

Texas Health Resources is one of the largest faith-based nonprofit health systems in the United States and the largest in North Texas in terms of inpatients and outpatients served.

They serve North Texas through Texas Health Physicians Group, hospitals, outpatient facilities, Neighborhood Care & Wellness Centers, home health and preventive and fitness services.

## Bringing Purposeful Commerce to Life

Initially Texas Health Resources didn't incorporate eCommerce functionality into their website, making this a novel solution. Leveraging our extensive eCommerce expertise and previous success in implementing OrderCloud, Texas Health Resources partnered with XCentium to integrate eCommerce into their technology infrastructure.

The new solution enabled users to donate to a specific cause or event hosted by Texas Health Resources, with the option to choose from preset donation amounts or specify their preferred donation amount. It also offered additional functionalities like one-time payments, recurring contributions, or pledge donations.

## Empowering Success Beyond Launch

We integrated Authorize.net as a payment gateway that empowered Texas Health Resources to accept credit card payments as well as Google Pay and PayPal. Following the launch, we provided hypercare support.

Business users had the capability to generate reports on orders placed through customized admin portals.

## Project Highlights

- Support for donations
- Online Ticketing Purchase
- Ability to build order reports
