

XBlog 2.0

Our innovative Web Publishing and Editing Modules are designed to seamlessly integrate with Sitecore Content Hub, Sitecore XM, and other Content Management Systems (CMS). These module have been built using the latest and greatest technologies, including Next.js/React, TypeScript, and GraphQL, to provide top speed/performance, and a modern and seamless user experience on mobile and desktop platforms, even over slow connections.

Modules Overview

Our offering consists of two modules, which can be used standalone or integrated into larger web solutions:

Public Head Module

Serves as a "head" for your CMS solution, communicating via GraphQL and/or REST APIs. You can now leverage the power of headless CMS, where the front-end is decoupled from the back-end, allowing for greater flexibility and scalability.

Features:

- **Optimized for Speed & Scalability:** Leveraging Next.js and React to support features like server-side rendering, static site generation, automatic code splitting, and built-in image optimization, SPA.
- **Content Generation:** This feature pre-renders pages at build time and updates them as needed at runtime, meaning your content is ready to serve instantly, leading to faster load times and better user experience.
- **Image Optimization:** Our module automatically optimizes images, reducing file sizes without compromising quality. This means faster load times and less data usage for your users.
- **Works with any Content Source:** Low-to-no-code modifications where content can be saved in most CMS, Database, file, blob storage etc. Backend API integrations secured behind reverse proxy.
- **Built for Modern Hosting/Delivery platforms:** Designed to be used with leading hosting providers like Vercel, Netlify, Sitecore XM Cloud, etc. On prem hosting and running part of your larger solution is also supported.

Editing Module

Designed for authoring and editing of public content, which can be blogs, press releases, marketing materials, product pages, and more. Our module focuses on speed and performance optimization as well as flexibility where it can be used with a large variety of content types and sources.

Features:

- **Works with any Content Source:** Low-to-no-code modifications where content can be saved in most CMS, Database, file, blob storage etc.
- **Media Management:** Uploading media assets, such as images and files into your DAM/CMS. Also support for Azure blobs, file and database storage can be added if needed.
- **Built-in Authentication & Authorization:** Leveraging NextAuth.js to support most common SSO providers, such as Azure AD, Sitecore Identity, Google, Auth0, Apple, and many more.
- **Inline Markdown Editing and Preview:** WYSIWYG editor allows to author, edit, and preview markdown content.
- **Managing and Embedding media and reference metadata with content.**
