men and women ([Table 21](#)).

F. Household Statistics

Households by Occupancy

Adams, Franklin Lebanon, and York Counties have all seen an increase in house vacancy rates. Lancaster County has seen a slight decrease in vacancy. Renter occupation has increased in all counties except Adams, where there was a slight decline ([Table 22](#)).

Housing Characteristics

Inflation adjusted median home value has increased in the US, PA, Lancaster, and Lebanon Counties, while it has decreased in York County and remained virtually stagnant in Adams and Franklin Counties. Housing affordability has improved for owners in all five counties, but has only improved for renters in Adams, Franklin, and Lebanon Counties ([Table 23](#)).

Households by Type

Household size has increased in PA, Adams, Franklin, and Lancaster Counties, and has remained virtually stagnant in the U.S., Lebanon, and York County. Shares of single-parent households have increased slightly in all counties except Adams ([Table 24](#)).

G. Children

Health Insurance Coverage for Children under 6 Years of Age

The U.S., PA, Franklin, Lebanon, and York Counties have seen a decrease in health insurance coverage for children under 6 years old. Adams and Lancaster Counties have seen an increase in rates ([Table 25](#)).

Uninsured Population under Age 25

Among the 6-18 age group, rates of being uninsured vary by county – the highest rate of uninsured is 15% in Lancaster, followed by 11% in Franklin and Lebanon Counties; the rate in Adams is 5% and the rate in York County is 4% ([Table 26](#)).

Medicaid Enrollment among Children

Lancaster and York Counties have the highest number of Medicaid enrollees among children at about 40,000. Adams County has the fewest number of enrollees at about 7,000 ([Table 27](#)).

TANF – Children Receiving Aid

All five counties have seen a decrease in children receiving TANF from 2010 to 2019. The largest decrease is in York County (-1.8%) and the smallest decrease is in Adams County (-0.4%) ([Table 28](#)).

SNAP – Children Enrolled

Adams, Lancaster, Lebanon, and York Counties have seen decreases in the population obtaining SNAP benefits, while Franklin County has seen an increase ([Table 29](#)).

CHIP – Children Enrolled

PA and Adams County have seen a decrease in children enrolled in CHIP, while Franklin, Lancaster, Lebanon, and York County have seen increases ([Table 30](#)).

Race & Ethnicity - Children

Over 80% of children in Adams and Franklin counties are non-Hispanic White, compared to about 70% in Lancaster, Lebanon, and York Counties. York County and Adams County have about 14% of children in the Hispanic/Latino race category; Lebanon has about 23%, Lancaster has about 16%, and Franklin County has about 10% ([Table 31](#)).

Obesity - Children and teens overweight or obese

About three in ten teens ages 10 to 17 in Pennsylvania are overweight or obese ([Table 32](#)).

Grades K-12 Screened for BMI by Percentile

Nearly 20% of all students grades K through 12 screened in the 95th percentile or higher for BMI in all five counties. Lancaster County has the lowest rate of K-5 in the category with 15%, and Franklin County has the highest in the 7 through 12 grades with 22% in the 95th percentile or higher category ([Table 33](#)).

Ratio of Pediatricians to Child Population in PA

Pennsylvania has 97 general pediatricians per 100,000 children, compared with 80 in the United States ([Table 34](#)).

Rate of Pediatricians to Child Population by County

Lebanon has the fewest number of pediatricians per 100,000 children with 2; York has the highest with 5, closely followed by Lancaster with 4 ([Table 35](#)).

Children ages 3-4 with access to high-quality pre-k

York County has the lowest number of children with access to high-quality pre-k with 11%, and Lebanon has the highest with 23%. Four of the five counties fall short of PA's average of 23% with access ([Table 36](#)).

Children ages 3-4 below 300% poverty with access to publicly funded, high-quality pre-k

All five counties have fewer children ages 3-4 below 300% poverty with access to publicly funded high-quality pre-k compared to the state (40%). Lebanon County has the highest rate of the five counties with 33%, and York has the lowest at 20% ([Table 37](#)).

Population Shares by Age - Children

The U.S., PA, Adams, Lancaster, and York Counties saw decreases in population 19 and younger (Franklin and Lebanon Counties showed decreases in all age groups with the exception of 10-14 in Franklin showing no change; 10-14 in Lebanon increasing by 0.4% and no change in 15-19) ([Table 38](#)).

Population Poverty – Children and Families

Lebanon County has the highest rate of children in poverty (individuals in poverty 18 or younger) with 17%; Franklin County has 15% in poverty; Lancaster and York Counties have 14%; and Adams County has the fewest with 12% of individuals under 18 in poverty. All five counties have fewer children in poverty compared to the state (18%) and the country (19%) ([Table 39](#)).

Households with Children Receiving Food Stamp Benefits

Rates of eligible children receiving food stamps are similar in each of the five counties to that of the state, with the exception of slightly higher rates in Lebanon County (55%). All five counties have seen a decrease in those receiving benefits in the comparison time period ([Table 40](#)).

Students with Limited English Language Proficiency

Adams County has the highest overall average of students with limited English proficiency (6%), followed by York County (5%), then Lebanon County (5%), Lancaster County (5%), and the lowest in Franklin County (2%). The district with the highest percent of students with limited English proficiency is York City School District with 26% ([Table 41](#)).

Students Eligible for Free or Reduced-Price Lunch

Lancaster County has the highest overall average of students eligible for free or reduced school lunch (45%), followed closely by Lebanon County (45%); Franklin County (44%); and York County (43%). Adams County has the fewest students eligible with 37%. Several school districts throughout the five counties have 100% of students eligible for free or reduced-price lunch ([Table 42](#)).

PSSA Math by County

Adams and Lancaster Counties have the highest average PSSA Math scores with 45% scoring proficient or advanced in their districts, followed closely by Franklin County with 44%. Lebanon County has 42% scoring proficient and advanced, and York County has the lowest number with 41%. The Lancaster County school district of Manheim Township has the highest percentage of students scoring proficient or advanced in math with 63% ([Table 43](#)).

PSSA Reading by County

Franklin County leads the five counties in PSSA Reading scores, with 64% of students scoring proficient or advanced on average in the Franklin County school districts. Lancaster County closely follows with 63%; Lebanon and Adams County both score 62% on average. York County trails the other counties with 59% scoring proficient or advanced in reading. Lancaster County's Manheim Township School District again scores highest overall, with 80% of their students scoring proficient or advances in reading ([Table 44](#)).

PSSA Science by County

Adams County school districts lead the other counties with PSSA Science scores – their districts average 73% of students scoring proficient or advanced in science. Franklin County comes second with an average of 69%, closely followed by Lancaster County with 67%. Lebanon County districts average 64% and York County districts score the lowest of the five counties with 63% proficient or advanced in science. Adams County's Gettysburg Montessori CS school scores the highest overall with 85% of students scoring proficient or advanced in PSSA science ([Table 45](#)).

Youth Homelessness

Lancaster County has the highest number of youths identified as homeless with 2,547 in the 2019-20 year. Second among the five counties is York, with 1,899. Lebanon follows with 701, and Franklin and Adams have relatively few homeless youths (233 and 284 respectively) ([Table 46](#)).

WIC

Lancaster County has the highest number of individuals receiving WIC benefits with 6,153 receiving benefits in January 2021. York County follows closely behind with 5,885; Franklin and Lebanon Counties have virtually the same amount of individuals receiving benefits (2,543 and 2,457 respectively), and Adams County has the fewest with 1,390 receiving benefits ([Table 47](#)).

Overview of Survey Findings

Primary data collection, in the form of a telephonic and online survey instrument provided insight on community members' health throughout the region. In total, 1901 interviews were completed (197 Adams, 283 Franklin, 256 Lancaster, 279 Lebanon and 886 York) for the Representative Community Survey. The representative interviews were completed online 36% of the time and telephonically 64% of the time. The Special Population Community Survey was distributed through WellSpan and our local health coalitions' contacts and partners with a focus on hearing from racial ethnic minority groups, low-income individuals living in poverty and families. The survey yielded 1449 respondents- 214 Adams, 488 Franklin, 76 Northern Lancaster County, 105 Lebanon and 562 York.

Regional Health-Related Indicators

Identifying community health needs based on the prevalence of health risks and health disparities emphasizes those health risks that contribute most to the non-communicable diseases that are among the leading causes of death and disability. This approach shows the most significant health risks in southcentral Pennsylvania relate to obesity, including obesity-related behaviors such as diet and exercise, and mental health in terms of both the number of people affected and the amount of death and disability each creates. Preliminary data also show that health care access issues exacerbate these problems and that most of these risk factors are unevenly distributed across demographic groups.

[Table A](#) shows the current distribution of the health-related attitudes, behaviors and experiences of southcentral Pennsylvania adults. Reviewing the overall data shows that access indicators are generally favorable, with most residents reporting they have health care coverage, and a personal physician. Still, more than one in four residents have not seen a dentist or had a routine check-up in the past year, two in five residents experienced stress about money worries and around one in ten skipped medical treatment due to cost in the past year. Many of those with insurance have high deductible health plans, and a sizable number of these plan holders have skipped treatment due to cost in the past year. Behavioral risk indicators show that few residents exercise regularly and far too many residents are overweight or obese. Behavioral indicators also show that about one in seven residents is a current smoker. Finally, nearly two in three residents exhibited some depressive symptoms, two in five say that the COVID pandemic negatively affected their mental health, and one in three experienced at least some stress due to loss of a loved one. Three in ten adults say they have not received any COVID vaccine and, consequently, one in five does not believe that vaccines in general are safe or effective. Transforming these proportions into population totals based on an adult population of about 750,000 within the WellSpan primary service area zip codes shows how many residents are estimated to have experienced these things (Figures [1](#) and [2](#)).

Table A: Proportion of Adults Reporting Attitude, Behavior or Experience for Selected Community Health Needs Assessment Items

Indicator	2022
Did not exercise 30 minutes on five days in past week	81.3
Experienced any symptoms of not getting enough sleep	72.5
BMI: Overweight and Obese	71.6
One or more days with depressive symptoms in past two weeks	64.2
No strength training in past month.....	60.6
Stressed about money worries.....	42.6
At least one day mental health was not good in past month	42.2
At least one day physical health was not good in past month.....	42.2
COVID negatively impacted mental health.....	40.9
Did not participate in physical activities or exercise in past month	36.4
Stressed about recent loss of a loved one.....	35.8
Has not received COVID vaccine	31.5
Has not seen a dentist in past year	28.8
No routine check-up with doctor in past 12 months.....	26.2
Economic hardships (one or more)	26.1
COVID negatively impacted family finances	23.9
Has a high-deductible health plan	21.9
Experienced any trauma symptoms.....	21.7
Used marijuana one or more days in past month	17.9
Does not believe vaccines are generally safe and effective.....	17.9

Table A: Proportion of Adults Reporting Attitude, Behavior or Experience for Selected Community Health Needs Assessment Items (Con't)

Indicator	2022
Needs help reading health materials at least occasionally	16.5
Poor or fair health.....	15.2
Does not have a personal physician	13.7
Binge drinking behavior.....	13.3
Adult smoking (% current smokers).....	12.7
Experienced a reduction in pay.....	12.3
Does not get needed social and emotional support.....	10.7
Ate fast food three or more days in past week	9.9
Uninsured (% of pop. under age 65 without health insurance).....	9.8
No health insurance any time during past year (ages 18 - 64).....	9.8
Experienced any unfair treatment b/c of race, ethnicity or cultural background	9.7
PHQ-8 current depression indicator-currently depressed	8.8
Skipped or reduced meals	8.8
Did not receive health care in past year because of cost	6.9
Fell behind paying rent or mortgage	4.2
Adult e-cigarette vaping (% current vapers).....	3.6
Used illegal drugs in past year	3.6
Did not receive health care because of a lack of transportation.....	2.5

Survey Findings Figures

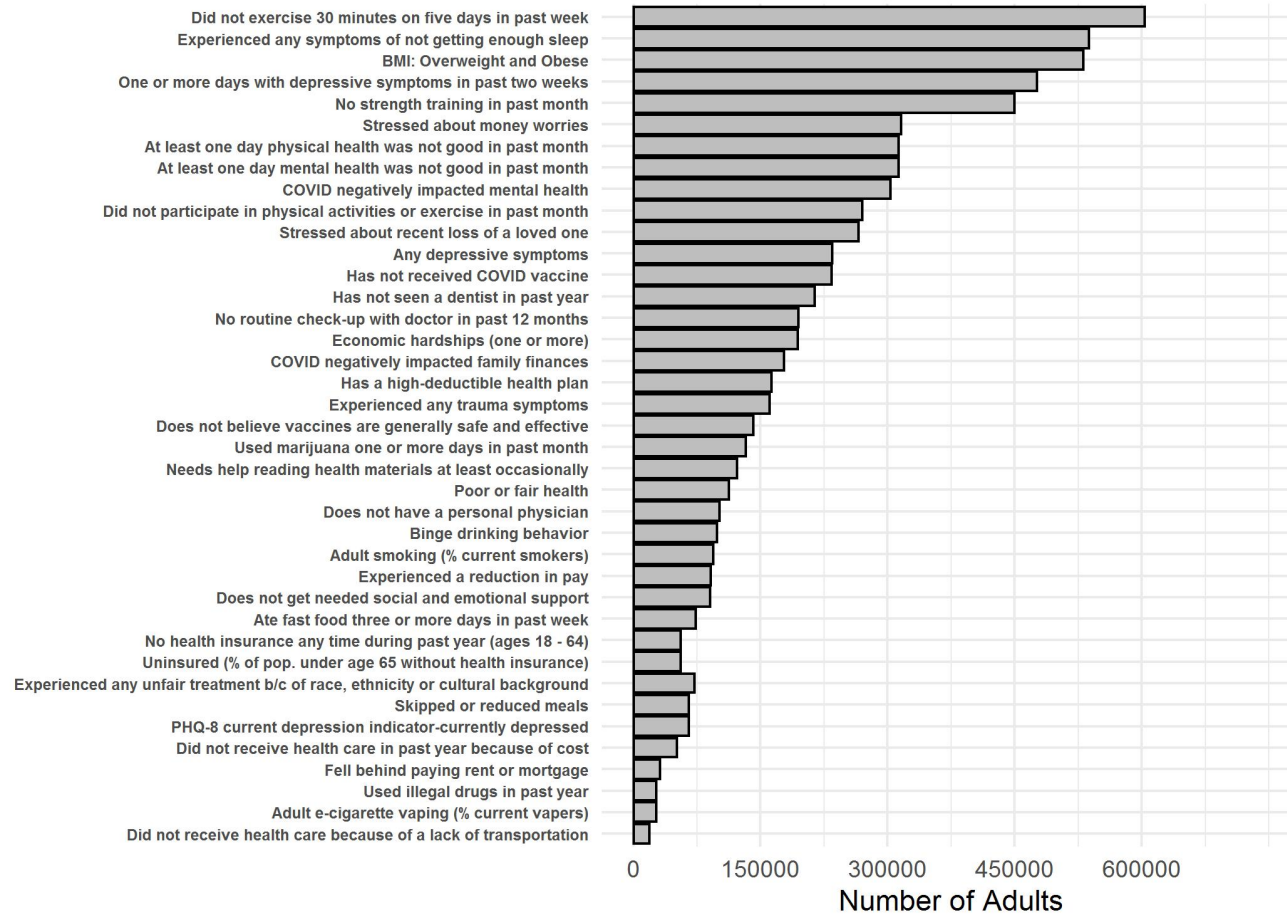

Figure 1. Estimated Number of Adults Reporting Attitude, Behavior, or Experience, WellSpan Primary Service Area, 2022. Note: Adult population is 742,332 and the 18 – 64 population is 567,803. The error margin for these estimates is plus or minus 23,755 persons.

Figure 2. Estimated Number of Adults Reporting Attitude, Behavior, or Experience, WellSpan Primary Service Area, 2022. Topics estimated to affect 250,000 or more adult residents.

COVID-Related Indicators

In addition to the indicators discussed in [Table A](#) that represent data gathered during a typical community health needs assessment process, the circumstances created by the COVID-19 epidemic necessitated a closer look at indicators that might reflect residents' experiences during the pandemic. [Table B](#) shows that the pandemic's primary impact was on residents' mental well-being. Nearly half (44%) of respondents said that the COVID outbreak negatively impacted their mental health, which was the most often reported COVID impact in every county. One in five (21%) respondents reported that their family finances were negatively impacted. COVID impacts on mental health and family finances are higher in Franklin and York Counties.

Table B. Effects of COVID-19 Outbreak by County

Do you agree or disagree with the following statements?

	Total Agree	Adams	Franklin	Lancaster*	Lebanon	York
The COVID-19 outbreak has impacted my mental health in a negative way.	44%	39%	44%	37%	36%	43%
It has been difficult for me to get the things I need due to the COVID-19 outbreak.	37%	35%	36%	30%	35%	35%
The COVID-19 outbreak has impacted my family's finances in a negative way.	21%	21%	29%	23%	15%	26%
The loss of a family member to COVID hurt my personal well-being.	10%	9%	15%	8%	16%	14%
The loss of a family member to COVID hurt my household finances.	2%	8%	4%	1%	2%	2%

*Representing WellSpan's footprint, largely concentrated in northern Lancaster County.

Stressors

To better contextualize the mental health and financial strains created by the COVID epidemic, the survey gathered data about life stressors and financial hardships experienced in the year prior to the survey. A majority of survey respondents said they had experienced at least some stress from feeling overloaded or from family problems and more than two in five experienced some stress from work problems or money worries. These feelings were similar in every county.

Table C. How much of a hassle were the following things for you – did they cause no stress, some stress, moderate stress, or severe stress for you during the past 12 months?

	Some, Moderate, or Severe stress
Feeling generally “overloaded”	63%
Problems related to family.....	57%
Work or job problems	47%
Money worries like paying bills	43%
Recent loss of a loved one	35%
Problems with your friends.....	22%
Having to move, either recently or in the future	20%
Worries about food, shelter, health care, and transportation	16%
Crime or safety in your neighborhood.....	11%
Sexual, emotional, or physical abuse.....	8%
Problems with alcohol or drugs.....	4%

Economic Hardships

Economic factors, detailed in [Table D](#), contribute to the social determinants of health and may affect a person's access to healthcare. The share of respondents who reported at least one economic hardship (26% as reported in [Table 1](#)), was significantly lower than the proportion who were stressed about money worries (43% as reported in [Table C](#)). While experiencing an economic hardship is somewhat common, experiencing any one specific hardship is less common. One in ten respondents had experienced a reduction in pay or skipped or reduced meals in the past year, which were the most common hardships. Housing problems, either evictions or having to live temporarily in a shelter or with others, were reported by few respondents.

Data presented previously ([see Table 1](#)) shows that the proportion of respondents experiencing at least one economic hardship is similar in every county and is also lower in every county compared to the prior needs assessment. The expected financial disruptions created by COVID-19, and recent reporting about rapid inflation, including the hardships it is creating, could cause some to speculate that economic hardships are underreported in this assessment. Despite expectations that recent events should be driving increased economic hardships, the government's COVID-19 safety net policies had a positive effect on household finances, particularly for lower income households. The University of Michigan reports that,

In sum, though inflation remains of great concern to the American public, data indicate the economic and financial gains made by American households during the pandemic persisted through the end of 2021, despite rising prices. This is particularly true for low-income U.S. households. It is for this reason we argue that any discussion of inflation must be brought into conversation with, and balanced by, the historic success of the economic recovery, which has placed so many U.S. households in a strong financial position. This further means it will be important to track indicators of financial well-being and material hardship as the nation gets further away from pandemic safety net policies.^{iv}

Table D. The following questions are about several factors that can affect a person's health. Did any of the following hardships happen to you in the last 12 months?

	Total Agree	Adams	Franklin	Lancaster*	Lebanon	York
Did you experience a reduction in pay for any reason?	12%	10%	12%	16%	9%	13%
Did you skip or reduce your meals?	9%	7%	8%	10%	5%	11%
Were you unemployed and looking for work for as long as a month?	7%	8%	6%	3%	7%	9%
Did you lack health insurance coverage?	7%	10%	7%	8%	7%	7%
Were you unable to get needed medical care because you couldn't afford it?	4%	1%	4%	2%	4%	6%
Were you worried that your food would run out before you got money to buy more?	5%	2%	4%	2%	3%	8%
Were you unable to get any needed prescription medications because you couldn't afford it?	4%	5%	4%	2%	1%	5%
Did you fall behind in paying your rent or mortgage?	4%	3%	6%	3%	2%	5%
Were you unable to purchase needed food because you couldn't afford it?	4%	1%	3%	1%	1%	5%

*Representing WellSpan's footprint, largely concentrated in northern Lancaster County.

Identified Health Disparities

Public health researchers frequently attribute persistent patterns of health disparities, i.e., gaps in access, conditions, or behaviors that are larger for some demographic groups than for others, to a set of social determinants. These social determinants can include not only demographic attributes but also psychosocial stressors, such as discrimination and trauma. Social determinants thinking suggests that health is determined by access to social and economic opportunities that arise from the places where we learn, live, play and work. According to the Centers for Disease Control (CDC), “The conditions in which we live explain in part why some Americans are healthier than others and why Americans more generally are not as healthy as they could be.” As such, the CDC has established a set of indicators that can track progress towards a goal of creating social and physical environments that promote good health for all people.

[Table E](#) displays the relationships that exist between each survey indicator and demographic information such as poverty status, race and ethnicity, gender, age, and county, and psychosocial determinants such as depression, trauma experiences, and discrimination. The color coding identifies whether there is a significant relationship between each indicator and each subgroup and how strong those differences are; the darkest coloring indicates the strongest associations.

The area’s health disparities, generally speaking, show clear patterns. Age is significantly associated with differential outcomes related to many indicators. Older residents are more likely to have better access to healthcare and have better rates on most prevention-related indicators, although they are also more likely to have specific health conditions. Younger residents are more likely to drink, use illegal drugs, and smoke (cigarettes and e-cigarettes). Race and ethnicity is also significantly associated with differential outcomes related to access, conditions, and prevention behaviors. Poverty is significantly associated with differential outcomes related to access, behaviors, conditions, and prevention. There are few notable differences by gender or county.

[Table E](#) also shows the overwhelming disparities that relate to psychosocial indicators related to depression, trauma experiences, and discrimination. These experiences produce some of the strongest disparities across most types of indicators. In most cases, these psychosocial attributes result in greater disparities for more indicators than any of the demographic characteristics, although it is essential to note that some groups are more likely to report these experiences.

Table E. Demographic and Psychosocial Associations to Health Indicators

Indicator	Poverty	Race/ Ethnicity	Gender	Age	County	Depression	Trauma Experience	Unfair Treatment
Did not receive health care because of a lack of transportation								
Adult e-cigarette vaping (% current vapers)								
Used illegal drugs in past year								
Fell behind paying rent or mortgage								
Did not receive health care in past year because of cost								
PHQ-8 current depression indicator-currently depressed								
Skipped or reduced meals								
Experienced any unfair treatment b/c of race, ethnicity or cultural background								
Uninsured (% of pop. under age 65 without health insurance)								
No health insurance any time during past year (ages 18 - 64)								
Ate fast food three or more days in past week								
Does not get needed social and emotional support								
Experienced a reduction in pay								
Adult smoking (% current smokers)								
Binge drinking behavior								
Does not have a personal physician								
Poor or fair health								
Needs help reading health materials at least occasionally								
Used marijuana one or more days in past month								
Does not believe vaccines are generally safe and effective								
Experienced any trauma symptoms								
Has a high-deductible health plan								
COVID negatively impacted family finances								
Economic hardships (one or more)								
No routine check-up with doctor in past 12 months								
Has not seen a dentist in past year								
Has not received COVID vaccine								
Stressed about recent loss of a loved one								
Did not participate in physical activities or exercise in past month								
COVID negatively impacted mental health								
At least one day mental health was not good in past month								
At least one day physical health was not good in past month								
Stressed about money worries								
No strength training in past month								
One or more days with depressive symptoms in past two weeks								
BMI: Overweight and Obese								
Experienced any symptoms of not getting enough sleep								
Did not exercise 30 minutes on five days in past week								

DEFINITIONS:

Poverty:

a. Above poverty level (n=1,818) b. Below poverty level (n=79) (determined by household size and poverty guidelines based on the Census)

Race/Ethnicity:

a. Non-Hispanic White (n=1,712) b. Non-Hispanic Black (n=39) c. Non-Hispanic (n=64) Other d. Hispanic (n=87)

Gender:

a. Male (n=895) b. Female (n=994)

Age:

a. 65 and older (n=539) b. 64 and younger (n=1362)

Depression:

a. PHQ8 Current depression indicator - currently depressed (n=167); b. No current depression (n=1,734)

Trauma experience:

a. One or more trauma experiences (n=412) b. No trauma experience (n=1,489)

Unfair treatment:

a. One or more experiences of unfair treatment (n=185); b. No unfair treatment (n=1,716)

No significant difference	p. > .05
Significantly different, weak association	p. < .05, sresid < 3
Significantly different, moderate association	p. < .05, sresid > 3
Significantly different, strong association	p. < .05, sresid > 4

Partner/ Special Population Survey Findings

The Special Population Community Survey was distributed through a grassroots effort across the five-county geographic region. Most significantly, our social service agencies, community-based organizations and local non-profit partners were instrumental in distributing the survey to their client and mailing list contacts. The survey yielded 1,445 results, with 15% coming from Adams County, 34% from Franklin County, 7% from Lebanon County, 5% from Lancaster County and 39% from York County. Though the sample size was significant, the sample did not necessarily aim to mirror the demographics of the communities- the goal of the Special Population Community Survey was to provide an opportunity beyond the representative survey methodology to collect the responses of diverse populations within our community to better understand their health.

When comparing racial ethnic minorities in the representative Community Survey with the Special Population Community Survey, respondents from the Special Population Community Survey are in a much more difficult financial position, with more than half (53%) experiencing at least one economic hardship. This may be explained by their engagement in the community or social service agency that distributed the survey. Additionally, one in seven racial ethnic minority respondents (14%) avoided healthcare because of transportation problems compared to 3.5% of racial ethnic minorities included in the representative Community Survey and 2.0% of all respondents of the Community Survey. Racial ethnic minorities who engaged in the Special Populations Survey were more likely to have a routine medical visit, a personal physician, and COVID-19 vaccinations but were also more likely to avoid care because of the cost, be uninsured, and report poor mental and physical health. Additionally, racial ethnic minorities in the Special Population Survey seem to report some positive health related behaviors (less smoking, vaping, illegal drug use), but are struggling with mental health (twice as likely to be currently depressed, less likely to have social supports), literacy, and discrimination.

Similar trends are observed when comparing the Community Survey respondents overall with the Special Population Survey respondents, though the patterns are less pronounced. Not surprisingly, this data demonstrates that individuals currently seeking services and support from local social service providers are more likely to demonstrate economic hardship than randomly selected respondents in our community. Negative health outcomes are often attributed to those with more economic hardships, a correlation that is also observed here. This reinforces the need to address social determinants of health barriers to overcome health disparities.

Indicator	All Races, Ethnicities		Non-White Races , Ethnicities	
	Community Survey	Special Population Survey	Community Survey	Population Survey
Did not receive health care because of a lack of transportation	2.5	7.4	3.5	13.8
Adult e-cigarette vaping (% current vapers)	3.6	4.7	9.2	8.0
Used illegal drugs in past year	3.6	2.7	10.8	7.1
Fell behind paying rent or mortgage	4.2	9.2	9.9	20.0
Did not receive health care in past year because of cost	6.9	8.3	0.7	18.1
PHQ-8 current depression indicator-currently depressed	8.8	18.1	13.1	24.1
Skipped or reduced meals	8.8	19.3	13.3	26.7
Experienced any unfair treatment b/c of race, ethnicity or cultural background	9.7	12.0	33.8	45.8
Uninsured (% of pop. under age 65 without health insurance)	9.8	3.3	9.2	15.6
No health insurance any time during past year (ages 18 - 64)	9.8	7.3	14.9	21.3
Ate fast food three or more days in past week	9.9	11.8	10.9	21.2
Does not get needed social and emotional support	10.7	14.4	15.9	27.7
Experienced a reduction in pay	12.3	14.1	20.7	24.4
Adult smoking (% current smokers)	12.7	9.1	18.2	5.7

Experienced any symptoms of not getting enough sleep	72.5	48.7	77.6	53.9
Did not exercise 30 minutes on five days in past week	81.3	85.4	84.2	90.8

Provider Survey Executive Summary

WellSpan incorporated the voice of our physicians/APPs in the 2022 Community Health Needs Assessment in the form of a survey to our clinical providers. The survey, co-developed with several physician champions and medical residents, collected feedback about community health issues they are observing in clinical care. A total of 604 physicians/APPs (30% response rate) responded to the survey conducted from 12/09/21 – 02/28/22. Respondents were a diverse group, varying in specialty, practice setting, county of practice, years of practice, and race/ethnicity.

Overall, the survey expressed solid alignment between what our physicians/APPs perceived as top health issues and the priorities identified through broader secondary and primary data collection. For example, the top three health issues that our physicians/APPs were concerned about and believe WellSpan should prioritize for the well-being of our community include: Mental / Behavioral Health, Health Behaviors / Lifestyle, and Healthcare Access.

Our physicians/APPs see firsthand the huge impact COVID -19 has had on community health issues. Mental / Behavioral Health was the leading issue they indicated being impacted with health behaviors and increase in chronic disease also significant. Related to mental health, they indicated that the majority of their patients, teams, family, friends and patients were feeling grief, loss, and burnout associated or amplified from COVID. Physicians/APPs shared that 73%-76% of them, their practice teams, and family/friends suffer from a moderate amount to great deal of grief, loss and burnout with 99% of each of these groups feeling this to at least a fair amount.

Health equity is a strategic focus and the primary theme that spans all aspects of the community health needs assessment and improvement plan framework. Our physicians/APPs recognize that certain disparities and inequities affect patients based on a number of attributes. The survey indicated that our providers don't perceive any one patient attribute as a primary source of disparity / inequity with almost equal distribution when asked to rank patient attributes where WellSpan should prioritize action. "Income" ranked highest at 21% and "Gender" ranked lowest at 18%, with all other attributes ("Race/Ethnicity", "Age", and "Geography/Where someone lives") ranked at 20%. When asked if there were specific groups disproportionately affected by health inequities, responses varied significantly with a majority referencing some version of "low income/poverty".

This survey will be used as a component in our community health needs assessment data collection, the full survey results will be shared with clinical leadership as they craft strategies related to physician and APP engagement, support, and retention.

WellSpan Provider Survey Highlights

Noteworthy findings in provider survey responses include:

- Top 3 community health issues are Mental / Behavioral Health, Health Behaviors / Lifestyle, and Healthcare Access.
- Mental/Behavioral Health is leading issue impacted by COVID-19 with many commenting that access to behavioral health care is inadequate.
- Approx. 75% of our providers, practice teams, and providers' loved ones suffer from a moderate to great deal of grief, loss and burnout related to the pandemic
- 26% of physicians/APPs indicate "TIME" prevents them from responding to patients' social determinants of health challenges

Common themes in open-ended responses:

- Staffing challenges were exacerbated by COVID-19
- Providers expressed desire for care coordination roles be more readily available to their teams to meet the needs of patients

Potential opportunities to support physicians/APPs in alignment with our community health priorities:

- Expanded screening for depression in primary care settings
- Enhanced availability of mental well-being resources
- Evolution of the Ambulatory Case Management Hub model improvement.

Conclusion

There are many health issues facing the community, ranging from environmental health and air quality to health behaviors such as exercising. Moving forward, the next chapter of this work becomes the orchestration and coordination of community and organizational plans to address the identified needs. To do that, there will be a need to focus on topics that affect large numbers of community members and to prioritize those topics that are ripe for action. The engagement of a multitude of partners will be instrumental in addressing the needs of the community as well. WellSpan looks forward to advancing the learnings of this assessment and translating the identified into action.

Acknowledgements

The 2022 Community Health Needs Assessment was conducted at a pivotal time, from the fall of 2021 to the spring of 2022. It captured ongoing health trends while also exploring the complexities of living during a pandemic. The Center for Opinion Research at Franklin & Marshall College in Lancaster, Pennsylvania is WellSpan's consultant in this work- leading the data collection, analysis and reporting. WellSpan wishes to express its gratitude to the Center for Opinion Research's Director Berwood Yost and Project and Data Specialist Scottie Thompson Buckland for their tireless efforts to complete the assessment.

Additionally, the health coalitions across the region, including Healthy Adams County, Healthy Franklin County, Healthy York, the Northern Lancaster County Hub and the Community Health Council of Lebanon County have been instrumental in the completion of this Community Health Needs Assessment. The coalition leaders have been actively engaged throughout the process and have provided expertise and guidance while also ensuring their leadership and community partners are heard and engaged in the needs assessment process.

As we have reimaged our needs assessment process, the engagement of our WellSpan leaders, Boards, physicians and advanced practice providers and subject matter experts has been pertinent to the success of our Community Health Needs Assessment. Despite the enormity of the pandemic response which coincided with this process, our leaders, Boards, physicians and APPs, and subject matter experts consistently prioritized this work and remained focused on the tremendous commitment WellSpan has to the community and its health.

Lastly, WellSpan wishes to thank our community. Without participation from our community in the primary data collection survey, this assessment would not be possible. Our community partners remain invaluable messengers and have demonstrated the value of collaboration time and time again.

Thank you for the support and engagement.

¹Infectious diseases are caused by pathogenic microorganisms, such as bacteria, viruses, parasites or fungi; the diseases can be spread, directly or indirectly, from one person to another. Zoonotic diseases are infectious diseases of animals that can cause disease when transmitted to humans. Noncommunicable diseases (NCDs), also known as chronic diseases, are not passed from person to person. They are of long duration and generally slow progression.

The four main types of noncommunicable diseases are cardiovascular diseases (like heart attacks and stroke), cancers, chronic respiratory diseases (such as chronic obstructive pulmonary disease and asthma) and diabetes. (WHO definitions)

Table 46: Education for Children and Youth Experiencing Homelessness Program 2019-2020 Counts by County

Region	County	Where Attributed	Where Identified
2	Lancaster	2,547	2,610
2	Lebanon	701	727
3	Adams	233	237
3	Franklin	284	289
3	York	1,889	1,942
	STATE TOTALS	37,890	38,899

For the 2019-20 program year, education and community agencies identified 37,930 children and youth experiencing homelessness served by Pennsylvania's Education for Children and Youth Experiencing Homelessness (ECYEH) Program (unique, unduplicated count). The population includes children under the age of five and youth enrolled in prekindergarten through grade 12.

The 'where attributed' (unique) count is based on where the child or youth was identified as homeless and attributed to the local education agency (LEA) (i.e., school district, comprehensive technical school, or charter/cyber charter school) or entity (i.e., shelter, non-LEA Early Intervention, prekindergarten program, non-LEA private school/institution). Attribution is based on the LEA that the child or youth was identified by or enrolled in the longest. The unique count is used for state education agency (SEA) EDFacts reporting.

The 'where identified' (duplicate) count includes anywhere the child or youth was identified as homeless; children or youth may be identified in more than one LEA or by more than one entity. Children and youth identified by multiple entities are only reported with their LEA(s), as applicable. Children and youth reported with a non-LEA were only identified by that entity. The duplicate count is used for LEA EDFacts reporting.

Counts of 10 or fewer are indicated by *. These * counts are included in total counts. These counts should not be interpreted as necessarily representing all children and youth experiencing homelessness. Non-LEA entities report only if they receive direct or indirect services from the ECYEH Program.

Appendix 2- Marginal Frequency Reports

The Marginal Frequency Report demonstrates the weighted responses from the Community Survey interviews conducted by the Center for Opinion Research at Franklin and Marshall College. These responses are reflective of the statistically significant sample sizes for the five-county region. In Lancaster County, the responses are representative of WellSpan's footprint, which is largely concentrated in northern Lancaster County (*). In some instances, the sample sizes are too small to draw general conclusions about the health of the community. The previous report provides the interpretation and key findings of this data and should be used along with this data, rather than this report being used out of context. To fully understand the health needs of Adams, Franklin, Lancaster, Lebanon and York counties, multiple data sources (including this primary data collection instrument) should be considered.

	weighted	Unweighted
Adams	n=197	n=323
Franklin	n=283	n=321
Lancaster*	n=256	n=344

Rarely	12%	11%	6%	32%	23%	20%
Never	85%	69%	80%	63%	67%	70%

E1. An eviction is when your landlord forces you to move when you don't want to. A landlord might force you to move because you didn't pay your rent, because you damaged the property, or for any number of other reasons. Sometimes a landlord gives you a paper, or tapes a paper to your door, saying you have to move. Sometimes you go to court; other times you don't. Whatever the case, an eviction happens when you move out because a landlord makes you. Were you, or a person you were staying with evicted from a place in the last two years?

	Adams	Franklin	Lancaster	Lebanon	York	Total
Yes	0%	1%	1%	1%	0%	1%
No	100%	99%	99%	99%	100%	99%
Do not know	0%	0%	1%	0%	0%	0%
